**Negation: Form, Function and Effect**

Lisa Nahajec MA BA(Hons)
Department of English School of Music, Humanities and Media
University of Huddersfield

### Research questions:
Negation has the interesting property that allows us to conceptualise and understand the world in terms of what doesn’t happen or what attributes something does not have. It is not only that we can conceptualise negative states, but that these states are both relevant and meaningful. This research takes a theoretical approach and aims to answer the questions of what textual appearance negation has, how it functions to instantiate and deny or reject a previous assertion, and what effect this has in natural language.

### Form

#### Types of negators

**Syntactic**
- My dog is not barking.

**Morphological**
- John unfastened his shoes

**Inherent/lexical**
- The bus failed to arrive on time

**Conditional**
- If the bus had arrived late I could have caught it.

**Modals**
- He should have moved.

### Function

Negation functions to deny or reject a previous implicit or explicit assertion. It can also instantiate the opposite positive counterpart from which the hearer/reader constructs a mental representation of that which is being rejected.

**Prototypical**

**Peripheral**
- "They want to maintain an attitude that keeps women unhealthy, unfed, uneducated. This is not culture. This is not custom. This is criminal." — Hillary Clinton in *Times Online* 14/01/09

### Effect

The effect that the use of negation has on understanding texts can be powerful. In non-fictional texts such as advertising, the creation of a non-state can manipulate readers/hearers into assuming that the background positive counterpart is the norm.

In the above example, the use of negative accommodation, the simultaneous construction of an expectation and defeat of it, creates a background norm that tinned tuna is usually associated with drama or stress, a problem which ‘no drain tuna’ solves.

As our assumption about negation is that it denies a prior assertion, when negative accommodation is used, the default assumption is that a prior assertion has been made. As such, negation has the potential to manipulate people into believing there are problems that need solving even if there didn’t appear to be any problems at all.

With thanks to my supervisors, Prof. Lesley Jeffries and Dr. Dan McIntyre.
