CAQDAS teaching in the UK

Graham R Gibbs

University of Huddersfield
Growth in research use of CAQDAS

The number of refereed papers published using qualitative methods that used CAQDAS, 1983-2011. (Original to the author.)

So what is the situation in teaching?
Surveys of QDA teachers

- Using Bristol Online Survey, April 15th to May 12th 2013,
  - N=115
  - Of which 90% British, 4% other EU.
  - 2 from USA
  - Data from this study unless stated.

- Using BOS, January 2011
  - N = 94
  - UK – 39%, USA – 37%, other Europe – 12%
### Disciplines represented

<table>

BUT N.B. for 2013, 19 sociologists across approx. 160 institutions must mean about 6% response rate (assuming 2 qualitative sociology teachers per institution).
Methods taught

- Over 42 different methods mentioned. Most mentioned several
- Over 2/3 mentioned: Interviews and Case Studies
- Over half mentioned: **Mixed Methods**/Participant Observation/Grounded Theory/ Ethnography
- Substantial minority mentioned:
  - Narrative/Action Research/Thematic Analysis/Discourse Analysis/Document use/Comparative Analysis/Life History/Biographical/Participatory/Phenomenology/Feminist/Vide/Conversation Analysis
- Qual Res very diverse. No dominant method.

*2011 Survey. Used by > 75% in discipline*
Case study methods most popular in business, management and criminology.

Ethnography most commonly taught in sociology, health related areas and criminology.

Feminist methods were rarely mentioned except in sociology.

Grounded theory most commonly taught in health related areas.

PO rare in business studies but commonly taught in sociology.

Phenomenology commonly taught in health related areas but rare in other disciplines.

Picture of diversity. No approaches were taught by all respondents.

Very few that taught by all respondents from the same discipline.
## Teaching to undergraduates

</tr>
</tbody>
</table>
Main Barriers to CAQDAS/text analysis in general

- **Time** (mentioned by 21)

  - Too little time to cover qualitative methods in general - there is a 5 week lab and that’s it.
  - Hardly any time to spend on qual in syllabus as it is, so core teaching focuses on qual fundamentals.
  - Time constraints do not allow attention to statistical analyses.
Main Barriers to CAQDAS/text analysis in general

- Teachers lack expertise (mentioned by 15)
  - Lack of staff expertise and confidence.
  - Limited number of staff have used mixed methods in large projects so limited experience of other than content analysis techniques using basic frequency counts.
  - A lack of experienced tutors to support the teaching.
Main Barriers to CAQDAS/text analysis in general

- **Philosophical divide** (mentioned by 8)

I see these as significantly different methods. I want my undergrads to understand the ontological differences, before we support them in considering mixed methods.

Some people object to quantitizing qualitative data.
Main Barriers to CAQDAS/text analysis in general

- **Quants dominate** (mentioned by 4)
  
  They already get three years of quantitative! The qualitative is usually crammed into one or two lectures, so they need to be dedicated purely to qualitative.

- **Student Fear of Numbers** (mentioned by 6)
  
  Generally speaking students don’t like language of numbers :-(
69% had used quantitative approaches to assist with the qualitative analysis of data or with reporting its results in their own work.

Lots of use of available digital resources
Interviews

- Depth interviews
- 45 mins to 1.5 hours
- selected number of survey respondents + a number of experts in the software and data mining techniques and book authors
Based on teaching experience of interviewees

Identified teaching dilemmas and some best practice in using CAQDAS in teaching u/g QDA.

Here 9 issues highlighted:-
1. Teach QDA then CAQDAS?

- Teach QDA on paper then teach CAQDAS
- Or
- Teach QDA as part of teaching CAQDAS
- Some students good at CAQDAS s/w but have superficial analysis – stay at descriptive level.
- Use stages – first descriptive then force students to develop some analytic/theoretical codes.
2. A priori coding or own coding

- Use given coding scheme or let students develop their own coding scheme?
- A priori codes help students get started
- Own codes are more motivating
- Again, try a mixture
3. Code hierarchy or not

- Or other theoretical development of codes
- For undergraduates best left out
- Postgrads need this.
4. Shared data set or own data?

- Strong consensus that better if students collect their own data.
- Students more engaged and better contextual understanding of data.
- But this takes time.
- **Use hybrid data.** Some pre-existing data (high quality basis) and students add some of their own data.
5. Own research questions etc. or not?

- Usually guidance need to create sensible research design and interview schedule.

- **Hybrid solution** – common core of key, shared research questions and interview topics + students can add one or two issues of their own.
6. Who does the teaching

- A few staff do it all. Good for the particular course – good motivation etc.
- But may create increased burden if students want to use CAQDAS in final year project.
- Need for staff development.
7. Students need s/w on their own computer

- Site licence facilitates this

- Other possibilities
  - Use free (limited) versions of s/w
  - Use iPad version for early analysis.
8. Heavyweight texts are intimidating

- Doorstop books like Bryman or Robson.
- Students need shorter, more specific texts and/or guidance on what to read.
9. Students employability

- Some teachers thought skills in CAQDAS use were good for student CV
- Other thought employers not interested or ignorant of s/w
- One possibility = **badging**. Maybe in collaboration with s/w companies.
Conclusions

- Software use in QDA
  - Common at postgrad level (but not ubiquitous)
  - Still uncommon at undergrad level.

- Common reasons
  - Time/space in curriculum
  - Staff expertise

- Good practice

- Hybrids – research question, interviewing, coding
