Techniques for Electronic Resource Management (TERMS): From Coping to Best Practices
Introducing TERMS

- Librarians and information specialists have been finding ways to manage electronic resources for over a decade now. However, much of this work has been an ad hoc and learn-as-you-go process.

- The literature on electronic resource management is segmented into many different areas of traditional librarian roles within the library.

- Techniques in Electronic Resource Management (TERMS) is an attempt to create an on-going and continually developing set of management best practices for electronic resource management in libraries.
Needs assessment

- **Collection development**
  
  “Over half of the libraries tried to address ER [Electronic Resources] in some way. However, most policies contain traditional language with a section on library ER inserted into the latter portion of the document”

  *Mangrum and Mary Ellen Pozzebon (2012)*

  “a lack of established policies and procedures for assessment puts a library at risk for financial loss…”

  *Thomas (2012)*

  “Many procedures are not documented and rely on informal channels of communication”

  *Adlington (2006)*
Needs assessment

- **ERMs and workflows**
  “less like a silver bullet and more that a round of buckshot.”
  
  **Collins and Grogg (2011)**

  “[o]ver a third of librarians surveyed prioritized workflow or communications management, and they called it one of the biggest deficiencies (and disappointments) of ERMS functionality.”

  **Collins and Grogg (2011)**

  “rethinking e-resources workflows and developing practical tools to streamline and enhance various inelegant processes have become the priorities.”

  **Han and Kerns (2011)**
