The ROTOЯ partnership between Huddersfield Art Gallery and the University of Huddersfield was established in 2011. ROTOЯ I and II was a programme of eight exhibitions and accompanying events that commenced in 2012 and was completed in 2013. ROTOЯ continues into 2014 and the programme for 2015 and 2016 is already firmly underway. In brief, the aim of ROTOЯ is to improve the cultural vitality of Kirklees, expand audiences, and provide new ways for people to engage with and understand academic research in contemporary art and design.

Why ROTOЯ, Why Now?

As Vice Chancellors position their institutions’ identities and future trajectories in context to national and international league tables, Professor John Goddard proposes the notion of the ‘civic’ university as a ‘place embedded’ institution; one that is committed to ‘place making’ and which recognises its responsibility to engaging with the public. The civic university has deep institutional connections to different social, cultural and economic spheres within its locality and beyond.

A fundamental question for both the university sector and cultural organisations alike, including local authority, is how the many different articulations of public engagement and cultural leadership which exist can be brought together to form one coherent, common language. It is critical that we reach out and engage the community so we can participate in local issues, impact upon society, help to forge well-being and maintain a robust cultural economy.

Within the lexicon of public centered objectives sits the Arts Council England’s strategic goals, and those of the Arts and Humanities Research Council – in particular its current Cultural Value initiative. What these developments reveal is that art and design education and professional practice, its projected oeuvre as well as its relationship to cultural life and public funding, is now challenged with having to comprehensively audit its usefulness in financially austere times. It was in the wake of these concerns coming to light, and of the 2010 Government Spending Review that ROTOЯ was conceived.

These issues and the discussions surrounding them are not completely new. Research into the social benefits of the arts, for both the individual and the community, was championed by the Community Arts Movement in the 1960s. During the 1980s and ‘90s, John Myerscough and Janet Wolff, amongst others, provided significant debate on the role and value of the arts in the public domain. What these discussions demonstrated was a growing concern that the cultural sector could not, and should not, be understood in terms of economic benefit alone. Thankfully, the value of the relationships between art, education, culture and society is now recognised as being far more complex than the reductive quantification of their market and GDP benefits. Writing in ‘Art School (Propositions for the 21st Century)’, Ernesto Pujol proposes:

‘…it is absolutely crucial that art schools consider their institutional role in support of democracy. The history of creative expression is linked to the history of freedom. There is a link between the state of artistic expression and the state of democracy.’

When we were approached by Huddersfield Art Gallery to work collaboratively on an exhibition programme that could showcase academic staff research, one of our first concerns was to ask the
question, ‘how can we really contribute to cultural leadership within the town?’ The trailblazing project of public engagement that we might undertake within our annual reports or website news are one thing, but what really makes a difference to a town’s cultural identity is a creative scheme run by the local government offices people in their daily life? With these questions in mind we sought a distinctive programme within the municipal gallery space that would introduce academic research in art, design and architecture beyond the university in innovative ways. It was important for ROTOЯ to be consistent with the composition of the school and our academic profession, which resulted in the exhibition of design and architecture, along the more familiar contemporary art exhibitions. With a desire to demonstrate our commitment to research and the School’s portfolio, while presenting work in an accessible and engaging way, ROTOЯ inevitably became selective in its programming.4 Greata Pollock’s essay, included in the review, teases out some of these issues when it asks: ‘Can artists as researchers use the [public] exhibition space as a laboratory for research?’

So what do we mean by ‘research’ in the context of a public centred exhibition programme? ROTOЯ brings together a breadth of research cultures, characterised by epistemological debate on what constitutes knowledge, in addition to, creative practices that focus upon the making, designing and studying of new artefacts and aesthetic experiences. In epistemological terms, ROTOЯ can be described as generating a live tension between explicit, propositional knowledge and tacit intelligence, as well as promoting experiential knowledge and tacit intelligence, as well as promoting experiential knowledge and the critical review of all these claims.

There is an ongoing perception in the UK that STEM (science, technology, engineering and mathematics) subjects demand greater research focus than non-STEM subjects. A functional definition of a good university education is one too readily linked to employment statistics, while the role of design and architecture might respond to the charges taking place in the university sector in the economy, and across society more broadly. It was within this context that we wanted to stimulate a discussion on what we mean by the term design and architecture might directly contribute to societal needs, which question which incorporates an understanding of the cultural value of our work across these subject areas. In addition, we have a prerequisite to make academic research more transparent.

One of the main challenges we found was in aligning our research objectives with those of a municipal gallery. Given that such exhibitions have to be publicly-aware and accessible to all. Through ROTOЯ we perceived these challenges as a positive friction which brought different sensibilities and expectations together towards a joint aim. Therefore, from the outset, the partnership introduced a model for interpreting and accessing each exhibition. These included Gallery staff and University staff working together on exhibition interpretation, a public presentation by each exhibitor during the preview night, reading groups which were formed around each exhibition and a student ambassador programme – to enable students to be trained, briefed and timetabled to give public tours about their tutors’ work. Exhibitions also featured a related film night held in the gallery, as well as educational workshops and bespoken visitor feedback channels.

A key objective for ROTOЯ was to create dialogue and debate with the Gallery’s existing audience, and at the same time develop a new audience, perhaps one from further afield. In the spirit of ROTOЯ we especially welcomed audiences that valued exhibition as a laboratory for research? exhibition space as a laboratory for research. A well-established gallery with a varied, cosmopolitan, exhibition programme as a laboratory for research? such as the Kimsoo, Rollett Assistant Director of Kirklees Communities and Leisure has stated: ‘I think that the partnership has been successful in demonstrating that there’s a potential for really doing something. It’s definitely got me [feeling] very positive [in terms of] thinking “we need to do more of this.”’

Can artists as researchers use the [public] exhibition space as a laboratory for research?

It is widely assumed that a strong cultural infrastructure is a prerequisite to urban regeneration, enabling the revitalisation of communities through cultural engagement, which simultaneously promotes economic prosperity. As a general rule, artists like to live amongst a vibrant arts culture, and a greater concentration of artists and artist-related organisations within a particular locale will lead to higher degrees of arts participation among the local community directly through participatory workshops as well as audience membership. A well-established gallery with a varied cosmopolitan exhibition programme, employing professional staff trained in public engagement is more likely to draw visitors and tourists from outside the region than a local community arts programme that predominantly features local artists. A strong and varied exhibition programme, with a supporting professional infrastructure, will therefore have a greater economic impact to the locale by building social and cultural capital, as well as a sense of community pride and distinct self-image. Research also concludes that public participation in the arts can improve both the physical and psychological well-being of the community.

Herbert Marcuse argued that the role and knowledge of the artist is a complex problem in contemporary society. The more elevated people are from their inner needs, he suggested, the more fragmented they are in relation to the society in which they live and work. Likewise, the more society becomes alienated from the experience of art, the more people may reject it on the grounds of it being too obscure to benefit daily life. This is the artist’s dilemma, a dilemma that still faces art and design education today. Daniel Buren points out: ‘[…] anyone who has the courage and the foolhardiness to show what they have done to others, and in public on top of that, opens the door to analysis, to commentaries, to criticisms and to praise.’

Providing inclusive opportunities for conversation was central to ROTOЯ’s rationale. Pollock notes in her essay: ‘Artistic practice as research takes us through the specificities of a singular practice as means of thinking the world. By means of the jumps that can be made through combination, juxtaposition and transition, the creation of images and the montage of elements, new connections are forged.’

ROTOЯ reflects the multifaceted nature of our intentions, its title at once a palindrome and a metaphor for the idea that the arts are central to urban regeneration, enabling the revitalisation of communities. The title of ROTOЯ thus encapsulates how the growth of individuals with respect to their creative, communal and civic capacities. The title of ROTOЯ thus encapsulates how the growth of individuals with respect to their creative, communal and civic capacities. The title of ROTOЯ thus encapsulates how the growth of individuals with respect to their creative, communal and civic capacities.

ROTOЯ reflects the multifaceted nature of our intentions, its title at once a palindrome and a metaphor for the idea that the arts are central to urban regeneration, enabling the revitalisation of communities.

Continuity and Change

One of the challenges we continue to encounter with ROTOЯ is finding a balance in the programme that enables us to achieve a non-hierarchical, cyclical shape to its conception and form – on how to make new connections so that creative and conceptual work, which is underpinned by academic research, can be accessible and affect a public and their locale.

We related the idea of bringing colleagues’ work to Huddersfield. Much of the art and design work has already been shown in a variety of international arenas or in other national venues within the UK, but it had never been shown collectively in Huddersfield, which is where our practice is carried out. In this respect we wanted the programme to be seen as a critical investment to our students, colleagues and the town in a sense we are bringing the work ‘home’. We imagined ROTOЯ as a dynamic propeller blade refreshing and responding to the culture around it, like a lung it both inhales and exhales. Our mandate becomes: ‘We relished the idea of bringing colleagues’ work to Huddersfield. Much of the art and design work has already been shown in a variety of international arenas or in other national venues within the UK, but it had never been shown collectively in Huddersfield, which is where our practice is carried out. In this respect we wanted the programme to be seen as a critical investment to our students, colleagues and the town in a sense we are bringing the work ‘home’. We imagined ROTOЯ as a dynamic propeller blade refreshing and responding to the culture around it, like a lung it both inhales and exhales. Our mandate becomes: ‘

One thing we have to make of all the moment, both in art and society, is a forced sense that collaboration, participation and engagement are in themselves a “good thing”. And, what we don’t have enough of is a sense that the freedom to disagree and conflict with one another in public, is fundamental to any democratic society.’

Today, art and design education is something less ideological and less radicalised as current pedagogy orientates itself towards the relational and corporate; negotiating a common curriculum that normally accepts transferable employability skills, academic research, manual skills, blending together creativity, the social and the technical. This is a reorientation of what constitutes the pedagogical concept of the art and design school today, and the critical and physical requirements for educating the next generation of creative practitioners in relation to preserving democratic society.
Many of the UK’s leading artists and designers are employed by universities

Social utopias and revolutionary hopes have given way to everyday micro-utopias and initiative strategies, an stance that is “directly” critical of society is futile, if based on the illusion of a marginality that is nowadays impossible, not to say regressive.11

Bourriaud’s point is that actually being local is crucially important: that the artist needs to be placed in a micro-politics of difference and to participate in the organization of communal needs. Pujol perhaps best sums up the relational turn art education has taken over the last twenty years when he writes:

“Although art education is a site-specific process and cultural product, I shape my field, which I have organized into three specific categories: the curriculum, the faculty, and the community.”14

I share my field, which I have organized into three specific categories: the curriculum, the faculty, and the community.

In his writings, Bourriaud brings subjectivity into play to defend the notion of subjectivity as a “critical rallying point around which a younger generation of practitioners might form themselves, in the context of being culturally embedded.”15

To conclude, universities are perceived as key economic and cultural drivers and are increasingly significant shapers of cultural experiences to the public. Many of the UK’s leading artists and designers, which include our colleagues, are employed by the university sector while being engaged in public-centred professional practice.

The ROTOЯ programme has established its own identity and presence in the Kirklees community. Responses from visitors have been very encouraging, and show people to be taking something positive away from their experience of encountering art and design research in a municipal gallery environment. However, interestingly, it has been difficult for visitors – and equally for ourselves – to be able to explain exactly what it was that that has caused, or comprised, these positive experiences. This problem has influenced much of our current research, and future research plans include the development of a delivery, measurement and dissemination of public engagement activity across art and design practices.

Fragments of a vessel which are to be glued together must match one another in the smallest details, although they need not be like one another.” - Walter Benjamin

Lisa Stansbie’s Flight brings to mind either a complex jigsaw puzzle or detective novel – both forms of representation where the image, structure or story requires the commitment and sensitivity of the reader-participant for its completion. Whilst such an active collaborator is necessary with respect to any and all works of art, one’s consciousness of the participatory requirements of Stansbie’s work is an implicit feature of its construction. This is both an attractive aspect of her practice giving the viewer a heightened role in the work’s fabrication, and arguably a frightening or disturbing one. The viewer may ask if indeed they are capable of making the work work of setting the machine in motion so as to generate a comprehensive assemblage of interlocking parts. Stansbie’s multipart installations require not so much a reader or viewer as a performer or interpreter. In The Open Work, Umberto Eco makes reference to works of art involving processes which, instead of relying on a univocal, necessary sequence of events, tend to disclose a field of possibilities, to create ambiguous situations open to all sorts of operative choices and interpretations. Stansbie’s playful but precise staging of multiple elements seem most aptly described by Eco’s remark. A few lines from Georges Perec’s disquisition on jigsaw puzzles may also be helpful here: with such puzzles, the individual:

‘[...] element’s existence does not precede the existence of the whole, it comes neither before nor after it, for the parts do not determine the pattern, but the pattern determines the parts. Knowledge of the pattern and of its laws, of the set and its structure, could not possibly be derived from discrete knowledge of the elements that compose it.”

To apply these observations to Stansbie’s Flight is to suggest that decipherment of the broader picture is what one should aim for – each individual component being simultaneously a kind of mystery or puzzle within itself and a clue to a higher or more extensive.
Straight from the store’, Baker remarks, the seductive beauty of such ‘untouched’, unbroken components: huge wall drawings. Nicholson Baker’s text ‘Model Airplanes’ discusses the models as diagrams of themselves arranged in series as three-dimensional jigsaws insofar as the order in which they are to be assembled is determined by what they represent: yet Stansbie undermines their representational function in a number of ways, notably by connecting together the components in a deliberately disorderly way, perhaps combining pieces from several individual kits into a single representational (though abstract) field. Additionally the kits are employed as ‘headache’ makers by being wall-mounted as complete kits. To place the pristine kit upon the wall in this fashion, giving an equal status to both the projected craft and the supporting structure in which individual components are held, is, in fact, to refuse the hierarchy of the model and its attached packaging; instead drawing attention to what is literally the frame of the plane through keeping the manufacturer’s utilitarian arrangement of the parts intact. Having noted that Stansbie gives the audience some considerable work to do in asking them to gather together and productively order the diverse workings of the world. But The Wings is something of a museum in the projected chain of meanings triggered by the work. They are microcosmic renditions of military or civilian craft themselves made up of multiple, mass-produced units. One might regard them as three-dimensional jigsaws insofar as the order in which they are to be assembled is determined by what they represent: yet Stansbie undermines their representational function in a number of ways, notably by connecting together the components in a deliberately disorderly way, perhaps combining pieces from several individual kits into a single representational (though abstract) field. Additionally the kits are employed as ‘headache’ makers by being wall-mounted as complete kits. To place the pristine kit upon the wall in this fashion, giving an equal status to both the projected craft and the supporting structure in which individual components are held, is, in fact, to refuse the hierarchy of the model and its attached packaging; instead drawing attention to what is literally the frame of the plane through keeping the manufacturer’s utilitarian arrangement of the parts intact. Having noted that Stansbie gives the audience some considerable work to do in asking them to gather together and productively order the diverse parts of her installations, one should also bear in mind the contributions involved in her own act of refusal with respect to putting things together in their intended order each individual plane. Instead Stansbie presents the models as diagrams of themselves arranged in series as three-dimensional jigsaws. Nicholson Baker’s text ‘Model Airplanes’ discusses the seductive beauty of such ‘untouched’, unbroken components: ‘straight from the store’, Baker remarks.

Notes
7. Jean-Francois Champollion (1790-1832) decoded, in 1822, the hieroglyphs on the Rosetta Stone, now in the British Museum. Michael Ventris (1922-1956) was responsible, in 1952, for the decoding of the Cretan script known as Linear B. For an account of both these major acts of decipherment see Doblhofer, E. (1973), Voices in Stone, Paladin. Arthur Conan Doyle’s fictional detective, Sherlock Holmes, first appeared in print in 1887.
Perhaps the most arresting aspect of this stimulating exhibition is the feedback from the public, the consumers of fashion rather than the makers. There’s a sense of revelation and wonder to the comments they leave behind. These outsiders are being let into a fashion-insiders’ secret, the alchemy at the heart of one of the most glamorous industries in the world. Led to believe that the journey from designer’s sketch pad to model’s back is a short and easy one, they are suddenly introduced to the engineering, to the technical skill, to the disciplined mastery of line and volume, to the measuring and pinning, to the problem-solving, rule-breaking and innovation that turns concepts into clothes. They are meeting the pattern-cutter.

Along with some fairly repetitive superlatives – fantastic, amazing, stunning, breathtaking – gallery-goers use the words, insight, illuminating, inspired and inspiring, intricate, whimsical, subtle, complex, challenging, exciting, weird, dramatic and sculptural. The small collection of archive black dresses demonstrates how cut is fashion is historical moment. And then the calico toile by final-year students that are the heart of exhibition reveal with great clarity the structure of the garments they have designed, a structure that out in the world, on a catwalk or in a shop window, is usually obscured by the texture, colour and pattern of the fabric, by the decorations, trims and notions used for the finished garment. Of course, the magically complex garments in the exhibition are not in the normal run of clothing. They are bravura displays of the lyrical possibilities of the pattern-cutter’s art. Many are simply beautiful but others have wit and mischief, putting one in mind of those great experimental pattern-cutters, the Japanese. It is no accident that one of the strongest influences on young pattern-cutters is Prof Tomoko Nakamichi of Bunka Fashion College in Tokyo whose Pattern Magic and Pattern Magic 2 books (Laurence King Publishing) are required reading for all students of fashion for here are many, many ways to create flattery, illusion and mischief.

From Issey Miyake’s independent-life, bouncy dancing dresses and ‘transformer’ garments – now one thing now with the shrug of the shoulders, quite another – to Rei Kawakubo’s deconstructed, reconstructed ‘interventions in space’ and Yohji Yamamoto’s spherical body cages and beyond to the next generation of Japanese designers, these are designers who understand pattern-cutting and work hip to hip with their pattern-cutters developing endlessly enchanting...
novelties which use the human body as an armature just as a sculptor does – or as a frame just as an architect would.

In his book exploring the close relationship between architecture and fashion, The Fashion of Architecture, Bradley Quinn quotes the architect and theoretist of the Modern Movement, Adolf Loos, 1898 essay, ‘The Principle of Dressing’ in which he asserts the primary of the construction of clothing in mankind’s creative struggle for shelter. ‘Young architects’, he suggested, should study textiles and clothing. ‘This is the correct and logical path to be followed in architecture. It was in this sequence that mankind learned how to build. In the beginning was dressing’, Quinn comments, ‘irrespective of their modern permutations and respective roles as micro- and macro-structures, both disciplines remain rooted to the basic task of enclosing space around the human form.’

There was a time back in the twentieth century when the most interesting fashion designers seemed to have studied for a degree in architecture. – Pierre Cardin, Roberto Capucci, Paolo Rambaldi, Gianfranco Ferre, Gianni Versace, Tom Ford – and their happy prescience with structure was very clear. But even those with a more conventional fashion education or with none, have acknowledged the pre-eminence of structure, for without it, where is shape, silhouette and volume? Where is eye-catching difference? Where is innovation? Where is fashion? The great innovators have not been sketchpad men or women; they have got down and dirty with seams and tucks, darts and interfaces. Look closely at the work of Paul Poiret, Madeleine Vionnet, Cristobal Balenciaga, Charles James, Christian Dior, John Galliano, Hussein Chalayan, Alexander McQueen and you will find the same intensity of attention to spatial experimentation, to boundary-stretching and rule-breaking. All of these have, however, been supported in their work by an understanding – not least and initially among the fashion press and student forum – of the input of the skilled and creative supporting cast.

The dual approach demonstrated by Kevin Almond in the work of these finalists will make great designers or brilliant pattern-cutters. The Symposium will set itself to solve many of the problems surrounding this issue where the credit for creativity is publicly vested in one star ‘designer name’ and denied to all the members of the support team. I remember an event at Central Saint Martins a couple of years ago when the journalist, Sarah Mower, was slated to conduct a conversation with Marc Jacobs before an auditorium packed with design students. Waiting for it to start, we were surprised when two extra chairs were suddenly thrust on to the stage. Jacobs had invited his shoe designer and his handbag designer accompanied him into the spotlight, giving credit where it is so rarely given, and enchanting the students who so desperately want to go work for him.

It could be taken as a long overdue beginning. Commercial enterprises that transfer star designers in the way of football teams but with less civility may not be able to hand out public accolades and vast salaries to the pattern-cutter but a system where there is a greater understanding – not least and initially among the fashion press and bloggerati – of the input of the skilled and creative supporting cast is an excellent goal to be working for. Understandably, the young, ambitious and fashion-bezzled will not long for a career as a pattern-cutter until that profession’s status is raised from ankle-length to somewhere, more finely above the knee.

Mining Couture is neither one thing nor another. It is neither here nor there. On entering the installation an appropriate response might be bemusement. It is not clear what kind of exhibition this is. Despite the obligatory wall-mounted introductory texts, the visitor is left uncertain as to where the artist Barber Swindells (in fact the collaborative duo Claire Barber and Steve Swindells) is coming from, what she/he is getting at, what the point of the show is.

On closer inspection and reflection one can identify a mix-up of all kinds of disparate disciplines. There are elements of clothes design, drawing, documentary video, photography, sculpture, nature studies, bouncy castle construction, social anthropology. There are references to the posh finesse of haute couture and to the nitty-gritty grind of the mining industry. It’s staged in a gallery so it must be art, but it’s far from evident what kind of art we are dealing with here.

A video monitor features a collage of fragments ranging through The Pitman Poets, National Coal Queen poses, dressmaking sessions and colliery closures. In an adjacent room a video is projected in blurred focus like an animated Gerhard Richter. On the sidewalk there’s an impromptu museum vitrine containing an assortment of leather glove exhibits including an exquisite miniature pair no larger than a fingernail or two. A caption informs us that in 1865 the Yeovil area was producing 421,000 dozen pairs of gloves a year and that fifteen to twenty women, mostly working from home, would be involved in sewing each pair. A noticeboard wall is a mass of scraps: dressmaking patterns, sketchbook pages, iconic publicity shots of Marilyn Monroe and Marlon Brando, notes from a countryside trek: ‘12th October 2011 2oz of acorns picked from a single oak tree by the road to fishing pond.’

Then there are the enigmatic central exhibits. One to Twenty reproduces the design of a fireman’s leather glove (properly named a Firemaster) on a gigantic scale as a deflated inflatable playground sculpture. Ventilation Dress is a full-scale reproduction of an auxiliary fan (late known as a booster fan) used to boost the air supply to new coal mine seams. The sculpture, however, appears to breathe rhythmically, and is clothed in a blue floral dress which is apparently an exact copy of the pattern of a dress once proudly worn by one Margaret Dornisak, the National Coal Queen for 1972. The wall-mounted texts draw my attention to the resemblance between the fan’s form and a human lung and mention conceptual clues of interconnection such as ‘seams’ and ‘fresh air,’ but this could well mystify me even further.

And of course the puzzle gradually emerges as the whole point. Barber Swindells’ art isn’t meant to mean one thing to argue an issue, to illustrate a thesis. Its shifting focus and alighting form is a deliberate attempt to open up connections, to ask questions that are at times imaginatively and even irreverently played as they are academically seriously and soberly researched. Just fancy coming across that breathing Ventilation Dress spot lit only by a helmet-mounted torch in an otherwise pitch darkened mine shaft. To draw a narrative trajectory between Ventilation Dress and a photograph of Marilyn Monroe with her dress lifted around her thighs by the updraft from a New York subway grill. Then connect these to those petite kidskin gloves and a jotting that reads ‘Blackberries picked from Snibston “spoil.”’ Then again realize that this developing scenario is factually informed by the information that Pit Brow Lass dresses were traditionally dyed from natural sources collected at Snibston spoil heap, thus affording the local women a very particular look. Something resembling poetry starts to resonate.

Barber Swindells
Mining Couture
16 June - 11 August 2012
Reviewed by Robert Clark
The most clearly clashing elements of Barber Swindells’ works lie in the traditionally mutually exclusive genres of craft design and fine art. One is supposed to deal with practicalities and aesthetic pleasantries, the other with wayward flights of utterly non-utilitarian reverie. Then there’s the clash between the clear-cut responsibilities of sociological research and the open-ended improvisations of creative experiment. A further series of dislocations result from the fact that much of the Barber Swindells’ work was originally created as part of site-specific commissions and residencies at Snibston Discovery Museum and Yeovil Glove Factory before being installed within the culturally hallowed confines of Huddersfield Art Gallery. It’s almost as if the artists are attempting to creatively curate their own past work within this very different context. So, if the work looks somewhat out of place, it’s perhaps because in fact it is.

Intrepidly, Barber Swindells put differing things together to see what happens, what thoughts and interesting quandaries might be catalyzed. This is an art of ‘what if?’ The art of collage and assemblage has of course a long history stretching back through the twentieth century and beyond. When the surrealists championed Count de Lautréamont’s chance meeting on an operating table of a sewing machine and an umbrella they recognised an utterly new kind of marvelous beauty. The willed hybrids of surrealism might look somewhat predictable by now, but the aesthetics and thematic implications of collage remain one of the most potent trends of twenty-first century art. The centre no longer holds. Specialisms are only validated by a broader focus. Our universities are increasingly informed by multi-cultural and cross-associational studies. Mixed and multi-media artists proliferate and often blur the boundaries between documentary fact and fictional make-believe. On a daily basis perception is bombarded by more images and text fragments than at any time during the whole of human history. Artists put this next to that and the other to see what imaginative spark might link the space between them.

If the visitor to Mining Couture initially finds the show bewildering, maybe it’s because we live in a state of bewildering cultural multiplicities. The health of our cultural ecology depends on drawing imaginative interrelationships. It’s a matter of disorientation and reorientation, of thinking things through anew. Barber Swindells, like any artists worthy of the name, mirror aspects of the world in which we live. Today.
The Patrick Procktor retrospective exhibition at Huddersfield Art Gallery in 2012 gave an overall impression of an artist of profound distinction and achievement rooted in an integrity sustained over several decades. Paradoxically evident even during his final years which were blighted by alcoholism and loneliness, there was a probing portraitist of compassionate acuity, an authentic chronicler of his radically changing times, and a colourist of rare originality, audacity and grace. He possessed a quality which the painter John Craxton described as ‘the chic of facility’ – an uncanny ability to evoke a person, a place, a creature, still-life or a milieu with a gliding freshness; a disciplined spontaneity revealed in, say, a fluctuating watercolour wash impeccably expressing the languorous figure of a young man resting in open repose.

The art world reputation that had gathered around him over the years condensed in a kind of flamboyant frivolity and flippancy; a veneer of dilettante dilatoriness caused his true artistic standing to be gradually obscured and occluded, even at times critically undermined.

(However, he did retain many faithful, appreciative collectors and supporters, not least London’s Redfern Gallery which successfully exhibited his work throughout his career.) The Huddersfield exhibition, along with Ian Massey’s 2010 monograph on the artist enabled us to realise – or at least to recall – that Procktor is an artist who we can, and should, take seriously, capable of awakening subtly pleasurable insights.

Procktor’s first exhibition at the Redfern Gallery in 1963 as a Slade graduate was a critical and commercial triumph; the critic Edo...

Mullins then noted, ‘When I first saw his work some two months ago I was immediately struck that here was an artist of real stature.’ Fifty or so years on, encountering this lifetime survey, our responses can now be as refreshingly open and vivid as Mullins’ were then, unhindered by decades of relative critical neglect and misunderstandings, and the kinds of snidely homophobic prejudices that too frequently marred the reception of his work over the years. I for one now happily concur with Mullins’ original evaluation.

His early ‘60s paintings have many sparkling, inventive intimations of an innately graceful sensibility in their depiction of balletic male nudes. These qualities may seem submerged under a weight of sombre impasto and the heavy existential seriousness and convoluted compositional complexities of a young ‘very tall, gangling, firework-display’ of an artist (as the renowned writer and curator Bryan Robertson characterised him) finding his way.

A delightful wing of the Huddersfield exhibition – though a centrally revealing one – was a wall of paintings (from the Kirklees Collection) by modern British artists who had inspired Procktor: an enchanting still-life by Christopher Wood; a vibrant mountainscape by David Bomberg; a fiercely tender assembly of male nudes in a Keith Vaughan gouache; and a tersely magisterial overview of The Antique Room at the Slade (1953) by Robert Medley. Bomberg’s example as a neglected visionary genius permeated Procktor’s experience at the Slade. Keith Vaughan never taught Procktor there but they became close friends. Procktor wrote, ‘I was very, very excited by his painting. I thought it was beautiful ... He was the best painter of the male nude.’

Procktor’s meticulously pared-down though sometimes ecstatically diaphanous portraits from the mid-’60s onwards were rooted in the sense of joyous liberation embraced in the period. In one portrait of a psychedelic green-and-yellow scarved Jimi Hendrix, the musician’s Afro hair is miraculously conjured up in a wild black watercolour wash. In a 1969 portrait in which Procktor’s handsome, pop star aspirant boyfriend Gervase Griffiths is seen absorbed in music on his headphones, the vibrant though miniscule detail of a single Moroccan Slipper (the picture’s title) perhaps hints at the phantasmagoric inner world Gervase has access to. The tactile and empathetic fluency, ‘the chic of facility’, of such pictures is surely equal to that achieved in Hockney’s more renowned portraits from the same period – as in Hockney’s own large acrylic portrait of Procktor himself standing in profile, cigarette in upraised hand, at home in The Room, Manchester Street (1967). The degree of evocative realistic clarity is astonishing. In Procktor’s 1991 oil portrait of an introspective-looking young man, Richard Sales (a painter himself and Redfern Gallery director), Procktor’s imagination was kindled by his long painting trips abroad. He wrote, ‘The light in Egypt is violet, in China daffodil, in Venice opalescent.’

The aquatints that Procktor made following a trip to China in 1980 are masterpieces of dispassionate intimacy: in his distilled view of Peking’s Forbidden City (1985), architectural shapes and colours appear both theatrically monumental and elegantly sparse and pristine in composition. A similar kind of spatial and colourist economy as well as an (underrated) compassion for anyone immersed in such an apparently clinical environment is also evident in Procktor’s remarkable large-scale oil painting Inside Old Holloway (1974). It depicts the wire-enmeshed spiral staircase descending to the immediately polished, gleaming David Bowie Floor below. Two indistinct yet somehow dignified female inmates stand on the two intersecting prison landings. Far above, a muted expanse of blue is glimpsed through a hexagonal skylight, where grey metal bars, curiously branch-like in form, seem to reach beyond the confines of the prison. Perhaps they offer a transcendental allusion to the nature of freedom existing beyond the prison confines. The artist dissects a poignant, immutable beauty even in such a stark setting.

Artists in the later 1960s and 1970s who attracted the label 'conceptual' created works that, for varying reasons, seemed to work to erase their own physicality. This was both a matter of these works’ 'objectlessness' (to use critic Michael Fried’s term, coined at the time) and their 'not being'; that is, the matter of their being able-bodied. But only in quite limited cases—a few examples being Douglas Huebler and Joseph Kosuth—in what corresponds, attempts abstractly and systematically to eradicate these dual characteristics altogether from the works they produced. Huebler, for instance, produced works consisting of only a few lines of text setting out a instruction or plan for an ‘artwork’. But this text, typed onto a lot of paper, was not the ‘work’. The ‘work’ was the instruction or plan, which, in essence, physically and visually intangible. Kosuth took this idea a stage further and produced whole essays as ‘works’, and in so doing attempted to erase the difference between an ‘artwork’ and a ‘work’ of philosophical reasoning.1 The legacy of these experiments for all artists, since the 1970s has been the creation of a repeated and inevitable oscillation: both presentism in the artwork and its readings of the artwork—between focus on its physicality/visually and its conceptual meaning/implication. Jill Townersley’s works in her exhibition Syphaxis at Huddersfield Art Gallery exemplify the oscillation, or tension, and explore its diverse effects.2

Townersley’s Sisyphus (2011) (for example, consists of 10,000 stainless steel balls partly and differentially unrolled towards the sky, secured in a rectangle of space nearly six metres square. At a distance of till rolls partly and differentially unrolled towards the sky, secured by a process of structuring and structuring itself constructs structure—the term ‘structure’ is used here in the way Gramsci used it, as a thread through which one is ‘formally autonomous’. That is to say, the works may always be said to ‘refer’ to things in the world and yet always also remain self-sufficient unto themselves. The engine of course, is one that posits an ‘antinomy’—not knowing of how to bring into commensurateness these two poles of the oscillation: An ‘antinomy’ is a ‘mutual incompatibility, and internal contradiction that denied four such antinomies are central to the character of existence. Two of these are particularly relevant here: the juxtaposition between space and time and, secondly, the fact of human free will in an existence governed by several causality.

Townersley’s Satie 840 dramatizes these two antinomies. In this installation we see a video, taking over twenty hours, where the artist writes and then erases at the numbers between one and 840 with chalk on a blackboard. Based on a music score produced by Erik Satie though never performed in his lifetime, Satie 840 most evidently brings Townersley herself into the work. Perhaps the antinomy or enigma, has a rhetorical resolution of sorts with this work—the oscillation between reference and autonomy is transcended (or ‘superseded’ to use a category in dialectics) in the figure of agency that Townersley herself here assumes. Structure is enabled, necessarily, by a process of structuring and structuring itself constructs structure (the central precept and insight of poststructuralist philosophy). But Gramsci’s antinomies were rooted in an analysis of twentieth century industrial capitalism and we should not miss the industrial-commercial material that Townsmans manipulates plastic spoons and the paper upon which till receipts are printed. Murders by Italian fascists in 1920, Gramsci’s ruling concern was with the role of nationalism and its power to ‘institute the working masses who should have been won over by communism’.3

All the works in Syphaxis allude to this question of society as a system—one of principles of ordering and re-ordering. As a totality however society is is, ultimately, self-sufficient, only imagined or partially figured.4 Townersley, following in the footsteps of Huebler continues an abstracted yet salient investigation into orders that are at once, visual, artistic, social, and intellectual. Her works point toward the system’s totality, and towards the reality of its generative demise.

Notes

3 The ancient myth of Sisyphus is that of the King of Corinth perpetually set to roll a stone up a mountain only to have it roll down again.5 See, for example, Podro, M. (1982), The Critical Historians of Art, Yale University Press.

1 See Harris, J. (2005), Writing Back to Modern Art: After Greenberg, Fried and Ontology, especially chapter 2. "Pure Painting" (1960: abstract painting)
You enter the white space of the gallery. A well-placed cluster of plain white plinths house sculptural objects under protective Perspex boxes. These small objects are in fact throw-away cameras in tutti-fruity colours—orange, fodsh egg blue, lime green... Rather remarkably, they have been smashed. Useless and disembowelled, these objects are fascinating. Their crushing has exposed their mechanical insards reminding us that behind the whole tradition of photography—made-easy lies a history of miniaturisation, mechanics, and optics. I found myself peering into the boxed-in camera to discover what mechanisms for the flash and so forth looked like. There was also the revelation of the film. These pre-digital cameras have rolls of film within them and as the light broke in when they were battered and exposed to light, the celluloid has been chemically altered: there will forever be a raw image, held in the fractured camera, the invisible moment of its destruction. But that is the wrong word: the cameras are not destroyed. They remain. As broken cameras they still speak, even more eloquently, with their insides made visible, of the machinery necessary to the making of indexical images, images that once held a momentary and luminous relation to a real world before them.

Making the ‘dead’ cameras, the sculptural objects that solicit our art gallery gaze, they tell us something about the tenor of this exhibition by Gil Pasternak titled Future Backgrounds. It is not a show of photography: it is an installation about photography, which, therefore, opens on its uses, its rhetorics, its support for fantasies and ideologies. The gallery is not space of display but of investigation. The relations between its several elements and two key spaces ask the viewer to become a thinking participant rather than a dispassionate tourist. Yet the space of the gallery is knowingly worked because the anticipation of being shown something—the expectation of the gallery goer—has to be invoked in order to be re-routed into reflecting on processes, politics, places and issues that cannot be ‘shown’ yet are everywhere part of our visual culture. Hence the least and most unprecious of cameras are offered up as the exhibited ‘object’ in a wry parody of the white-cube gallery exhibition of modernist sculpture.

Aligned in three groupings in the main gallery space are other sculptural forms. These are uniformly black metal structures that stand firmly on the floor. They are, however, supports typically used in photographic studios for the hanging of backdrop paper against which the photographer’s subjects are usually posed. Backdrops are fake, or rather they are imagined or fabricated scenarios into which a figure will be inserted while in fact standing in the photographer’s studio. The backdrop is about the artifice with which the apparent ‘real’ of photography is staged. Making it the subject of the exhibition tells us that we need to pay attention to the backdrops of real situations, to the landscapes in which we live our lives, the human geographies we populate and make.
Closer inspection down the formal queue of hanging backdrops, waiting their turn in the light, show us that these are also carefully constructed images in which there is already a subject. These backdrops are already portraits, as it were. Their subjects are plants. Not any old plants, these plants represent for the Northern European setting of this show; the exotic, the hot, the dry, the South, and the Middle East, over there, elsewhere.

The first backdrop in the main grouping shows a vast prickly pear, a cactus whose leaves are pricking with sharp protective needles while also sprouting their distinctive fruits. The Hebrew name for this plant is Sabra. It is the term adopted by the emerging Israeli state for those born within its territory. Home-born, native, indigenous. Pasternak explores with all the sharpness of the prickly pear’s needles the land where the prickly pear now grows has been not just the backdrop but is the inhabited geography of many peoples and cultures over its millennia. By the early twentieth century nationalism swept up formerly dispersed or imperiled subjects into a longing for a national identity. This could only exist when bonded to a national territory. Former co-inhabitants and new settlers, unwanted in other lands of a deadly Europe, colloided to form one of the most tragic and inaccessible legacies of modernity and its colonialism, imperialism and nationalism. For the Palestinian people claiming their own indigeneity to these lands, Sabra is synonymous with Zionism and Zion with colonialism. For the Zionist Sabra is the vision of the New Man and the New Woman in the age of return from millennia of exile and denigration in Europe and the Mediterranean worlds. Like these digger, well-armed and fruitful plants, the new Israelis want to be identified with being rooted in the soil and being well prepared in self-defense. Ironically, the prickly pear is not an indigenous plant to the eastern Mediterranean. It was transplanted in the sixteenth century from Latin America under another moment of violent colonization. Their importation echoes settler colonialism. Yet having come many centuries ago, these plants have also functioned in Palestinian agriculture as boundary markers for their groves and villages. Thus the plant that is portrayed begins to unfold its many stories, its conflicting histories, and its competing uses: the deep difficulty of this place now.

The Victorians created a cultural language of flowers linking each flower to a specific, often sentimental, meaning. Pasternak has identified with being rooted in the soil and being well prepared in self-defense. The prickly pear is not an indigenous plant to the eastern Mediterranean. It was transplanted in the sixteenth century from Latin America under another moment of violent colonization. Their importation echoes settler colonialism. Yet having come many centuries ago, these plants have also functioned in Palestinian agriculture as boundary markers for their groves and villages. Thus the plant that is portrayed begins to unfold its many stories, its conflicting histories, and its competing uses: the deep difficulty of this place now.

Pasternak researches the point of intersection between two sites of photographic practice that are deeply embedded in the cultural formation of subjects and of nations: the family photograph and landscape. Pasternak has long been engaged in making sense of a relation between the informal and sentimental aspect of the family photograph, and an official or national history marked monumentally.

Pasternak researches the point of intersection between two sites of photographic practice that are deeply embedded in the cultural formation of subjects and of nations: the family photograph and landscape. Pasternak has long been engaged in making sense of a relation between the informal and sentimental aspect of the family photograph, and an official or national history marked monumentally into the landscape. In several publications he has looked into a wide range of intersections between family photography state ideology
and the political domain at large, most often in the context of the Israeli-Palestinian struggle. Linking this specific site to the historical and theoretical discourses around family photography and family photographs, Landscape’s role in the production of ideologies of power, domination and possession has been well-documented as indeed has the family photographer as register and influence on our very sense of the most intimate of social units. Pasternak, however, brings the focus onto their interaction in order to create a new kind of dialogue between background and foreground, people and setting. Land is something other than a borrowed or occupied backdrop; living and shaping itself in performances before imagined cameras, and writing over a landscape that has other meanings for families whose installation as the subjects of their own history do not yet have a known political grammar or a recognised photographic image. This may be why the digital drawings have no background; just the outline of a re-posed figure assuming a posture extracted and rendered strange from a photograph. Thus the conversations cross-over within the photo-mechanically populated landscape of the exhibition.

Can artists as researchers use the exhibition space as a laboratory for research? Can the site of the presentation of suggestive findings - when the knowledge that is being produced is at once being excavated from conventions of representation and mundane realities so commonplace as to become invisible backdrops - be re-visited across the varied points of anchorage that the installation constructs through fragile lines of communication and connection? The answer from this installation is yes. I am asked to read the elements of a perfectly constituted exhibition whose purpose is not to show but to incite me to work, to bring forth the provocations to thinking that are generated in the movement between the assembled elements, at once distant and awaiting their chance to play a part in a larger statement.

One of the major areas of Pasternak’s research lies in provoking critical discourses and cultural practices around the landscape that divides Israel/Palestine. The show has become a venue with people positioned on either side. A future for the dignity, safety and justice of two peoples depends on imaginative leaps beyond walls and frontiers that may involve images of laying and co-habitation. Pasternak’s work takes no position, and invokes no specific politics. It simply addresses the specific issues that arise from two major genres of photography: landscape and the family album, where the family in that landscape is set against a backdrop that can never really be a landscape. It has history. It is human rather than physical geography and the question is: what might be a future backdrop for communal life and future generations? What is the future for families and communities, of all sorts, in this human space and geopolitical space? By making invisible the central players and allowing the ground of human and social life to stand in line, as so many fabricated backdrops enact a new configuration of people in the space, Pasternak’s work points to the role of artistic formulations of issues that are stymied with the dead weights of fixed ideologies and known political stalemates.

Pasternak’s Future Backgrounds functions as a comparable form of aesthetic research using photographic thinking as its instrument to probe the ‘problem’; to name the problem, as one of space, ground and the figure and the real and fabricated relations of the two in both time and space and in fantasies sustained by images made on site and in the studio against borrowed backdrops. This show is not an exhibition of photography; it demonstrates a way to think through a set of relating issues with photography. It belongs in the field Edward Said outlined in his essay ‘Invention, Memory and Place’ (2000). There Said identifies the overlap of memory and geography that produce what he calls human space; Memory is at once personal and familial, and historical and often national(ist). If memory appears to be inert, arising simply because the past has happened, we are now all too aware of a politics of memory; the invention of tradition itself. Where geography enters, we also encounter histories of domination, invasion, transformation and occupation. But as Said points out there are also imaginative geographies, imposed maps and mental fantasies of place and space. The Middle East is an extreme, aged and significant theatre for the playing out of contested memories, effaced presences, new inscriptions on the land and erased traces. As Said suggests: ‘[behind the] media accounts […] of the conflict […] we can discern a much more interesting and subtle conflict. Only by understanding the special mix of geography generally and landscape in particular with historical memory and, as I said, an aridizing form of invention can be begun to grasp the persistence of conflict and the difficulty of resolving it, a difficulty that is far too complex and grand that the current peace process could possibly envisage, let alone resolve.’

The point is that we need creative thinking that comes through art but does not rest simply as artistic practice as research takes us through the specifications of a singular practice as a means of thinking the world. By means of the jumps that can be made through combination, juxtaposition and transition, the creation of images and the montage of elements, new connections are forged. Here the undoing of the camera, the severing of the figure from the backdrop, and the elevation of backdrop to subject recombine as an installation that foregrounds what his academic research seeks to pierce through visual analysis.

The show’s location in Huddersfield, the use of a photographic archive of a British colonial traveller and the transplantation of botanical specimens reminds us of a deep British involvement in the land and peoples of the adopted prickly pear through the colonial Mandate (1918-1948). It acknowledges the need to de-exoticise, to make invisible the central players and allowing the ground of human and social life to stand in line, as so many fabricated backdrops enact a new configuration of people in the space, Pasternak’s work points to the role of artistic formulations of issues that are stymied with the dead weights of fixed ideologies and known political stalemates.

Think about design for healthcare and the spotlight inevitably falls on the systems, spaces and services of the hospital environment. Hospitals are where the real action is found in patient care – and where design innovation can make the biggest difference in terms of patient safety, whether this is related to controlling infection or avoiding medical error.

Against this background, it is all too easy to forget that more than 26,000,000 people receive care from district nurses each year. Indeed the design story in healthcare extends far beyond the confines of the hospital, even if it commands less attention outside its walls.

It is to David Swann's credit that his pioneering exhibition, Mobilising Healthcare, part of the ROTOЯ programme at Huddersfield Art Gallery, makes a comprehensive and engaging job of redressing the balance in design for healthcare by showing how innovation also flourishes in homes and communities away from the large nursing wards, operating theatres and intensive treatment units of the modern hospital.

Swann, who leads Product Design and Interior Design at the University of Huddersfield, shines a light on some relatively neglected corners of our healthcare system – from the home visit by the district nurse to the emergency ambulance on our streets – and demonstrates how design can make a difference there too. His primary tactic is to set contemporary innovations in the field, including some he has designed himself, within a strong historical context.

Patients, academic researchers, engineers and designers in a co-design process, the prototype interior project began with the designers joining ambulance crews on callouts during twelve hour shifts. Key insights were translated into sketch designs; a full-scale test rig was mocked up in cardboard and foam, resulting in a full-size ‘looks like, feels like’ mobile demonstrator.

The new ambulance reconfigures the layout of the patient treatment space. There is 360° access to the patient, which not only improves clinical efficiency but also enhances patient safety. The interior is designed to be easier to clean. Equipment packs containing specific consumables aid clinical performance, infection control and stock control. A new digital diagnostics and communications system anticipates a time when electronic patient records can be called up stock control. Its ergonomic and digital innovation points to a future in which ambulances do not simply scoop up patients and ferry them back to primary care hospitals, but treat them on the spot or at walk-in clinics in the community, thus easing pressure on the system.

Politically, as UK governments try to rationalise care into fewer specialist super-hospitals and close some local hospitals, such design debates are right on the money. Recent Department of Health Design Council demonstration projects to kick-start innovation in the NHS are also given an airing in this exhibition, such as the Design Bugs Out initiative, which aimed to sit alongside a ‘deep clean’ of infection-riddled UK hospitals.

Design Bugs Out is represented in Mobilising Healthcare by Pearson Lloyd’s smart, simple and robust commode, which is made by NHS supplier Bristol Maid. The alliance of a leading British design firm with a prominent British manufacturer under the auspices of a publicly funded initiative to improve UK health services, deserves commendation. But other parts of the world, where people have far less access to hospital care, perhaps provide the most inspiring examples of what design thinking can achieve.

My favourite case study in Swann’s compendium is the ColaLife pilot in Zambia, which takes spaces in refrigerated Coca-Cola crates to transport pods containing essential drugs around the country. This is community-based healthcare innovation at its most basic and ingenious. Indeed faced with the accelerating demands of an ageing and stover population, there is now growing interest in the NHS in such frugal techniques and in ‘reverse innovation’ of low-cost, high-impact ideas back into our increasingly expensive healthcare system.

Swann’s own ABC Lifesaver syringe, a brilliant innovation designed to deter non-sterile syringe re-use in the developing world by turning bright red sixty seconds after use, points the way to better, more sustainable community healthcare. It addresses the estimated 1.3 million early deaths caused by unsafe needle injections worldwide through the clever combination of a nitrogen-filled pack and a special ink that colours the barrel of the syringe when exposed to air.

By curating a show of his own and other design innovations of this kind, David Swann brings a novel and important angle to the critical debate about the future of healthcare in the UK and around the world. We may want to provide more care outside the expensive hospital setting. However, we need to design the right systems and services with the highest standards of patient safety to make it work. Recapturing the calm, immaculate reassurance of the Queen’s Nursing Institute isn’t going to be easy.

Notes

For the architectural theorist Anthony Vidler, the house has provided an especially favored site for ‘uncanny’ disturbances: its apparent domesticity, its residue of family history and nostalgia, its role as the last and most intimate shelter of private comfort sharpened by the terror of invasion by alien spirits’. In The Imagining of Things, Chara Lewis, Anneké Pettican and Kristin Majeewicz, the three artists working collectively as Brass Art, act as those ‘alien spirits’, invading the once private, now very public interiors of the Parsonage, a large, stone-built Georgian house standing on the very edge of Yorkshire moorland, once home to the Brontë sisters.

Inhabiting the creative spaces of the house on nocturnal visits, the improvised performances and resulting shadow-play which form the basis of video and photographic works in The Imagining of Things echo the scampering and game-playing of the Brontë children as they acted out the imaginary worlds of Angria and Gondal. The tiny books, maps and drawings of these fictional lands – the juvenilia of Charlotte, Emily, Anne and Branwell – allowed the children to invent and project narratives they could write and perform. In turn, Brass Art have used the domestic spaces of the Parsonage itself as an entry point for their own creative processes, employing the site as an expanded theatrical tableau, part transgressive homage, part performative return to the recurrent themes of their practice: doubling, mutability, liminality, the uncanny, thresholds and the spectral nature of technology in the manifestation of these themes.

Brass Art
The Imagining of Things
October 2013 – January 2014
Reviewed by Susannah Thompson
The Imagining of Things is one element of a larger, ongoing research project, Shadow Worlds: Writer’s Rooms. The multi- and interdisciplinary methods and practices employed by the artists, together with their commitment to collaborative and collective ways of working combine in this work to reveal a biomorphic approach to topopoesis. In the exhibition held at Huddersfield Art Gallery rather than attempting a literal or illustrative re-telling or interpretation of the preoccupations of the Brontës’ lives and works, the artists’ approach to space and subject attempts to reflect or parallel the affinities which exist between themselves and the literary figures which inform their practice. Using past and present, the concentric circles of narration woven throughout the novels of the Brontë sisters, Russian doll-like stories within stories and rooms within rooms, are formally reflected in the immersive mise-en-abyme of Brass Art’s installation. Standing within the gallery, the effect of the flickering forms and morphing, shifting shadows projected and reflected across the walls and ceiling of the space are disorientating. Half-captured images sweep and fill before the viewer’s bewilderingly and fading. Slinging, oscillating figures revolve within and beyond their projected spaces, appearing disconcertingly in front of, above and behind the viewer simultaneously. Using costume and handmade masks and props, the artists, although seen only as ethereal, spectral forms, are already in disguise. It’s as though Francesca Woodman had been cast in the film adaptation of a novel by Angela Carter. Glimpsed only fleetingly, these human-animal forms are avatars of the artists’ bodies as described through the technology of Microsoft Kinect, a motion sensor 3D scanner used in gaming.

Many of the invisible details, traces and fragments of the artists’ improvised performances in the ‘real’ yet psychologically loaded spaces of the Bronte Parsonage (specifically the Hallway, Dining Room and Mr Brontë’s bedroom) were revealed only later – the shadowy cut by the artists’ bodies as they whirled around and about the artefacts and relics remained unseen by them during the performance itself. With photographer Simon Pantling and programmer Spencer Roberts, Brass Art recorded both the same, itself and a Shadow realm: sounds and images beyond the threshold of the real, ghostly forms which appear only when the work has been completed. Although the projected forms within the video work are made visible through the use of cutting-edge technology, the images carry with them the remnants of distinctly older artworks: recalling the intricate, velvet cross-hatching seen in the drawings of Mervyn Peake or Honoré Daumier. The enigmatic, unheimlich figures and forms – both seen and suggested - are mired by a soundscape created by the composer Alistair MacDonald using field recordings and the artists’ voices. As light and shadow flicker and fade, so too fragmentary voices whisper, giggle, murmur and collide. Both image and sound combine to unsettle and disturb any attempt at single-point perspective or ‘fixing’ on the part of the audience. Both real and virtual spaces, concrete, sonic and psychological are thus warped, playing out as an endless feedback loop in a hall of mirrors.

Like many of the architectural motifs in the novels of the Brontë sisters themselves, the artists evoke the sense of moving through spaces only half-illuminated, corridors echoing with voices half-heard. Candles, draughts, light, the sweep of skirts and curtains, laughter from the attic, corridors, windows – the spaces and bodies in these works are often scarred, haunted, burnt or broken yet they remain resolutely powerful. In both the novels and in Brass Art’s work for this exhibition, gendered ideologies are questioned, thresholds are transgressed and rooms stormed and images, spaces and bodies are in flux, permeable. Rosi Braidotti has written of the ‘acute awareness of the non-fixity of boundaries’ and the intense desire to go on trespassing, transgressing – a statement which seems to encapsulate the critical intentions in Brass Art’s practice. To return to (and appropriate) the words of Anthony Vidler, ‘space […] has been increasingly defined as a product of subjective projection and introjection as opposed to a stable container of objects and bodies’.1 In The Imagining of Things Brass Art recurrently deploy the vocabularies of displacement and fracture, tearing and twisting, pressure and release, void and block, informe and hyperform to work that seeks to reveal, if not critique, the conditions of a less than settled everyday life.2

Peter Suchin is an artist and critic, contributing to Art Monthly, The Guardian, Mute, and many other publications. His visual work is discussed in Paul Crowther’s The Phenomenology of Modern Art, Continuum, 2012.

Brenda Polan FRSA was Director of Programmes (Media) at London College of Fashion in the University of the Arts London until 2012, and also works as a freelance journalist specialising in fashion, design and architecture, media issues and women’s topics. She is the co-author of The Great Fashion Designers with Roger Tredre, Berg 2009.

Philip Vann has written monographs on the artists Dora Holzhandler, Greg Tricker, Tessa Newcomb, William Crozier, Joash Woodrow and Keith Vaughan; and is author of Face to Face: British Self Portraits in the Twentieth Century.

Jonathan Harris is Professor in Global Art & Design Studies and Director of Research at WSA. He is one of the inaugural professors in the Winchester Centre for Global Futures in Art Design and Media. He is an editor of ten books and over a hundred journal essays. Recent publications include The Utopian Globalists: Artists of Worldwide Revolution, 1919-2009 (Wiley Blackwell in 2012). He is also editing a book on Pablo Picasso.

Girasol Pollock is Professor of Social and Critical Histories of Art and Director Centre CATH (Cultural Analysis, Theory and History) at the University of Leeds. Her current interests focus on the image and time; on trauma and aesthetic inscriptions, and feminist interventions in psychoanalytical aesthetics as well as cultural memory and the Holocaust. She has just completed Afterimages/After-Effects: Trauma and Aesthetic Transformation in the Virtual Feminist Museum (2011).

Jeremy Myerson is a writer academic and activist in design. He holds the Helen Hamlyn Chair of Design at the Royal College of Art, London, where he is Director of the College’s Helen Hamlyn Centre for Design, addressing people-centred design to improve life.

Susannah Thompson is an art historian, writer and critic. She is Lecturer in Visual Culture at Edinburgh College of Art, University of Edinburgh. Her academic research focuses largely on curating and alternative modes of criticism, specifically writing by visual artists and the role of writing in contemporary art practice. She has contributed as a critic to magazines and journals including Art Review, Flash Art, Contemporary, Modern Painters, Circa, Variant, A-N and MAP and has written catalogue essays and gallery texts for a number of artists and organisations.
