Biography

Qualifications: CertEd (PCET), BEng(Hons), PhD

Liz Bennett is a Senior Lecturer in the School of Education and Professional Development where she is Course Leader for the MSc Technology Enhanced Learning and the MA Action Research. She has worked at the Open University where she was involved in some large scale courses delivered via the web (Computing with Confidence: Learning Online and You, Your Computer and the Net). She became a University Teaching Fellow in July 2014.

Liz is an active member of the Association for Learning Technology, ALT. She is an Assistant Editor of ALT's Newsletter, and has been a Trustee and Member of ALT-C Programme Committee.

Value of informal learning (coaching and mentoring)

“working online as teachers and learners, we are working in ‘destabilized’ classrooms, engaging in spaces and practices which are disquieting, disorienting, strange, anxiety-inducing, uncanny”
(Bayne 2010, p. 6).

I’m teaching in a new context that has new affordances so there is scope to do different things as a teacher that you wouldn’t normally do and so you then have to think through for yourself is that pedagogically a good decision? Is it ethically a good decision to do it in that way? And you are making those decisions. And what you are doing is risky because you might make the wrong decision and you can make students unhappy. But I do it none the less, for a couple of reasons, one is that I think there might be benefits to teaching and learning and that is a central reason why you do anything isn’t it?... I’m doing it because I think that the benefits that accrue might be really important [Bennett 2012].

Really enjoyed the learning set on Saturday. Never participated in this activity before and was curious as to what it was. I found this really useful and left feeling very positive.

TWITTER CPD

Thank you Dr Bennett, for introducing me to Twitter. I have found that Twitter is a fantastic tool to support my professional development as a teacher.

With a Twitter account, you can create your own Personal Learning Network (PLN) to share ideas and resources with other professionals, locally, nationally and internationally. Many professionals tweet about all things associated with any topic in the teaching world. You can search for specific topics by hashtagging key words such as #iPaded, #edtech, #ukedchat. With Twitter, you can also join synchronous chats about specific topics, one of my favourites is #TweachCode which has lots of ideas and opportunities for contributing ideas and resources with other teachers who teach Computing. This session occurs every Monday evening at 8pm (GMT). Another synchronous chat is #edchat although this occurs at the same time. However, with [TweetDeck](#), you can easily manage the live stream of feeds you are currently involved in much easier than with standard Twitter view mode.

Twitter has continued to be a great tool that I use to support my academic studies. Anything useful I discover to support my studies I will usually Tweet for easy access at a later date. I am now coming towards the end of my MSc, and my Tweets are useful for references that I may include in my dissertation. Using the tweet feed, I can easily gain a quick visual overview for anything I may have missed out.

Which mobile tools do pupils really use?

BY R W

This blog post is based on the research I have been doing over the last year for my Masters dissertation (and explains the long gap since my last blog post!)

I was researching 'Pupil perspectives on mobile learning' and worked with two schools – one where all pupils had a mobile device supplied by the school (Academy M) and a second where mobile devices were not allowed (Academy A). I asked all pupils whether they used mobile devices to help with their learning. From those who replied 'yes', I went on to ask them (via a questionnaire) which features of their mobile devices they used to support their learning.

(Data collected December 2012)

The Internet was the most widely used tool. When asked about this, the most frequent response was that it was used for 'research'. For most pupils, this meant that they would 'google' something

Welcome to the group, we hope you enjoy looking through this collection and can maybe add some research/links you've found yourself. To make it easy for people to scroll through, please can we keep this group to links and literature only, with a short description of what the link is if the header isn't obvious. Thanks

'Birds of the Social Wilderness'

A bit of fun for my weekend #30dayswild blog...read my original commentary at www.facebook.com/MikesEDEN.

Here's a taster to get you started...

Peacock: we all know a peacock. They can't wait to show off how amazing and spectacular they are at every opportunity. Elaborate visual displays are also accompanied by a rather loud and unpleasant screeching...but the peacock doesn't care; he's too special for that.

NEWS

Lives saved by breast screening outnumber cases of overdiagnosis, review says

Nigel Hawkes

London

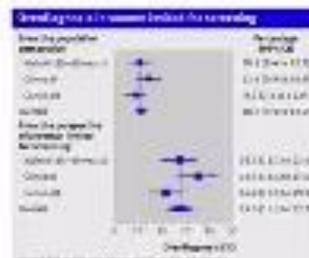

A Europe-wide review of breast cancer screening has concluded that the benefits in lives saved outweigh the risks of overdiagnosis.

The analysis, carried out by a working group from nine European countries, showed that for every 1000 women between the ages of 50 and 69 who are screened, between seven and nine

Suprien Durrin, professor of cancer screening at the Wellcome Institute of Preventive Medicine at Bath and The London School of Medicine and Dentistry, who is one of the coordinators of the working group and co-author of the supplement, said: "This is the only comprehensive review of the benefits of breast screening services in Europe."

RESEARCH NEWS

Breast cancer screening: one life saved at a cost of three overdiagnoses

However, a major meta-analysis of randomised controlled trials comparing screening to no screening for breast cancer found that the benefits of screening outweigh the risks of overdiagnosis.

These are the first results from randomised data, the panel emphasised. They reviewed the evidence available from the randomised and non-randomised breast screening studies. Final evidence was considered most reliable, although only three of 18 available trials had been randomised properly. Together, the trials looked at more than 200 000 women and more than 600 000 breast exams. These improvements in evidence over the years made these findings important. The panel found no data to support this and thought that randomised evidence was not yet available. The best evidence on overdiagnosis came from three trials in which women randomised to the control group weren't offered screening at the end of the study period. These data show

BMJ 2012;345:e6155

Compare the view stated in the video with the statistics presented in the two BMJ articles (you can find these via the Liverpool University electronic library)
