• The removal of *C. difficile* spores from healthcare environments is an important aspect of the control of CDIs.
• Range of products available with proven activity against *C. difficile* spores.
• Little information on how to use these products.
• Wipes/wiping are a common method for the application of products to surfaces.
• Range of products tested against surfaces contaminated with *C. difficile* spores.
• Wipes and Microfibre + liquid products

**The Surface Disinfection Efficiency of Sporicidal Products**

- 3m section of bench contaminated with *C. difficile* spores
- Bench wiped in a systematic manner
- Reduction in spores calculated per unit area

**Impact of Low Level Disinfection**

- Log Reduction vs. Area (m²)

**Removal of *C. difficile* spores**

- 3m Peracetic Acid Wipes
- 750 ppm Peracetic Acid
- 100 ppm Chlorine Dioxide
- Peracetic Acid Wipes

**Test Surface with sampling grid**

Dr Paul Humphreys, Sally Pilling, Hygiene and Disinfection Centre, University of Huddersfield. p.n.humphreys@hud.ac.uk
