**Insufficient evidence for psycho-social interventions overall**

Contingency Management is effective in improving treatment retention and transiently reducing illicit drug use in pregnant women. Insufficient evidence to support the use of Motivational Interviewing.

**Generalisability:**

> 90% of all study participants were poor, African American, unemployed, with extremely limited contact with services.

**No evidence**

No studies, not applicable

**Insufficient evidence to recommend one treatment over another.**

Small sample sizes, possibility of Type II error

Assessment of...
