Embracing open access publishing for academic staff and student research

Original Citation

This version is available at http://eprints.hud.ac.uk/id/eprint/33203/

The University Repository is a digital collection of the research output of the University, available on Open Access. Copyright and Moral Rights for the items on this site are retained by the individual author and/or other copyright owners. Users may access full items free of charge; copies of full text items generally can be reproduced, displayed or performed and given to third parties in any format or medium for personal research or study, educational or not-for-profit purposes without prior permission or charge, provided:

- The authors, title and full bibliographic details is credited in any copy;
- A hyperlink and/or URL is included for the original metadata page; and
- The content is not changed in any way.

For more information, including our policy and submission procedure, please contact the Repository Team at: E.mailbox@hud.ac.uk.

Overview

• What does Open Access mean?
• How and why is the University of Huddersfield Press involved?
• What part does digital transformation play?
• How does all this impact on the scholarly community?
What does Open Access mean?
How has the Press got involved with OA?

- Excellence with impact
- Investing in people
- Research environment
- ‘Facing outwards’ (international)

https://research.hud.ac.uk/strategy/
Universities and scholarship

- Discovery
  - Research & new knowledge

- Integration
  - Connections across disciplines

- Application
  - Public engagement

- Teaching & Learning

How has digital transformation played a part?
What impact does the OA model have on readership?

“Open access articles receive 50% more full-text accesses and PDF downloads than subscription-access articles”

Kenneth R. Fulton, *PNAS* Publisher

http://www.library.yale.edu/~llicense/ListArchives/0505/msg01580.html

“...OA articles are cited earlier and are, on average, cited more often than non-OA articles”

“I wrote about the stories behind the research papers - the stuff that doesn't make it into the official write up.”

“The thing that really flew was my post on what happens when you blog and tweet a journal paper: showing (proving?) the link between blogging and tweeting and the fact that people will download your research if you tell them about it.”

http://melissaterras.blogspot.co.uk/2012/04/is-blogging-and-tweeting-about-research.html
What impact does our OA publishing have on the research community?

‘Open access publishing not only provides students and researchers with viable methods to disseminate their work but it also expands the opportunity for anyone, anywhere, to gain access to essential inspirational and educational material.’
What do the students say?

‘Generally a really good experience and a great opportunity to improve my academic writing abilities. Skills I developed throughout the process have been a real benefit on my Masters course’

‘I feel privileged to have been given the opportunity to have my undergraduate research published and made accessible to a wider audience’

‘Having my research published in Fields has been the pinnacle of my achievements, particularly as I am working full-time with a young family. It has enabled me to finally believe in my own abilities as a writer and researcher, as well as raising my professional status in my workplace.’

‘The experience of writing for the journal has certainly been a positive one. It has allowed me to develop publication skills, improve my academic work and take on board different perceptions and criticisms’

OPEN ACCESS

quickmeme.com
Digital, yes
Transformation, maybe?

• “Since early 2000s, social web technologies have facilitated the digital publication and circulation of content directly generated by users (rather than by publishers). In principle, academic authors can now publish and distribute their work on their own webpages, or on repositories run by universities or non-profit organisations. Technical support and systems are certainly needed, but the traditional publishing firm is no longer a necessary point of access…[emphasis added]”

‘There has been a substantial increase since 2012 in the share of academics that preserve their research data in an institutional or other type of online repository and a corresponding decrease in the share that preserves these data themselves using commercially or freely available software or services. Additionally, there has been an increase in the share of academics that have received assistance, from their university library or elsewhere, with making a version of their research outputs freely available online.’

‘We have observed noteworthy increases since the previous survey cycle in the importance that academics assign to the service-based roles of the library, as compared to those that are collections-based. In particular, there has been a substantial increase in perceived importance of the role of the library in helping undergraduate students develop research, critical analysis, and information literacy skills.’

The rise OA in the early 2000s contributed to difficult conditions for traditional publishers, and a gap in the market for a new model of monograph publishing, which university presses were well placed to explore. The successful NUPs tend to have a three-pronged approach of high level University strategic support for OA engagement, staff dedication to disseminating research and creating impact, and research staff being encouraged to explore new platforms and models. The HEFCE mandate for all articles post-2014 REF to be OA has supported the need for more OA platforms, and this will expand into monographs.

ECRs are the largest and fastest growing sector of the research community, producing high volumes of output but often feeling constrained by prescribed rankings and lists. The ability to share and access research online and through social media is of growing importance to this community.
