First steps to integrating Corpus analysis into everyday classroom practice

Abstract
Language teaching is an exciting area for applying corpus linguistics. This article gives a glimpse into practical applications of Concordancers in academic writing and provides examples of Concordance exercises that can be used in the classroom to introduce students to working with corpora.

First steps to integrating Corpus analysis into everyday classroom practice

The aim of the article is to highlight the importance of data-driven learning for developing student autonomy by empowering and motivating students to do linguistic mini-researches that lead, in turn, to the discovery of important linguistic phenomena. The article presents several ways in which Concordancers and corpora\(^1\) can be used in everyday classroom practice within the context of developing student autonomy.

The classroom use of Concordancers is largely based on the principle of Data Driven Learning (Johns 1994) and discovery or serendipity learning (Bernardini 2000), one of the main tenets of which is the idea that students are more likely to retain and recall information which they discover for themselves as a result of collocational analysis supported by grammatical and frequency analyses.

In language teaching these same methods have also started to take hold. The concept of autonomous language learning was famously pioneered by Holec, who defines autonomy as ‘the ability to take charge of one’s own learning’ (1981, p. 3). Krashen in 1981 started promoting autonomy in language acquisition and learner control by searching for, and discovering, new material and resources as well as choosing the time, place, intensity and pace of learning.

The uses of Concordancers may range from very simple tasks like checking the correct use of prepositions or place of connectors, to more sophisticated tasks, for example, exploring word collocations, making decisions about correct word usage, analysing and using information about word frequencies.

In this article I will describe some easy ways in which Concordancers can be introduced into the EAP classroom. These ways include checking prepositions and common phrases, getting help with some grammatical issues, for example singular and plural forms, finding examples of authentic collocations.

**Corpora and Concordancers**
Among a striking variety of Concordancers and corpora available now for teachers and learners, I find The Compleat Lexical Tutor [http://lextutor.ca/conc/eng/](http://lextutor.ca/conc/eng/), Sketch Engine open access [https://the.sketchengine.co.uk/open/](https://the.sketchengine.co.uk/open/) and COCA (Corpus of Contemporary American English, academic) [http://corpus.byu.edu/coca/](http://corpus.byu.edu/coca/) particularly useful for the purposes of my students because they are user-friendly, open access, easy to teach and to learn, and free.

\(^1\)Corpora – large sets of texts, e.g. British National Corpus which was created in the 1980/90s and comprises over 100 million words
Concordancer – a computer programme which allows users to browse corpora showing the key-word usage in multiple contexts
The essential first step is to introduce students to KWIC (key-word in context) search.

Sorting out simple language problems
Prepositions
Mistakes in the use of prepositions are a recurrent problem for students of English. Giving students a quick and effective reference tool usually helps in demonstrating the benefits of using this programme to help with writing. Students can be given an initial task:

**Task:** what prepositions are used after *difference* - ? and *different* - ?
This search usually leads students to the following conclusion:

**Difference** noun
- between (e.g. differences between two communities)
- in (e.g. differences in attitude)

**Different** adjective
- From (e.g. language different from original query)

It is useful to ask students to run checks on most commonly confused prepositions. Here is another example of a task:

**Task:** what preposition is used after
**insight -?**
**draw -?**
**discuss -?**

Try several corpora; use *equals* search and *sort to the right*

Record your findings

<table>
<thead>
<tr>
<th>word</th>
<th>Preposition/s</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>insight (n)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>draw (v)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>discuss(v)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Set phrases**

Checking the correctness of commonly confused phrases is also a productive method of introducing students to working with Concordancers. Below is a task which I give students at the initial stages.

**Task: choose the correct form of each phrase using Concordancer. Try families searches and *equals* options to search separate phrases in several corpora, e.g. Humanities and Medical:**

a) *The structure of the first chapter is as following / following / as follows / as follow*

b) *As regard/ regards / as regarding / with regards /as regards/ with regard to housing, employers' policies vary*

c) *As far as the new rent is concerned/ As far as concerning new rent / Concerned new rent/ concerning new rent options fall into four categories*

Make a note of your results:

<table>
<thead>
<tr>
<th>Correct form</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Clarifying some grammatical issues**

**Plurals**

Some common grammatical mistakes in student writing can be addressed by Concordancers searches. One of the common questions students ask is whether *data* is singular or plural. A quick search of Lextutor Concordancer shows approximately similar numbers in the Academic General Corpus and in BNC Humanities, however, the BNC Medical Corpus shows definite preference for plural usage. This can be a good way of introducing linguistic differences in academic writing in different subject areas. Differences in the usage of *data* were highlighted by Tim Jones in his Kibbitzers: “The choice of plural or singular ... also correlates with the *meaning* of the word. The (traditional) meaning "evidence used in experimental procedures" is most often plural, while the (more recent) meaning "digital information stored or manipulated by a computer" is most often singular.” ([http://lexically.net/TimJohns/Kibbitzer](http://lexically.net/TimJohns/Kibbitzer)). As a result, singular usage can be expected to be more common in computing texts.

Another common mistake is using the noun *literature* in plural. A search of singular and plural forms on Lextutor gives the following results. In the Academic General Corpus – there are 1239
hits (206 instances per million) for *literature* and 13 hits for *literatures* (2 per million). The BNC and COCA give similar results: the BNC has 49 instances of the plural as opposed to 5246 for the singular; COCA has 305 against 28,055 for the singular. I then draw students’ attention to the usage of the plural form of *literature*, where it mostly means different kinds of literature, or literature of different peoples, but not sources in literature reviews.

**Collocations**

Collocations are one of the most persistent difficulties of L2 students because of the formulaic nature of the English language (see, for example, Wray 2002). Students can be given tasks to run specific searches for collocations sorting the results to the right or to the left of the key word.

For example, the search for prepositions used with *difference*, as described earlier, can also be used to learn about collocations. By sorting the results of the search to the left, students can find out what adjectives commonly collocate with *difference*:

```
Adj + difference: basic, big, clear, considerable, crucial, cumulative, essential, factual, fundamental, further, genuine, great, important
```

A variety of material provided by such searches could result in follow-up tasks, in this case centred round using *adjective + difference* collocations in the students’ own writing.

In the same vein, the search on the word *literature* can also reveal its collocations:

```
Adj + literature: Existing, extensive, previous, recent, relevant, contemporary, early, earlier, analytic, expert, limited and even unexpurgated

Literature + verb: reveals, deals, emerges, shows, tells, recycles old material, has been accumulated, has been aimed, has been developed

Word combinations: Body of literature, subset of literature, recent strand of literature, broad range of literature, contribution to the literature, theories available in the literature, common perception in the literature, has often been neglected in the literature, adapted from the literature, existing theoretical literature
```

To sum up – this article has attempted to give teachers some initial suggestions for using Concordancers in the classroom. The possibilities offered by these programmes are much deeper and richer: they can offer substantial insights into grammar, vocabulary and academic writing style.
