• The removal of *C. difficile* spores from healthcare environments is an important aspect of the control of CDIs.
• Range of products available with proven activity against *C. difficile* spores.
• High level disinfection required to generate a significant reduction in spores dried to surfaces.
• Microfibre + sporicides can reduce levels of environmental *C. difficile* contamination.

**The Surface Disinfection Efficiency of Sporicidal Products**

- Range of products tested against surfaces contaminated with *C. difficile* spores.
- Wipes and Microfibre + liquid products

**Impact of Low Level Disinfection**

- 750 ppm Peracetic Acid
- 100 ppm Chlorine Dioxide
- Peracetic Acid Wipe

**Removal of *C. difficile* spores**

- 2300 ppm Peracetic Acid
- 750 ppm Peracetic Acid
- 100 ppm Chlorine Dioxide
- Peracetic Acid Wipes
- Water
- 100% Removal

Dr Paul Humphreys, Sally Pilling, Hygiene and Disinfection Centre, University of Huddersfield. p.n.humphreys@hud.ac.uk
