Series Editor's Introduction

Welcome to the fourth edition of the SocInfo Software Catalogue, now called The SocInfo Guide to IT Resources in Sociology, Politics and Social Policy.

Although this edition has been a long time coming, I am sure you will agree that it has been worth the wait. In July, last year, I invited Graham Gibbs, an active member of the SocInfo Advisory Group to compile and edit this edition. Since then Graham has worked tirelessly to produce this edition and I would formally like to record my sincere thanks for all his hard work.

This guide is intended to provide the reader with a good overview of the range of IT resources that are available in sociology, politics and social policy. It is clearly not possible nor desirable to include everything here, but there are no duplication of items from previous editions, with the exception of up-to-date reviews.

The Centre actively seeks information on and teaching and learning courseware that has been developed in and for the social science community, so if you are aware of any programs and /or have developed any, please get in touch with the Centre at the usual address. It is clear that much more UK CAL development is required in the social sciences as we are lagging well behind other discipline areas. Nevertheless, this guide does provide evidence of a growing number of programs which can be customized and used by academics in sociology, politics and social policy. In particular, the expansion of the Internet and other forms of computer-mediated communication are areas where the social science community can help to shape policy on the use technology in teaching and learning environments. The recent ESRC programme on the Virtual Society reflects a welcome change and there is some hope therefore, that not only will a number of critical studies emerge but that the call for funds to develop CAL in the social sciences will be heard.

Finally, I do hope you enjoy reading this edition, please feel free to comment on the layout and content. Readers should note that primarily due to cost and time, this will be the last time that the Centre produces such a bumper hardcopy edition of the Guide. Updates will be available and extended on our web site:

http://www.stir.ac.uk/socinfo/

For readers unable to access the Internet, the Centre will be able to offer more traditional assistance.

Regards and Best Wishes,

Ms Millsom S Henry
Deputy Director and Series Editor - SocInfo

Guest Editor's Introduction

Welcome

The fourth edition of the SocInfo Guide to IT Resources lists over 450 items of software or information sources that will be of interest to teachers in higher education in sociology, politics and social policy. The main focus of interest is IT materials that can be used in teaching, though much of the material in this guide could also be used for research work.

The task of assembling and collating material on software and sources of interest to social scientists is huge. Not only are the sources of information very diverse, though now much of it is available on the WWW, but also the software rapidly changes and develops. Compiling this guide is rather like painting the Forth Bridge, no sooner has one reached the end than one must start revising from the beginning again. Moreover, there is not room in this printed guide for all the information of relevance to social scientists. So to keep the information up-to-date and to allow for more information, this guide will soon be available on the WWW in the SocInfo pages at:

http://www.stir.ac.uk/socinfo/

I also hope that there will be a local Web search engine available soon so that the guide can be searched by key words. In particular, for lack of space I had to omit sections on software training videos, CD-ROMs etc., Geographical Information Systems, Books on software use, and information on how to use the Internet such as how to download and decompress free software (including demonstration versions of programs).

Acknowledgments and thanks

In the spirit of the sharing of information between CTI centres, I have used several sets of information on software gleaned from other centres. In particular I would like to acknowledge material taken from the CTI Centre for Psychology, the CTI Centre for Textual Studies and the CTI Centre for Statistics. In many cases I have edited and extended the information. Any errors introduced are mine and not those of the original centres. Several colleagues have been helpful in providing information, and in particular I would like to thank Millsom Henry and Kate Bloor. Thanks also to the members of the SocInfo software review panel whose reviews form the basis of information on many pieces of software in this guide.

Graham Gibbs University of Huddersfield

General Information

Are all the programs recommended by SocInfo?

No. This is a *Guide* to software. Where space permits there is an indication of available reviews of the software. Use them and information you get from colleagues, distributors, web pages etc. to make a judgement. You could always try sending a request to the SocInfo Mailbase list (socinfo@mailbase.ac.uk) to see if others have had experience with the software. Some distributors may be willing to give you the names of users of their software with whom you could discuss your requirements.

How do I get the software?

Order directly from the distributors as given in the guide except where the software is subject to a CHEST agreement. Then order via your computer centre. Sometimes demonstration versions are available either on disk from the distributor or by downloading over the Internet.

Information given

Information given about software includes what hardware and operating system it runs on. Space available prohibits very detailed description of requirements. If in doubt check with the software distributor and with information on their web pages (if available) where up-to-date details are usually given. This guide focuses on Macintosh and PC compatible platforms and the associated operating systems, MacOS, MS-DOS, Windows 3.1, Windows 95 and Windows NT. Some information about other platforms such as UNIX is given, but this is limited.

The price given is the latest known to the compiler of this guide. Unless stated, prices exclude VAT and other taxes. Note that things change rapidly in this area. So always check with the distributor for the latest prices. There is not space to give full details of discounts, site licences etc., so again check. Many software titles are available under CHEST agreements, which deliver low prices and site licenses. Check with the CHEST software guide (see page 174) for the latest deals. Your institution should have a CHEST contact person (usually in the Computer Centre.)

The address given is where the software can be obtained, and telephone and fax numbers and E-mail address and WWW URL are given where known. Note that the distributor of the software is not always the same as the company which produced the software. Where space permits and where it is important the developer contact details are given too.

Hardware and operating system

Windows 3.1 (Most of these programs will run under Windows 95)

MS DOS. Usually at least v 3.2 but may need latest version, 6.2. Many of these programs will run perfectly well under Windows 3.1 or Windows 95

Windows 95. N.B. Where this is showing, it means a Windows 95 only (32 bit) version is available.

Windows NT. Most Windows 95 only versions will run under Windows NT.

Macintosh. This includes native Power Macintosh. Where a separate PowerMac version is available, this is indicated in the text.

A UNIX version is available.

Further details of hardware and software requirements are given in the text where they are known. If you are in doubt, contact the software distributors. Terms use here are as follows:

386+ Intel 80386 processor or better

486 166 MHz + Intel 80486 processor running at 166 MHz or better

Win 3.1+ Windows 3.1 or later version Win 95, Win NT Windows 95 and/or Windows NT

RAM Random access memory - the minimum needed to run the software HD Hard disk (with an indication of storage space needed if known)
CD-ROM CD-ROM drive needed. Any material on CD-ROM needs a drive.

Type of Resource

Program. Usually available on disk, but some software can be downloaded over the Internet (especially public domain and free software) and some programs are now being made available on CD-ROM. Where only a CD-ROM version is available the symbol below is used.

Information source available on CD-ROM. Operating system supported indicated by the symbols in the table above.

Book or other printed resource.

Video cassette.

Information source. Either a Web site or the text gives background information.

SocInfo Guide to IT Resources On-line

From April 1997, the contents of this guide, including extra sections, will be available on the WWW. The will be searchable using the CTISS search engine and I hope will also be searchable using a local search engine.

The URL is: http://www.stir.ac.uk/socinfo/pubs/softcat.html

socinfo@mailbase

The SocInfo Centre runs a discussion list on Mailbase. It is called socinfo. Its remit is to promote discussion between social scientists on the use of new technologies in society and in particular, Higher Education. Users are encouraged to send requests for information, papers for discussion and notices for events.

You can join it my sending a message join socinfo <your first name(s)> <your surname> to mailbase@mailbase.ac.uk

An example message would be join socinfo Graham Gibbs (You should also turn off your signature for this message)

Subsequently, to send messages to the list send them to: socinfo@mailbase.ac.uk and they will automatically be distributed to all the others on the list.

There is a WWW archive of socinfo messages. This can be found at: http://www.mailbase.ac.uk/lists-p-t/socinfo/
A list of current members is also available there.

SocInfo Guide to IT Resources On-line

From April 1997, the contents of this guide, including extra sections, will be available on the WWW. Future editions will be available this way. The URL is: http://www.stir.ac.uk/socinfo/pubs/softcat.html

General Software

Included in the following sections is software which is of general interest to social scientists. This includes authoring software and software for creating and administering tests, software for graphing and presentations and software to support writing such as bibliographic programs and reference CD-ROMs.

Multimedia Authoring

Authoring, developing your own courseware materials and programs, is not for everyone. The kind of quality now demanded by students and teachers means that it involves a great deal of effort and expertise and that usually means teams of developers and funding to support them. Nevertheless, there is still scope for the individual developer, especially in producing programs with limited range that address specific needs. The packages below support such developments. They do not make it easy, You will still probably need to learn some kind of programming or scripting language, but the packages make it much easier to produce software that has all the graphical and multi-media elements users now expect.

The most interesting development in courseware in recent years has been the use of the World Wide Web. Originally putting teaching materials on the Web required knowledge of HTML – the scripting language of the WWW – and skill in dealing with UNIX, FTP etc. Now things are different. Many of the authoring packages allow you to convert your programs directly for delivery over the Web and there are also now some very good programs for the development of WWW pages. See the section on page 153.

Authorware Professional

An authoring tool for creating interactive multimedia courseware. The structural metaphor of Authorware is that of a flowchart, where icons representing system Authorware is like a high-level programming language which uses icons instead of words, and the routines, branches, and loops are represented graphically rather than textually. For more sophisticated effects, Authorware supplies some 200 variables and functions which may be incorporated into routines, so some scripting may still be required. Authorware supports many advanced features including reasonably sophisticated animation and graphics facilities. Its functionality may be extended by means of DLLs (Windows) or XCMDs (Macintosh). Runtimes of applications created with Authorware may be distributed free of royalties. Applications written on the Macintosh can be ported to the PC platform without difficulty, though not the reverse.

Caleidoscope

Caleidoscope v. 1.0 is a tool to help deliver educational courseware and multimedia applications to students. It can be used to build two types of application; integrated delivery systems for the institution and also stand-alone packages that integrate courseware modules developed using the same or different authoring tools. Caleidoscope allows you to index and map facilities available on the computer, monitor the usage by individual students on each section of the available material and also to build a front end to enable students to navigate around the material.

PC compatible (4 MB RAM, Win. 3.1)

A downloadable demo version: ftp://users.aol.com/learnsys/caldemo.zip

Coursebuilder 4.0

Graphics-based authoring system for stand-alone courseware. Create a content map or use built-in text editor, graphics tools and bit-mapped painting tools. Supports imported clip-art, music, digitized sound files, synthesized speech and intelligent branching. VideoBuilder provides additional support for the control of interactive video. Coursebuilder also supports direct program codes and XCMD commands. A run-time delivery module for complete courseware can be licensed.

Macintosh

£695

Interactive Options Ltd, 16-18 Southampton Road, Ringwood, Hants BH24 1YG

Multimedia Authoring

ECAL 1.0

The ECAL (Extended Computer Assisted Learning) software is a tool for developing teaching software in declarative domains, where conceptual information and the relationships between concepts are of primary importance. The system allows the construction of units of multimedia material, containing text, graphics, bitmapped pictures, video segments and sounds. Each of these segments is indexed in terms of the concepts that the learner needs to understand. The system is then able to create courses based on this material without the need for an author to specify control flow.

PC compatible
Price on application

GUIDE v. 4

Hypertext program, which has been used to develop several teaching packages. Guide is more oriented towards text than graphics, and there are several different ways of linking text, including replacing words with a longer form, such as a definition. Allows up to 32 levels of text, graphics, etc. Links can also be made to a videodisc. Other applications can be run from within Guide and custom extensions can be added with Interpreter. Hypertexts prepared on Guide for PC can be converted to the Mac and vice versa. Guide runs under Windows". Guide Reader is a run-time only package which allows third parties to view hypermedia publications with Guide. Guide Full Text Indexer is a publishing tool which works on a collection of Guide documents and records the location of every important word. When used in conjunction with Guide Reader, this allows the user to perform very fast searches for words and phrases in the document collection.

PC compatible (Win 3.1), Mac. and Nimbus Price: Guide 3.1: £290.00 + VAT for educational use. Guide Reader: £52.50 + VAT. Guide Full Text Indexer: £695.00 + VAT. For site license details contact CHEST. Clarke & Associates, 100c Pittan Criaff Street, Dunfermline, Fife KY12 8AN Tel: +44 (0) 1383 622 200

Reviews: *The CTISS File*, 1990, **9**, 21-23.; Deegan, M., Timbrell, N., and Warren, L. *Hypermedia in the Humanities* (Universities of Oxford and Hull, 1992).

HyperCard 2.3

Permits disparate information (texts, pictures, sound, and QuickTime movies) to be linked together. The information it links can be stored within the Macintosh or it can be stored externally, for example on videodisks or CD-ROMs. The links are held on 'cards' (hence 'HyperCard'); the cards are themselves grouped into 'stacks'. Complex applications can be built with HyperCard using the programming language (HyperTalk) contained within it. Can be used as a 'front end' for applications containing great quantities of data. Authoring requires the full HyperCard Developer's Kit (comes complete with QuickTime Support, Apple Events Support, and Script Language Guide). To run HyperCard applications distributed by other people it is advisable to get the HyperCard Player. It is possible to convert files from HyperCard into ToolBook (to a certain degree) using 'Convert-It!'. For more details contact: Heizer Software (Tel: 1-800-888-7667; Fax: 1-415-943-6882).

Hardware and Software: Runs on Macintosh computers only (Classic or higher). HyperCard Developer's Kit: £72.50 (£127.50 for a Licence Kit). HyperCard Player: £14.50.

Softline Distribution Ltd, 123 Westmead Road, Sutton, Surrey SM1 4JH.

Icon Author v 7

A full-featured, multi-platform authoring system for non programmers to develop interactive multimedia applications. By seamlessly combining text, high resolution graphics, animation, full motion video and sound, users are able to build highly effective applications for computer-based training, interactive presentations, self-service terminals, electronic performance support, and commercial titles.

Macintosh, PC Compatibles (Win 3.1), variety of UNIX machines. 8MB RAM, CD-ROM, (other media too)

Knowledge Pro

A programming/authoring system with both an interpreter and C++ code producer (a separate compiler required). It can do most of what other authoring packages do, but involves programming almost from the start as there are fewer built-in facilities for generating screens, effects and so on. However, it is as flexible as standard high level languages such as C++, LISP and BASIC but is more powerful because many common programming tasks an author would need to undertake are achieved with just a few, very powerful, built-in functions in KPWin.

Multimedia Authoring

LoCAL: Creating CAL with Excel

Tutorial aimed at lecturers who wish to develop low cost CAL modules for their courses using MS Excel 5. It shows how features such as graphic objects, on-sheet controls and Visual Basic can be used to create CAL material with a graphical user interface, message and input boxes, and custom dialog boxes. About 8 hours of material. (TLTP project)

PC compatible (Win 3.1, 8MB RAM & MS Excel 5)

£12.50

Dr. Simon Heath, Centre for CBL in Land Use and Environmental Studies, MacRobert Building, King's College, University of Aberdeen, Aberdeen, AB24 5UA Tel: +44 (0) 1224 273 755 Fax: +44 (0) 1224 273 752

MacroMedia Director 5.0

Users can create, combine and synchronize graphics, text and animations with audio and video; add full interactivity with buttons and scripts; author, edit, playback, export and import QuickTime movies with enhanced Lingo scripting, incorporate 3D models from Swivel 3D, animation from MacroMind 3-D, sounds from MacRecorder, as well as all standard PC file formats. MacroMind Director includes Director Player for license-free production distribution and Accelerator for smoother animation playback. Director Players allow users to convert MacroMind Director productions created on the Macintosh for playback under Microsoft Windows or Silicon Graphics IRIS workstations with complete interactive control of CD-Audio and digitized sound. Compatible with Shockwave plug-in for Netscape Navigator. Afterburner plug-in allows compression of Director movies by 40-60%. Scripting language, Lingo, is now extended, with new debugger, up to 50% faster execution and nearly 100 new commands. Includes ability to hotlink from Shockwave movies to WWW URLs and to integrate text from the Internet into Shockwave movies.

Microcosm for Windows 3.0

Microcosm can be described as a multimedia information management environment or an open hypermedia system. The information – text, graphics, sound, and video – is stored independently in an unaltered form. Links between nodes of information are made almost automatically using the built-in linking facility which stores links in a personal database or 'linkbase'. This generic linking facility allows the integration of other Windows applications such as Guide, ToolBook, Superbase, and Microsoft Word. Developments will include automatic link creation using mark-up languages and full text retrieval techniques.

MM-Box 2 Multimedia Production Software

An entry-level interactive multimedia development authoring tools. Provides a low-cost entry into multimedia production for those with Windows experience, but who do not wish to become involved in programming. It allows for the simple building of a sequence of 'pages' which can contain text, buttons, graphics, sound, animations and moving video. Productions can be converted to ToolBook format, for further development. CD-ROM version contains 1,250 images (of which 250 are royalty free), 30 minutes of original CD-quality music, audio conversion tools, sound effects, animated clips, and a full copy of Paintshop Pro for image manipulation and conversion.

PC compatible (386+, Win 3.1, 4MB RAM) CD-ROM Price: Commercial £125; Academic £75; CD-ROM: Commercial £495; Academic £195 U/C/M Ltd., Paris House, Wilbury Villas, Hove, East Sussex BN3 6GZ Review: Alan Cawson 'Review of MM-Box 2' SocInfo Newsletter 13, 1993

Multimedia Authoring

Multimediods 1.0

For creating multimedia presentations and training packages on the Macintosh. Developers create mediods which are objects which structure the sounds, text, and movies in a flow chart sequence (similar to Authorware). End-users then play these mediods as either straightforward presentations or interactive training packages. Features include: colour text fields; sound playback and recording facilities; PICT display; QuickTime; keyboard and microphone responses; replay facilities; HyperTalk scripting; scan facility; and submediods.

Macintosh (microphone voice input, QuickTime 1.0, HyperCard 2.0 or the HyperCard Developer's Kit.)

Price: £89.50 plus VAT for educational use. Distribution licence: £49.50 plus VAT.

Terra Soft, Hispanic Studies Dept., University of Glasgow, Glasgow G12 8QQ.

Tel: +44 (0) 41-339-8855 x8311; Fax: +44 (0) 41-330- 4808;

E-mail: nls@lang.gla.ac.uk.

SuperCard v. 3.0

Allows you to author application media with the look-and-feel of either a HyperCard stack, a Director animation, a standard multi-windowed Macintosh application, or something completely new. Uses a superset of HyperTalk without any of the limitations of HyperCard. Full colour bitmap and drawing graphics tools and all objects can be scripted. Features include: script control of QuickTime Movies, extensive sound editing facilities, text to speech, Filmstrips for animations, hypertext, use of standard resource-based dialogs as well as SuperCard own system, built in ScriptTracer debugger, and it can produce stand-alone applications. Windows runtime program to be available soon. Roadster Internet Browser plug-in means that fully interactive SuperCard programs can be delivered over the WWW.

ToolBook v. 4.0

ToolBook's set of application development tools range from colour drawing tools to a programming language, and include hypernavigation capabilities, animation features, and text formatting. Record fields, a special kind of ToolBook text field, are used to create flat-file databases. Multimedia ToolBook includes all the features of ToolBook plus new powerful tools to incorporate external media sources such as audio in digital (WAV), MIDI and CD-Audio format and video in digital (AVI), Videodisc or Videotape format. It also supports Autodesk Animator FLC files. ToolBook CBT Edition is a superset of Multimedia ToolBook. It includes special additions for creating effective Computer-Based Teaching resources. These include: new objects, new functionality, a student tracking and scoring system, a course management system and improved hyperlinking. It is possible to convert files from HyperCard into ToolBook (to a certain degree) using 'Convert-It!'. For more details contact: Heizer Software (Tel: +1-800-888-7667; Fax: +1-415-943-6882).

PC compatible (Win 3.1, 4MB RAM, 2- 8MB HD, 20-30 MB for Multimedia ToolBook, CD-ROM) CHEST Educational prices (retail prices in brackets): ToolBook £99.00 (£179.00); Multimedia ToolBook £399.00 (£799.00); CBT ToolBook £599.00 (£1199). Testing

Testing

Examine

A multiple-choice authoring and delivery system for use either as an adjunct to courseware or as a standalone means of on-line self-assessment. A number of question types are supported, as well as graphics and multimedia. There is also support for the Microcosm hypermedia system developed by Southampton University. A prototype of Examine (PC only) has been widely distributed, but a major new version (Macintosh and PC) has recently been developed.

GAME

A software package for interactive test development, data collection, research and output. The install part of GAME handles the creation of a re-usable test. The collect concerns test presentation and storing of data. Game's research part handles descriptive statistics and several kinds of output.

PC compatible \$250 (educational price), \$375 (non-educational) iec ProGAMMA, Grote Rozenstraat 15, PO Box 841, 9700 AV Groningen, The Netherlands Tel. +31 50 363 6900 Fax. +31 50 363 6687 E-mail gamma.post@gamma.rug.nl http://www.gamma.rug.nl

Interactive Assessor

This package can be used to develop and generate tests using text and drawing tools. Questions can be categorized by subject and graded for difficulty. The runtime version presents selected tests to students and records students marks. Reports on student performance can be transferred to spreadsheet format. Tests can be run on networked or stand-alone PCs.

PC compatible (Win 3.1) £495 + run time licence (typical dept. licence £350) EQL International Ltd, Scottish Software Partner Centre, South Queensferry, West Lothian, EH30 9TG E-mail: 100103.3504@compuserve.com

Multitest 1.03

MultiTest is a Windows-based Multiple Choice Assessment package which is designed to work with an optical mark reader. The package includes the choice of pre-printed answer sheets for 60, 120 and 200 questions. The results can be exported into other

windows packages or analysed in MultiTest. The package has data transfer rates of up to 4000 sheets per hour.

PC compatible £895

Quisitor Test 1.0

Create your own tests or use one of the many tests provided for Quisitor. There are three methods to build a test: randomly, by certain criteria, or by learning objective, which allows users to select chapter-specific learning objectives in the search. You can add, edit, sort, and create customized tests, including matching, fill-in, multiple-choice, openended, true, false and essay. The program also allows you to change a multiple-choice question to an open-ended question. In addition to creating your own tests, each predesigned test bank contains over 500 multiple-choice questions on specific subject matter.

ClarisImpact 2.0

Like a spreadsheet, ClarisImpact can create a variety of diagrams from numerical data. It does diagramming best but also includes good-looking table, presentation, drawing, word processing, and outline modules. ClarisImpact has a strong set of highly specialized tools for building org charts, flowcharts, and time lines. When you select a position (or job description) from the org chart, handles appear that let you add a manager, coworker, subordinate, or assistant with a single click. Each position automatically obtains the color, outline, shadow, and text style assigned to its level.

Macintosh & Power Mac, PC compatible Win 3.1, 95 and NT (comes with Win32s) (386 or better, 4MB RAM, 10MB HD - Win 3.1; 8MB RAM, 10MB HD Win 95).

CHEST price £64.50
Claris, 1 Roundwood Avenue, Stockley Park, Uxbridge, Middlesex. UB11 1BG
Tel. +44 (0) 181 756 0101 Fax: +44 (0) 181 573 4477

Compel v. 2.0

A presentation package, Compel displays a standard icon-oriented interface, uses the basic slide-show metaphor, and has an outline view. Although Compel, a 16-bit application bundled on a CD-ROM, runs on Windows 3.x and Windows 95, it is not fully Windows 95-compliant. When you start Compel, you have four options: create a new presentation, open an exiting presentation, access the Presentation Specialist (where you'll find automated content templates), or use the StartUp Assistant (a basic tutorial). There is no step-by-step guidance during your presentation creation. There is multimedia integration with the Edit Playlist and Playlist Browser. You can import .WAV, .AVI, and MIDI files, and Compel include a time line.

PC compatible with Win 3.1 (386 or better, 4MB RAM, 8MB HD)

Igor Pro v. 3

Designed to deal with larger data sets, powerful data analysis, or to control the fine details of graphs for publication. On a Power Mac, creating a graph with 200,000 data points takes just two seconds. New Features of IGOR Pro 3 include: full support for multi-dimensional data (up to 4 dimensions), arrays of text strings, image plots, contour plots, and category plots. Two dimensional, gridded data can be viewed with the Surface Plotter. Three dimensional (volumetric) data can be viewed with the Graphical Slicer. New math operations include matrix math, image processing and multi-dimensional FFTs. IGOR Pro is fully programmable. Export graphics as Encapsulated PostScript (EPS) files, which are easily inserted in most word processing applications. Supports Apple Script.

Macintosh (4MB RAM, System 6.0.7 + & HD). Accelerated for Power Macintosh. \$495 (\$346.50 academic) WaveMetrics, Inc., P.O.Box 2088, Lake Oswego, OR 97035. USA Tel: (503) 620-3001 Fax: (503) 620-6754 sales@wavemetrics.com/Products/IGORPro/ipro3demo.html http://www.wavemetrics.com/

Graphing & presentation

Kaleidagraph v. 3.08

For analyzing very large amounts of data. KaleidaGraph imports data and allows users to mathematically analyze the data with a programmable macro calculator and algebraic formula entry. The resulting data may then be transformed in a high-resolution publication-quality graphic, using any of 16 plot types, with very precise user control of plot elements. Features include: Plot Scripting; a Library function allows users to assign variable names to anything from a constant to a very complicated algebraic expression; a Table Tool allows users to annotate any plot with tables; Mixed Line/Column plots for line, scatter, double-Y, probability, X-Y probability, column and bar plots.

Microsoft PowerPoint for Windows 95

Powerful tools to help create really impressive presentations, easily. This new version enables you to incorporate animations, sound and video to bring your presentations to life. Presentation conferencing lets you review presentations with your remote workgroup simultaneously over the network. The 'Pack and Go Wizard' automatically packages your presentation to multiple disks so it is completely portable.

PC compatible with Win 95 CHEST price: £146.00, 1 Licence Price: £102.00 Akhter Computers Ltd, Akhter House, Perry Road, Harlow, Essex, CM18 7PN Tel: +44 (0) 1279 821200 Fax: +44 (0) 1279 821300 http://www.microsoft.com/

Norton Presentation Maker

This gives the user an easy to use environment to create multimedia presentations. It will allow the lecturer to assemble electronic illustrations, photographs, animations, simulations, digital movies and video clips and to display them with their class. The program is in two parts a presentation editor for the creation of presentations and a viewer to display them.

PC Compatible, Mac Free on adoption of Gleitman "Basic Psychology" or "Psychology" texts as recommended course text. Information about Gleitman' and Interactive Psychology available via WWW W.W.Norton, 10 Coptic Str, London WC1A 1PU Tel. +44 (0) 171 323 1579 Fax. +44 (0) 171 436 4553 http://www.wwnorton.com/norton/grip.html

Presentations

A presentation package that integrates with other programs in Novell's PerfectOffice suite which includes WordPerfect 6.1 and Quattro Pro 6.0. Presentations includes a context-sensitive toolbar and the Power Bar, which lets you quickly change fonts, slide templates and backgrounds, and edit modes. You can create a new slide show based on one of the 66 slide masters (191 on the CD version). The charting engine can create 66 2-D and 60 3-D charts, ranging from basic bars and pies to radar and surface charts. Drawing features include the ability to warp and blend objects, turn 2-D graphics into 3-D, convert text to curves, trace bitmaps, and scan directly into a slide show.

PC compatible with Win 3.1 (386 or better, 6MB RAM, 28MB HD, Win 3.1 or later)

SmartDraw Pro

For drawing flowcharts, diagrams and other business graphics. Includes more than 1300 pre-drawn shapes and symbols that you simply drag onto your drawing. Shapes and lines automatically line up with snap-to grid and other alignment tools. Lines and curves that connect shapes together stay connected, even when you move the shapes. SmartDraw is an OLE client and server. This means that you can run SmartDraw from inside Microsoft Word, Excel, Lotus 123, WordPerfect and any other OLE Client program.

PC compatible (386 or better PC, 16 Bit Win 3.1 v. and 32 Bit Win 95 v., 9 MB HD. \$49. (COMBO Pack contains both 16 bit v. and 32 bit versions)
The Educational Edition has the full feature set of SmartDraw Pro, but only a subset of the 1350+ SmartDrawings (shapes). \$20 per user, with a minimum 5 user licence.
SmartDraw Software Inc., 9974 Scripps Ranch Blvd, #35, San Diego, CA 92131, USA

Visio 4.0

Visio lets you create diagrams either manually by dragging shapes and connecting lines from a palette or by the automated method, importing a data file that automatically converts into org or flowcharts and time lines. Visio builds its interface on toolbars, shape palettes, and pop-up menus. The smart connector tool brings together the shape that you drag into a diagram and the last shape you selected. If you move a shape, Visio moves its connecting lines from one anchor point to another. To build a diagram automatically, simply run one of the supplied wizards: They build diagrams from spreadsheet or text files. Both 16- and 32-bit versions are supplied.

PC compatible (386 or better, 4MB RAM, 8MB HD, Win 3.1 (16-bit); 386 or better, 8MB RAM, 8MB HD, Win 95 or Win NT 3.51 (32-bit))

Writing and research tools

There are two kinds of software covered in this section, programs to manage bibliographies and references, and speech recognition packages. Bibliography managers are forms of databases specially modified to handle all kinds of references. They usually assist the construction of references by automatically generating bibliographic lists in appropriate formats from embedded indicators in the main text. Bibliographies can be automatically reformatted to suit another publication. Some packages come with software to translate files taken from CD-ROM-based bibliographies, such as Sociofile.

Speech recognition packages are relatively new. They use a high quality microphone and sometimes dedicated hardware to convert spoken words into typed text directly in your word processor. Expect the kind of accuracy familiar from optical character recognition programs a few years ago. Look out for the ability to understand UK English!

AutoBiblio for Apple Macintosh v. 2.0

AutoBiblio Version 2.0 stores references and enables their selection, recall and printing in the format required by any journal. You can create your own database of literature references and automatically incorporate those cited in your papers in the bibliography listing. A major feature of this version is a facility to store abstracts of papers in the database. These can be keyed in or automatically downloaded from other databases. Many other improvements have been made and the speed of operation significantly improved.

Macintosh £99 (Demo, £15) Biosoft, 49 Bateman Street, CB2 1LR, Cambridge, United Kingdom Tel: +44 (0)1223 368622 Fax: +44 (0)1223 312873 E-mail: ab47@cityscape.co.uk http://www.cityscape.co.uk/biosoft

Dragon Dictate

A speech recognition system that instantly converts what you say into written text on your PC screen. You can start dictating immediately, using speaker-independent models. Dragon Dictate for Windows then adapts to the way you talk while you dictate. Dictate, edit, move and format text or data directly into most Windows applications. Comes with more than 4500 macros, including commands for surfing the Internet and integrated 120,000 word vocabulary which can be expanded to 180,000 words with specialist terms. Singles Edition works with just one application (+ Netscape Navigator). UK English version available.

PC compatible (486/6, Win 3.1, 95, NT, sound card and microphone) \$395 to \$695 (\$99 for Singles Edition) Dragon Systems, LTD, Millbank, Stoke Road, Bishops Cleeve, Cheltenham, UK, GL 52 4RW Tel: +44 (0) 1242 678 575 Fax: +44 (0) 1242 678 301

Writing and research tools

VoiceType Dictation for Windows 95

Speech recognition system which can input text directly into Windows applications. Speaker independent which assures more than 90% accuracy for most people right out of the box, but continues to learn from you as you use it. Accepts dictation faster than most people can type - 70 to 100 words per minute. Provides a pop-up dictation window for applications that are not speech enabled. Lets you use voice commands to control the computer. 22,000-word base vocabulary, plus a customizable, 42,000-word personal vocabulary. Add ons to support languages: French, German, Italian, Spanish, U.S. English, and UK English.

PC compatible (90Mhz. Pentium & 256KB level 2 cache or faster, Windows 95 SoundBlaster compatible card) £585 to \$699 IBM United Kingdom Limited, PO Box 41, North Harbour, Portsmouth, Hampshire PO6 3AU Tel: +44 (0) 1705 492249 http://www.software.ibm.com/is/voicetype/vt3_uk.html

Kurzweil VOICE for Windows Rel. 2.5

Supports voice input for navigation, which drives the Windows O/S and applications on a command and control basis, and dictation, which enables the user to create text and enter data simply by speaking. Available in two editions. The Personal Edition comes with a 30,000 word vocabulary, while the Professional Edition has a 60,000 word vocabulary. Both include an on-line dictionary, including acoustic models and spellings, for a total of 200,000 words. You can customize both editions by adding thousands of your own words and commands.

PC compatible (486 DX4/75 +, Win. 95, 8MB RAM, 16MB for Pro Edn., 35MB HD, Sound card, microphone) \$495 to \$695 Kurzweil Applied Intelligence, 411 Waverley Oaks Road, Suite 330, Waltham, Massachusetts 02154 USA Tel: +1 617 893-5151 Fax: +1 617 893-6525

EndLink v 2

A tool that allows EndNote users to download information from on-line bibliographic databases. Use one of the pre-defined files or create a new one to input virtually any tagged format file.

Macintosh (512 KB RAM, 1MB HD), PC compatibles (MS-DOS & Win 3.1, 512 KB RAM, 6MB HD). CHEST price £99, multiple packs reductions available Cherwell Scientific Publishing, The Magdalen Centre, Oxford Science Park, Oxford OX4 4GA Tel: +44 (0) 1865 784800 Fax: +44 (0) 1865 784801 E-mail: Endnote@cherwell.com http://www.cherwell.com/cherwell http://www.niles.com

EndNote Plus v. 2.2

A bibliographical database manager storing up to 32,000 references, a bibliography maker, and a bibliography citation formatter. Scans documents for in-text citations and reformat them according to MLA, MLA Note, Chicago, APA, or over 200 other styles, and builds a concluding bibliography. Works with several word-processors as a standalone package, a desk accessory or as a built in module for MS Word 5.1 for Mac and Word 6/7 for Mac and Windows. EndNote Plus provides full searching capabilities and also allows users to find (and delete) duplicate references. With the new HTML formatting style EndNote can be used to take advantage of HTML features, creating hypertext links between in text citations and the references in a bibliography. It can also be used to link the bibliographic references to full text articles or other related information available on the Internet. A free copy of the HTML style for Win. or Mac available to download and use with EndNote Plus.

Macintosh (512 KB RAM, 1MB HD), PC compatibles (MS-DOS & Win 3.1, 512 KB RAM, 6MB HD). CHEST prices £139.00 (EndNote); £229.00 (EndNote Plus); multiple packs available Cherwell Scientific Publishing, The Magdalen Centre, Oxford Science Park, Oxford OX4 4GA Tel: +44 (0) 1865 784800 Fax: +44 (0) 1865 784801 E-mail: Endnote@cherwell.com http://www.cherwell.com/cherwell http://www.niles.com There is an EndNote discussion list called EndNote at listserv@ucsbvm.bitnet.

Papyrus

Bibliographic package with five flexible record types and 8,000 characters per field. Any number of extra notecards can be added per reference (each of 8,000 characters) - these cards can subsequently have keywords attached. Comes with a good range of predefined formats plus facilities to edit your own. Manchester University have defined some extra ones specifically for BIDS which come free with the CHEST software and

Writing and research tools

are available (with others) via ftp://ftp.in.umist.ac.uk/pub/papyrus/. Papyrus can scan documents for citations and reformat them accordingly.

Social Science Information Sources

The following sections include software and resources which will be of specific interest to teachers in politics, sociology and social policy. This includes quite a wide range of CD-ROMs including bibliographic sources, collections of newspapers, texts and other documents and data sets from various surveys and censuses.

Bibliographic

AgeInfo - CD-ROM

Provides a unique single source of essential information in the field of social gerontology. It contains information from all parts of the world but with particular emphasis on the United Kingdom and Europe. Contains CPA's extensive bibliographic collection, its database of organisations working in the field of ageing, plus a calendar of meetings, short courses and other events related to the field. Provides search software for DOS and Windows, and a more powerful search interface for information professionals.

PC compatible (MS DOS v. 3.3 +, 640KB RAM, 2 MB HD; Win 3.1 & 3MB HD) Annual subscription, £600 per year + VAT (single user version) for 4 issues ISSN 1358-1376.

Centre for Policy on Ageing, 25-31 Ironmonger Row, London EC1V 3QP Tel: +44 (0) 171 253 1787 Fax: +44 (0) 171 490 4206

ASSIA Plus

The Applied Social Science Index and Abstracts (ASSIA) provides excellent coverage of the applied social sciences. It brings together practical social issues from a wide range of sources underpinned by the core material from sociology and psychology. ASSIA Plus includes the complete ASSIA backfile (1987 to date) which contains about 100,000 records, providing easy access to over 550 English language social science titles.

SOSIG

The Social Science Information Gateway (SOSIG) provides easy access to high quality information sources on the Internet. The proliferation of networked resources is causing increasing problems for users to locate and retrieve relevant information. SOSIG aids the process of navigation by collecting and organizing valuable social science resources available over the Internet. Currently over 1,400 resources have been described, classified and entered into a searchable database. Of course there are many millions of electronic resources in the world but as a user recently said in an unsolicited E-mail: "Given the amount of information on the net, the real value of a resource such as yours is, paradoxically, not that it is comprehensive but that it is selective of high quality resources".

http://sosig.esrc.bris.ac.uk/

The Economist

Up to four years of The Economist with reporting, commentary and analysis on world politics, business, finance, science and technology and the arts are contained on one CD-ROM. Two archival discs contain 1987-1990 and 1991-1994. The current disc, issued quarterly, covers 1995 onwards. Selected graphics such as maps and graphs are included from January 1992 and the useful Economist Index from January 1991.

SocInfo Services

SocInfo offers a comprehensive service to all academics teaching sociology, social policy and politics in UK higher education institutions.

The service includes:

- **Offering information and advice,**
- Hosting seminars and workshops,
- Publishing regular newsletters and software catalogues,
- Reviewing software, courseware and hardware,
- Providing opportunities for software demonstrations and hand-on experience,
- **Advising on courseware development,**
- Running the Mailbase discussion list: socinfo@mailbase.ac.uk,
- Maintaining a World Wide Web site at: http://www.stir.ac.uk/socinfo/

Data sets

1991 Census LS Link Database

This unique database is a representative 1% sample of the population of England and Wales incorporating information over 20 years and three census points. The sample gives information on over 700,000 individuals and linked data spanning the 1971, 1981 and 1991 Censuses for around 350,000 people. The aim of using an integrated database is to facilitate access to data through speedier production of files tailored to researchers' particular requirements. Security of data is a prime concern, so in addition to the usual strict confidentiality protocols in operation for the LS, Model 204 supplies a comprehensive security system down to field level on sensitive variables. Access to the database will initially be through a utility which accesses individual datafiles, producing extracts which may be merged using statistical analysis package SAS.

OPCS welcome further interest in the data and potential users are advised to contact: Jillian Smith, Head, Office of Population Censuses and Surveys, OPCS LS Unit, St. Catherine's House, 10 Kingsway, LONDON WC2B 6JP

1996 Almanac of American Politics

On-line version of the definitive guide to the American political scene. Written by Michael Barone and Grant Ujifusa and published by National Journal, the Almanac provides colorful profiles and insightful analysis of all members of Congress and Governors - and the people and politics of their districts and states. On Politics USA, the Almanac is searchable and updated frequently.

A Handbook of Small Data Sets

Edited by D.J. Hand, F. Daly, A.D. Lunn, K.J. McConway and E. Ostrowki (Department of Statistics, The Open University, Milton Keynes, UK). The book has 510 data sets, which are included in a diskette with the book. The book has two indexes: (i) a subject index which contains keywords describing the application domain - the technical area and the problem from which the data arose (ii) a data structure index which describes the data sets in terms of: number of independent units, number of measurements on each unit; a categorization of the variables measured; an optional supplementary word or phrase describing the structure in familiar terms.

Published by Chapman & Hall. ISBN 0-412-39920-2.

BHPS Data for Teaching

The British Household Panel Study data are ideally suited for use in teaching. BHPS data are available from the ESRC Data Archive in a number of formats, chiefly as a SIR

Data sets

database or as SPSS or SAS files. Documentation is provided in computer-readable format from the Archive, or as a hard copy User Manual. To obtain information to help you with analysis of BHPS data, contact John Brice at the Centre.

British Election Studies Information System - BESIS

A compilation on CD-ROM of data and documentation from British general elections, 1964 to 1992. The database was compiled and designed by Richard Topf. Free-text searches of all the questions used in all the surveys can be made, or hierarchical pathways may be followed to view particular sets of questions, tables of time-series, or marginal frequencies for all variables listed. There are also graphs or charts for all key variables. A bibliography of publications based upon these data is provided.

PC compatible (Win 3.1+, 95 and NT, 8MB RAM, (12MB for Win 95/NT), 30MB HD). Users with Microsoft Access may run BESIS direct from the CD-ROM. £350 plus VAT

Published the Data Archive, University of Essex Richard Topf, Department of Politics and Modern History, London Guildhall University, Calcutta House, Old Castle Street, London E1 7NT Tel: +44 (0) 171 320 1140 Fax: +44 (0) 171 320 1157 E-mail topf@lgu.ac.uk

Data on the Net

A searchable or browseable collection of Internet sites which includes 217 sites that have numeric data ready to download, 60 catalogs and lists of data from data libraries, archives, vendors, 77 data Libraries and Data Archives worldwide and 35 organizations that sell and distribute data for a fee.

University of California, San Diego http://odwin.ucsd.edu/jj/idata/

Ethnic Minority Data Archive

The purpose of this Archive is to facilitate research into, and the dissemination of knowledge about, the situation of ethnic minorities in the UK. The Archive assembles data relating to socio-economic characteristics of ethnic minorities and analyzes ad hoc surveys concerned with the situation of these groups.

Centre for Research in Ethnic Relations, University of Warwick, Coventry CV4 7AL UK http://www.warwick.ac.uk/WWW/faculties/social_studies/CRER_RC/menu.htm

General Household Survey 1979 subsample

The GHS is an annual survey of UK households about a variety of information about their activities. This dataset is a subsample of 2,000 from the full GHS survey of 1979.

OECD Health Data 96

OECD Health Data v1.5 is essentially a database about the health systems of its 24 member countries since 1985. It allows the user to manipulate both the data and its presentation. It contains 400 variables organised into groups or chapters which cover OECD's core interest in health spending and sources of finance at some length, but also include information about health facilities, employment and utilization as well as framework variables such as demography, life expectancy, mortality and morbidity and a selection of socio-economic indicators. Simple query and instant napping functions offer straightforward ways of extracting data.

SSDAN

SSDAN (Social Science Data Analysis Network) is funded by the NSF and the Department of Education (USA) FIPSE to help college teachers introduce "user-friendly" analysis of census data in their classes. Tailor-made data sets, from the 1950 to 1990 US Censuses, can be used in a variety of social science classes dealing with topics such as: race-ethnicity, immigration, gender studies, marriage, households and poverty, US income inequality, children, the elderly and others. Census data sets can be accessed with Chipendale software in both IBM and MAC formats

Startup package - free. E-mail to William.Frey@umich.edu William Frey, Director SSDAN, Population Studies Center, South University Avenue, Ann Arbor, MI 48104 http://www.psc.lsa.umich.edu/SSDAN/

The 1991 Census on CD-ROM

Combines statistics with mapping at all geographic levels and new software developed specifically for the analysis and presentation of census material. It contains Small Area Statistics (SAS) for enumeration districts, wards, districts and counties in England and Wales and for equivalent areas in Scotland and Local Base Statistics (LBS) for wards, districts, and counties in England and Wales and for equivalent areas in Scotland, including the 100% and 10% statistics for both SAS and LBS. Vector boundary mapping is available for enumeration district and all higher levels. The census is supplied with Supermap v. 4.5. Users can produce tables, graphs and maps, combine census variables to create new statistics and import their own data for presentation using the Supermap facilities. There are special editions of The 1991 Census on CD-ROM. The Health Service Edition aggregates the statistics and maps by Health Authority Districts and Regions and Health Boards and the Local and Central Government Edition by Counties and Regions. There is also a special Schools Edition available to schools and FE colleges, which contains more than 1,300 variables selected specifically for their relevance to the national curriculum.

The British Social Attitudes Surveys, 1983-89

Each year (except 1988) the Social and Community Planning Research (SPCR) has run a survey to measure overall movements in attitude, based on interviews with a representative sample of around 2,500 adults from the British population. This CD-ROM, issued by the Data Archive, includes the data from all the surveys from 1983 to 1989. Data are in SPSS card image format with an SPSS export file and a codebook. Disk can be read by MS-DOS, UNIX and Macintosh systems and the files can be imported into the respective versions of SPSS.

Data Collection

These are programs designed, in the main to collect data from questionnaire surveys. There are two main types of these, programs that generate the questionnaires on screen and into which data is entered or those designed to take questionnaire input from scanned documents. The former includes Computer Assisted Personal Interviewing (CAPI) where interviewers use the program on a laptop as they interview the respondents and Computer Assisted Telephone Interviewing (CATI), where the respondent is interviewed by telephone. Some programs also support Computer Assisted Self-Administered Questionnaires (CASAQ) where respondents complete questionnaires on publicly accessible terminals. The latest version of this is surveys on the Web, where respondents fill in a form on a Web page.

The second type of program focuses on taking input from scanned questionnaires. This relies on Optical Mark Recognition (OMR) where the program recognises which boxes etc. the respondent has selected. Both types of program often also include modules to analyse the data and produce statistics and graph of results.

ABstat DOS: 7.2 Windows:1.9

Questionnaire analysis and statistics: Survey question types include multiple-choice, all-that-apply, numeric, open-ended. Fully labeled banner and stub report. Easy question setup with reusable choice-tables. Use your own coding schemes. Recode data to convert numeric data to ranges or change coding schemes. For paper-and-pencil or On-Screen administration. Also available for telephone surveying and surveys on the World Wide Web. Statistics include descriptive, t-tests, correlation, stepwise regression, unequal n ANOVA, several non-parametrics.

ACA

Adaptive Conjoint Analysis, Version 4.0. Conjoint Analysis is used to measure the perceived values of specific product features, to learn how demand for a particular product or service is related to price, and to forecast what the likely acceptance of a product would be if brought to market. The ACA System contains all you need to execute a conjoint study: The Interviewing Module which can handle up to 30 attributes, each having as many as nine levels. ACA comes in two sizes: ACA 10 for studies with up to 10 attributes, and ACA 30 that will handle up to 30 attributes.

Data Collection

CBC v. 1.2

Choice-Based Conjoint (CBC) is used for discrete choice modeling, a research technique which is growing in popularity. CBC is different from other types of conjoint analysis in that the respondent expresses preferences by choosing concepts from sets of concepts, rather than by rating or ranking them. Most conjoint methods are based on "main effects only" models. In contrast, CBC automatically evaluates all two-way interactions. CBC interviews are usually computerized surveys but can also be paper-and-pencil based.

Qdata

A flexible and powerful freeware program for data entry and management of small to medium sized data sets. It was designed to work with other packages. Once you have defined your variables and entered your data, QData can write data definition and data files for SPSS and SAS, and will also write dBASE and ASCII files. It will also automatically generate codebooks. The program works in the other direction as well -you can load SPSS/PC system files, SAS transport files, dBASE files or, after defining the variables, ASCII data sets. You can then modify or add to these data sets.

Question Mark Designer for Windows v. 2.1

A program for computerized testing and assessment with three parts. Using the Designer program, you can design questions and put them together in tests; using the Presenter program, you deliver them to your users; and using the Reporter program, you can collate and analyse the responses. The software allows control of colours, fonts, layouts and graphics: questions can be on any topic, using various formats including multiple choice, text answer and a unique graphic 'hot spot' type that people answer by clicking on the correct section of a map or other visual image. Multimedia resources can be introduced. There are full branching capabilities. An additional module, Graphics Companion, enables snapshots from other programs to be included in questions.

Question Mark for Macintosh v. 2

Runs on any modern Macintosh computer, including the PowerPC. You can create questions in multiple choice, numeric, fill-in-blanks, free format text, and explanation frameworks. You can include graphics pasted in from other applications in questions. It offers the facility to create tests with up to 500 questions of 8 different question types, a variety of ways of presenting tests (including graphics in questions), of providing feedback, and marking and analyzing tests.

Macintosh (System, 6.07, 1MB RAM) CHEST price £249

Question Mark Network Guardian

This package is an add on program to Question Mark Designer (version 2.10 or greater) and will not stand alone. It allows the user to control and secure access to tests created in Question Mark Designer. It is primarily aimed at those users who wish to control which students have access to which tests and when and how many times they may have access. This makes it possible to obtain examination-style conditions for a group of users being tested over a network and possibly at different times without the costs of invigilation.

PC compatible

CHEST prices £399 (single user), £625 (dept. licence), £6250 (full university licence) Question Mark Computing, 5th floor, Hill House, Highgate Hill, London, N19 5NA, UK Tel: +44 (0) 171 263 7575 Fax: +44 (0) 171 263 7555

Question Mark Professional for DOS v. 3.01

A program for creating, delivering, and analyzing objective tests. Testing formats are: Multiple Choice, Numeric, Gap Filling, Word Answer, Free Format, Ranking/Matching, Multiple Response, and Explanation. It offers the facility to create tests with up to 500 questions of 9 different question types, a variety of ways of presenting tests (including graphics in questions), of providing feedback, and marking and analyzing tests. Add-ons - Multimedia Editor (allows the Question Mark tests to call up other programs - £199.00) and Report Generator (allowing analysis of test results - £199.00).

Question Mark Web

For running tests and assessments on the World Wide Web. Allows rapid and simple question design on a Windows PC. Once designed, tests can be E-mailed to students or uploaded on to the World Wide Web. Students enter responses on any computer with a Web browser that supports forms and the answers can then either be E-mailed back for marking or marked on-line on a Web server which gives the option of instant feedback.

PC compatibles (486 or better recommended,4 MB RAM, Win. 3.1, and HD) CHEST price £199 plus VAT, Site licence, £199.

Remark Office OMR

Optical mark recognition package. Design your questionnaire in any word processing or DTP package. Completed questionnaires are then scanned and the data are automatically read as an SPSS data file. It can process data from surveys, etc. that use fill-in bubbles or check boxes. It also reads a number of barcode formats including Code 39, Codebar and Interleaved 2 of 5. Handwritten comments can be viewed in image fields and entered online. Supports wide range of scanners including Canon, Microtek, Hewlett-Packard, Epsom and UMAX.

PC compatible (386 or better, Win 3.1, 10MB HD)

£395

SPSS UK Ltd., 1st Floor, St. Andrew's House, West Street, Woking, Surrey GU21 1EB Tel. +44 (0) 1483 719201 Fax. +44 (0) 1483 719290

ScreenSurvey

Software which automatically administers questionnaires on computer users' screens. The questionnaire takes the form of a "window" that appears over other open applications. The individual questions are designed using the "Form Builder" software, which allows complete flexibility in the placing of items on the question forms, their size and their colour. Graphics can also be placed on the forms to illustrate a question, or as a custom background. Questions can have one of four response types: single and multiple item, scale and open-ended. Filtering is supported. The responses are stored on the hard disk and are easily accessible by spreadsheet or statistical analysis packages.

Sigmund

A three-part computer program for conducting structured interviews. The first part is used to create the basic questions for a structured interview, qualitative analysis survey instrument. The second part presents the interviews to research subjects on their own computers. The third part allows the researcher to manipulate the collected responses of the subjects in a variety of ways to aid analysis.

SNAP Professional v. 4.0

Questionnaire design and analysis software. Version 4 includes WYSIWYG on screen design and printing and user control over styles of questionnaires, tables and charts

Data Collection

Analysis includes frequency tables, cross tabulations, grid tables, hole counts, descriptive statistics and over 30 types of charts all of which can be filtered and weighed. SNAP advises researchers on the use of over 200 different forms of statistical analysis including hypothesis or significance tests. "Consult" mode, uses AI strategies to recommend appropriate techniques. "Browse" mode supports over 200 descriptions of analysis techniques and hypertext definitions and examples of statistical terms.

PC Compatibles, Win, 4MB RAM, also OS/2, Win 95 and Win NT. Review: Kate Bloor, University of Portsmouth, SocInfo Newsletter, 20, 1996

Surveys and Questionnaires

A collection of programs designed to assist in the construction of questionnaires or marketing surveys. The question and possible response appear on the screen and the actual response is prompted (ideal for telephone surveys). The response data can be categorized according to multiple criteria. The data can be analyzed in detail, response levels equal, above or below some specified levels can be obtained, correlations between questions an so forth. Finally, the data are put in summary form.

TELEform

Combines form design with hand print, machine print, bar code, and optical mark recognition to automate data collection. Using the combined strengths of facsimile, scanner and computer technologies, TELEform v. 4 enables you to create forms for collecting data, distribute them via fax or mail, then automatically interpret data using a fax card, fax server or scanner. Version 5 is a Windows 95/NT application with new form design features, sophisticated data validations and enhanced image pre-processing, database mapping and scripting validations. French and German versions available.

TestHelper

A multiple-choice questionnaire construction set. It automates the administration and scoring of multiple-choice questionnaires. You enter the item content, item weights, subscale names, scoring key and other test parameters and TestHelper will construct a questionnaire on the computer. The program will administer the test, compute sub-scale totals and standard scores, plots subscales and saves scores for future reference.

Data Analysis

By far the greatest variety of programs available to the social sciences is of those supporting the analysis of research data. Of course, many of these are statistical packages and because there is a wide market for such programs in the social sciences, natural sciences and business, they are now very well designed, robust and well-supported. Many are available on CHEST deals which allow universities to pay for a single site licence or at least give reductions for installations in labs.

There are roughly three kinds of statistics packages: the comprehensive (supporting a very wide range of statistics and graphs), the specialist (supporting new or unusual statistical techniques), the innovative (usually based on visual or exploratory data analysis techniques). The latest "in thing" for statistics packages seems to be supporting all stages of the analysis and write up, from data cleansing through to producing polished and illustrated research papers.

Perhaps the biggest flowering of new software in the last 15 years has been in that supporting various forms of qualitative analysis. There is a much greater variety of approach in these packages, compared with statistics programs. That is reflected in the subsections below. However, to some extent these placings are arbitrary, and you might well object to some of the classifications. Most programs can be used in a variety of ways and that makes clear classification difficult. It is now possible to select the program you need to support your particular kind of analysis, though as many qualitative researchers complain, this is often at the cost of having to learn to use yet another piece of software.

The sheer variety and rapid growth of qualitative programs brings with it a less desirable feature. Whereas in most cases it is possible to transfer data from one statistics package to another (even if that means using the lowest common denominator tab-separated text format) this is rarely the case in qualitative packages. Most of the time all you can transfer is the plain text you started with; coding schemes etc. are not usually transferable. This makes the selection of appropriate software from the start much more important.

Again, in contrast to statistics software, qualitative data analysis packages are addressing a much smaller market, and thus are less well supported and developed more slowly. Often they are produced by the same researchers who use them for analysis in their own work. In most cases, therefore you cannot expect the same degree of support as in statistics programs. On the other hand it does mean that programs are more likely to reflect the kinds of analysis that social scientists actually undertake.

For more details of the key packages and short articles by Nigel Fielding on them see the CAQDAS web site: http://www.soc.surrey.ac.uk/caqdas/ There is also a review of content analysis programs - Evans, William (1996) 'Computer-Supported Content Analysis' *Social Science Computer Review* **14(3)** pp. 269-279.

Statistical

ADE-4 v.4 Analysis of Environmental Data

ADE-4 is a multivariate analysis and graphical display package. A series of multivariate techniques permits the analysis of several types of data (e.g., quantitative, qualitative, presence/absence). Includes the most recent developments in multivariate analysis such as one-table, two-table, and K-table techniques, and many graphical display methods. The basic documentation(ADE Quickstart and ADE HyperCard interface) is also freely available on the Internet .

BMDP Diamond

"A picture says a 1000 numbers." Developed in 1993 by IBM it is a 'Multifaceted Visualization Tool' for exploring relationships in multivariate data. Its main aim is to provide a platform for depicting data and statistics with pictures, and then manipulating the pictures to rapidly develop insight. Use with your current statistics package to clean and transform data and visually check assumptions prior to hypothesis testing or modelling and to understand your data better before carrying out any formal analysis.

Review by John Newell University of Glasgow, Maths & Stats Newsletter, May 1996

BMDP New System for Windows version 1.1

For basic statistical methods. Included features are: descriptive statistics, missing data, t-tests, nonparametric tests, ANOVA, frequency tables, and regression. Context-sensitive help for programming and statistical information. Contains spreadsheet-like data entry options and interactive high resolution graphics. Data can be entered in a datasheet or frequency table; variables can be inserted, modified or deleted. Results are linked to the datasheet, so that changes in the datasheet are reflected in the linked results (analysis, plots). Several file formats are available for importing or exporting data.

CART

CART (classification and Regression Trees) lets you analyse highly complex data, and outputs data analyses as easy to understand graphical 'tree' displays. It is to chaid as regression is to chi-squared - i.e. a marked theoretical improvement. Trees automatically grow and are pruned during analysis of categorical or regression data. Version: 1

Apple Macintosh, PC Compatibles (MS-DOS and Windows) Retail Price: 795.00, Education Single Copy Price: £725.00 Ms Ana Timberlake, Timberlake Consultants, 47 Hartfield Crescent, West Wickham, Kent, BR4 9DW Tel: +44 (0) 181 4620495/0093 Fax: +44 (0) 181 4620493 E-mail: 100412.2603@compuserve.com

CCA v. 2.0

Convergent Cluster Analysis. Cluster analysis is a way of categorizing a collection of "objects," such as survey respondents, into groups or "clusters." Cluster analysis lets you see whether survey respondents "cluster" naturally into identifiable groups. To avoid the problem of seeing clusters even in random patterns, CCA uses a "k means" method of determining clusters that involves iterating from random but strategically chosen starting points. The most reproducible solution is chosen automatically.

CORAN, version 2.0

A small menu-structured program for Correspondence Analysis. Coran uses the scale values to produce graphical displays of the association in the table. The Thermoplot compares scale values of rows and columns of a single factor, thus offering insight in the association explained by this factor. The Biplot is a two-dimensional plot, showing the association of two factors simultaneously. As a special feature the program can produce jackknife estimates of scale values and of their associated standard errors.

CSA 2.3

Conversational Survey Analysis is an integrated set of programs for the documentation, description, and analysis of datasets that have been collected with structured questionnaires. CSA programs exist for most commonly used survey analysis procedures, including univariate, bivariate, and multivariate tabulations (and means), multiple regression, & algebraic transformations of variables. All offer a conversational approach to specifying the analytic procedures desired; they also use a transposed data structure, so that analytic results are typically produced with only a few seconds delay.

CTB 1.0

A program for research situations where indices have to be computed for data in a contingency table. As input CTB asks for a contingency table (maximum size 10 x 10) and computes measures for association, similarity indices, agreement indices and mobility indices. The standard output consists of the value computed for the index requested and, where necessary, the probability of the result.

DataDesk Pro, version 5.01

A fast and fully interactive data analysis program that utilizes the leading edge principles of Exploratory Data Analysis to provide a full complement of statistical tests and extensive graphical options. Its dynamic graphics (including plot rotation and brushing) are fully integrated with a full range of statistical analysis. It stores the results of previous analyses as part of the data file, so it is easy to investigate interesting aspects of data or to return to a plot or table and try a new analysis path. Statistics include multiple regression, principal components and cluster analysis, a full general linear model and many plots (scatter-, rotating 3D-, box-, dot-, surface plots, bar charts). Accepts data entered directly or ASCII files that are column delimited. Missing values are accepted.

EQS 4.0

Tests the full range of structural equation models, including multiple regression, multivariate regression, confirmatory factor analysis, structured means analysis, and multiple populations comparisons. Includes the Satorra-Bentler scales chi-square statistic. The EQS/Windows version has an integrated visual interface with extensive data exploration and manipulation options.

Macintosh, IBM RS6000, PC Compatibles (Win.), Sun (Solaris), 4MB RAM Cost: £395-£695, \$665 (DOS), \$755 (DOS/Ext,MAC), \$840 (Windows), Education Single Copy Price: £550.00 iec ProGAMMA, Grote Rozenstraat 15, PO Box 841, 9700 AV Groningen, The Netherlands Tel. +31 50 363 6900 Fax. +31 50 363 6687 E-mail gamma.post@gamma.rug.nl http://www.gamma.rug.nl

Ex-Sample

Guides the researcher through a systematic process for determining sample size. By using artificial intelligence, this expert system computes the minimum size required from a wide range of analyses, adjusting for multiple comparisons, response rates and other factors, then compares its findings to the maximum possible size given resources.

PC compatible (MS-DOS)

Cost: \$250

The Idea Works Inc, 607 Jackson, Columbia, MO 65203, USA

Exploratory Data Analysis

Graphics oriented and makes use of the new EDA techniques. Examine data with letter-value displays, stem and leaf displays and box plots. When fitting data to a line, users will be able to run a resistant line through the data points, as well as carry out regression calculations. Analysis of variance is complemented by median polish and the preparation of coded tables. The distribution of data points can be checked by drawing rootograms. Also has cross tabulations, distributions, regression, sensitivity analysis.

FASTAT 2.0

A statistics package with a menu-driven interface and integrated design. Includes a spreadsheet data editor, manual, and on-line help. Features include box plots, stem-and-leaf diagrams, scatterplot matrices, and 3-D rotating plots. FASTAT 2.0 also provides a variety of graphs from histograms and bar-charts to 3-D data and function plots.

Macintosh. PC compatible (MS-DOS).

Education price £225.00

Fig.P, v 2.7 / 6.0c

A graphics package for scientists. Enter data from the keyboard, spreadsheet, or disk files, then quickly create exactly the figure you want and output, including colors, in the form of plotter, printer, or laserprinter output, or slides. At all points in the program, sensible defaults enable you to create figures from your data effortlessly. Fig.P also offers powerful analysis tools including statistics, curve-fitting and data transformation. 2 versions: DOS (v. 6.0c) and Windows (v. 2.7) compatible with Win. 95.

PC compatible (DOS, 3.0+, 640 KB. Windows 3.1, 4 MB £280

GIANTS

GIANTS, by SciTech, is software for the modeling and statistical analysis of time-series data. GIANTS includes features such as trend analysis, cross analysis, forecasting, and mathematical functions. The application also comes with a complete text that shows how to apply time-series analyses to business, economics, sociology, etc.

PC compatible (80386/80486, MS-DOS) \$495 academic price. Site license and student edition pricing available. Contact: SciTech International Inc., Chicago, IL USA. Tel: +1 312 472-0444.

GLIM 4

Fits generalized linear models; i.e. models for a single response variable, a distribution in the exponential family and a linear model in the explanatory variables related to the response mean via some link function. These encompass many of the standard

techniques of data analysis including regression, analysis of variance, log-linear models, logistic regression and survival analysis. The range of standard glms has been expanded in version 4 to include the inverse gaussian distribution, sometimes used in reliability modelling, and new link functions include generalized power and inverse quadratic links.

PC 80386/80486, MS-DOS. Versions are also available for a wide range of other machines and operating systems. Price on application. Discounts for multiple purchases NAG Ltd, Wilkinson House, Jordan Hill Road, Oxford . OX2 8DR. UK

Review by John Hinde, in the Nov. 1994 issue of the newsletter *Maths&Stats*.

Interactive Population Statistical System (IPSS)

This trend analysis and projection package. Uses data like population composition, fertility rates, migration rates and survival rates to make predictions about future changes in the population. A special rates window allows the user to input rate specific figures for an incidence of a given disease or condition and produces a projection of the future incidence of that condition. Analysis can be performed in two distinct modes, Projection analysis and Life table analysis. The package will make a prediction on a subject area such as population growth up to 200 years into the future and 50 years backwards. ISBN 0-944244-01-7.

JMP v3.1.5

JMP presents statistics in a graphical environment. Data tables are presented clearly in spreadsheet form and are dynamically linked to related graphs and tables. Offers six statistical analysis platforms including a 3-D spin plot, as well as capabilities for performing univariate statistics, analysis of variance and multiple regression, nonlinear fitting, multivariate analysis, and nonparametric tests. Features integrated capabilities for quality improvement and design of experiments, with 5 types of classical designs for estimating the effect of one or more factors on a dependent variable. The software also provides a variety of graphical tools designed for quality control including Shewhart control charts and Pareto charts. Student v. JMP IN, offers the core functionality of JMP.

Mac and Power Mac (native) (4 MB), Windows (386 +, 8 MB of RAM, up to 7 MB HD, Win NT, Win 95 or Windows 3.1 with Win32s, a math co-processor not required.) Education Price: £300; Educational annual License: £200 for first copy for the first year, and £100 each year thereafter. Copies after the first one cost £125 /£60. Multi copy licences are available, e.g. 10 copies £1055 for the first year etc. SAS Institute, Wittington House, Medmenham, Marlow, Bucks SL7 2EB; Tel: +44 (0) 1628-486933 http://www.sas.com/

KWIKSTAT 4 Professional v. 4.1

A general purpose statistical analysis program. Now has about 12,000 users world wide. A basic shareware version is available. Pro. version includes all shareware basic features plus: ANOVA module to perform a two factor analysis of variance, including unbalanced data; - Time Series module includes data plotting, autocorrelations, partial autocorrelations; - The Quality Control module to create X-Bar charts, R-Charts, S-Charts an P-Charts; - The Pareto Chart module to display Pareto charts, - The Multiple Comparisons module allows you to perform custom multiple comparison procedures using Newman-Keuls, Tukey HSD, Scheffe, or Dunnett's test on up to 20 groups. Windows version called WINKS, qv.

LISCOMP 1.1

Analysis of LInear Structural equations with a COMPrehensive measurement model. The program is inspired by the LISREL modelling framework. Researchers can combine many types of variables, estimators and analyses in a single program. The program is especially well-suited for categorical data and continuous multivariate non-normal data. LISCOMP includes a user's guide with many worked examples.

PC compatible (MS-DOS)
Cost: \$360

E-mail gamma.post@gamma.rug.nl

http://www.gamma.rug.nl

LISREL 8/PRELIS 2

A program for the estimation of LInear Structural RELationships and other types of multivariate analyses, such as factor analysis, multiple regression, path analysis, analysis of mean structures, and multisample analysis. LISREL 8 contains the new command language SIMPLIS. Includes PRELIS 2, for multivariate data screening and data summarization. PRELIS 2 greatly improves and accelerates analysis of binary, categorical, ordinal, censored, continuous, and/or incomplete data.

PC compatible (MS-DOS, OS/2, Win and DOS extender systems), Macintosh Cost: \$510 (DOS), \$590 (DOS Ext/Windows), \$590.00 (Lisrel 7.20/Prelis 1.20 Mac) iec ProGAMMA, Grote Rozenstraat 15, PO Box 841, 9700 AV Groningen, The Netherlands Tel. +31 50 363 6900 Fax. +31 50 363 6687 E-mail gamma.post@gamma.rug.nl http://www.gamma.rug.nl LEA, 27 Palmeira Mansions, Church Road, Hove, East Sussex BN3 2FA Tel. +44 (0) 1273 207411 Fax. +44 (0) 1273 205612 E-mail: orders@leahq.mhs.compuserv.com http://www.erlbaum.com/

LOGIMO 1.0

A program for the estimation and testing of ordinary loglinear models and loglinear IRT models (multidimensional). Partial credit models and Multidimensional Polytomous Latent Trait Models can also be specified. N.B. Maximum likelihood estimates of the loglinear model parameters are computed from the sufficient statistic of the parameters rather than the contingency table of the full cross-classification of all variables.

rther than the contingency table of the full cross-classification of all variables.

PC compatible (MS-DOS)

Cost: \$250 (educational price)

iec ProGAMMA, Grote Rozenstraat 15, PO Box 841, 9700 AV Groningen, The Netherlands

E-mail gamma.post@gamma.rug.nl

http://www.gamma.rug.nl

LogXact

Supports exact inference for logistic regression. For small or imbalanced data sets the maximum likelihood method is often inaccurate. An alternative method is based on the exact permutation distributions of sufficient statistics for the regression parameters. This yields exact p-values and confidence intervals no matter how small or imbalanced the data, and converges in large samples to the maximum likelihood approach. LogXact also handles matched case-control data under general M:N matching.

PC Compatible (MS-DOS)
Cost: \$195 - \$695

MacDendro

A Macintosh program for cluster analysis, compatible with MacMul and GraphMu: it uses the same type of binary files. It may be used to compute hierarchies and partitions according to several classical algorithms. GraphMu may be used to draw the graphical display (dendrograms) of hierarchies computed with MacDendro.

Macintosh

MacSpin version 1.1

A tool for graphical data analysis. Allows the user to visualize data and easily discover patterns, trends, associations and outliers. Data analysis becomes an engaging, interesting process - visual and intuitive. MacSpin provides new ways to look at data: instant Pop-Up of background info, 3-D display via rotation, a 4th dimension via animation, highlighting for categorical data.

Macintosh, (512 KB RAM, optional support for co-processor)

MiniTab

A package for data analysis, statistical problem solving, and quality control applications. Includes: basic statistics, presentation-quality graphics, regression analysis, Anova, Ancova Manova, non-parametric analysis, simulation and distributions, statistical process control charts, a design of experiments interface, hierarchical clustering, dendrograms, and a flexible macro programming language. New macros in time series and forecasting. Graphs may be enhanced using the tool palettes. A limited facility for plot brushing has been added. New plot types:- 3D data, 3D wire frame and 3D surface plots, contour plots, matrix plots, pie charts and marginal plots. Interaction plots, main effect plots and interval plots help with the interpretation of ANOVA. French and Spanish version also available.

MULTILOG 6.0

Employs item response theory to perform analysis and test scoring for multiple-category items. Models may be fit to a latent ability continuum by marginal maximum likelihood, or to a manifest ability criterion by maximum likelihood. The program has the capacity to impose equality constraints on selected subsets of item parameters. Can handle models intermediate between conventional 1-, 2-, and 3-parameter logistic models.

PC compatible \$215 (educational price) iec ProGAMMA, Grote Rozenstraat 15, PO Box 841, 9700 AV Groningen, The Netherlands Tel. +31 50 363 6900 Fax. +31 50 363 6687 E-mail gamma.post@gamma.rug.nl http://www.gamma.rug.nl

MULTISTAT Statistics with graphics for Macintosh

A statistical software package with a range of graphics capabilities. Columns of data can be transformed e.g. with log, sine, cosine or tangent, and a column can be sorted or ranked. Descriptive statistics include range, median, standard deviation, skewness. Parametric and non- parametric statistics include t-test, correlation, simple and multiple linear regression, one way- and two way analysis of variance, contingency table tests, Wilcoxon's signed ranks test, Mann-Whitney U test, Spearman's rank correlation etc. Graphics include Histograms, Bar charts, Pies, Line graphs, Scatter graphs.

Macintosh £99 Biosoft, 49 Bateman Street, Cambridge. CB2 1LR UK Tel: +44 (0)1223 368622 Fax: +44 (0)1223 312873 E-mail: ab47@cityscape.co.uk http://www.cityscape.co.uk/biosoft

MVSP

Multi-Variate Statistical Package v. 2.2 supports various procedures including, principal components analysis, principal coordinates analysis, correspondence analysis, distance or similarity measures, hierarchical cluster analysis and diversity indices.

MYSTAT v2.1

A subset of SYSTAT for introductory statistics courses. Includes a text, *MYSTAT: Statistical Applications*, which covers the statistical concepts in MYSTAT, and a disk of sample data sets. MYSTAT is menu driven and has a full screen data editor. It features multiple regression, t-Tests, sorting, ranking and weighting, Anova/Ancova, graphics, multi-way tabulations and more. Handles up to 50 variables and 32,000 cases.

Data Analysis - Statistical

Macintosh, PC Compatibles, 320KB RAM Retail: £35.00, CHEST Education: £25.00 Ms Ana Timberlake, Timberlake Consultants, 47 Hartfield Crescent, West Wickham, Kent, BR4 9DW Tel: +44 (0) 181 4620495/0093 Fax: +44 (0) 181 4620493 E-mail: 100412.2603@compuserve.com http://www.spss.com/

NSDstat+93

A comprehensive, menu-driven program for data analysis and presentation. Had a broad collection of statistics, e.g. cross-tabulations, regressions, and breakdown analysis. Integrated graphical functions include bar and pie charts, scatterplots, and Lorenz curves. Thematic mapping displays regional distributions in shadings, colors, or graduated symbols. A set of base maps is available. Several leading European data archives offer a number of data sets in the NSDstat format.

PC compatible \$280 (educational) \$560 (non-educational) iec ProGAMMA, Grote Rozenstraat 15, PO Box 841, 9700 AV Groningen, The Netherlands Tel. +31 50 363 6900 Fax. +31 50 363 6687 E-mail gamma.post@gamma.rug.nl http://www.gamma.rug.nl

QMethod

A statistical program tailored to the requirements of Q studies. Specifically, it allows the easy entry of data (Q-Sorts) the way they are collected, i.e. as 'piles' of statement numbers. It computes intercorrelations among Q-Sorts, which are then factor-analysed with the Centroid method. Resulting factors can be rotated either analytically (Varimax) or judgmentally with the help of 2-D plots. Finally the analysis step produces an extensive report on factor loadings, statement factor scores, discriminating statements for each of the factors as well as consensus statements across factors, etc.

PQMethod is the free PC version of John Atkinson's QMethod program Download from: http://www.rz.unibw-muenchen.de/~p41bsmk/qmethod/
Peter Schmolck, Dept. Education, Univ. of the Federal Armed Forces, Munich. Germany E-mail: p41bsmk@unibw-muenchen.de

Stainton Rogers, R. (1995). Q methodology. In J.A. Smith, R. Harre & L. Van Langenhove (Eds.), Rethinking methods in psychology (pp. 178-192). London: Sage.

PC compatible with DOS, Win3.x, or Win95, and at least 4MB RAM.

QStats

A data exploration and analysis program. Written for use with colour, it will run under most monochrome graphics cards. The program is not large, and takes about 470K when decompressed. QStats can handle up to 800 variables and up to about 5000 cases.

PC compatible (80386 or better, MS-DOS) Free from: ftp://ftp.soc.qc.edu/pub/QSoft/qstat231.zip Queens College, Belfast

http://www.soc.qc.edu/QC_Software/

Quick STATISTICA/DOS

Comes in 3 versions: Quick STATISTICA/DOS, Quick STATISTICA/Mac and Quick STATISTICA/w, which are subsets of STATISTICA/DOS, STATISTICA/Mac and STATISTICA/w respectively. Each has a comprehensive selection of basic statistics with the full analytical and presentation quality graphics capability of the full version.

> PC Compatibles, (MS-DOS, 2MB RAM) (Win 3.1, 2MB RAM), Macintosh Retail: £395.00, CHEST Education: £316.00. Site Licence: £1950.00 StatSoft, Icknield House, Eastcheap, Letchworth, Herts, SG6 3DA Contact: Mr. John Mackenzie Tel: +44 (0)1462 482822 Fax: +44 (0)1462 482855

http://www.statsoftinc.com

RAMpath

RAMpath supports the organization, display, and analysis of linear structural equation models. The program uses automatic routines to calculate and display the tracing rules of path analysis. RAMpath supports LISREL, LISREL 7.20, and SAS/CALIS.

PC compatible (MS-DOS) Cost: \$49.95 Lawrence Erlbaum Associates, 27 Palmeira Mansions, Church Road, Hove. BN3 2FA Tel. +44 (0) 1273 207411 Fax. +44 (0) 1273 205612 E-mail: orders@leahq.mhs.compuserv.com http://www.erlbaum.com/

Regression

Regression curve fitting for bivariate non-linear regression. Accepts 10 parameters, 10 constants and 200 data points with two x variables and one y variable. Offers a choice of Marquardt and simplex algorithms.

> Mac and PC compatible (Windows 3.1) £150.00 (20% academic discount) Blackwell Scientific Software, BSP Ltd, Osney Mead, OXFORD OX2 OEL Tel: +44 (0) 865 791738 http://www.blackwell.com/

SAS System PC, version 6.02

An integrated data analysis system and fourth generation language that can be used for a wide variety of applications. The SAS System for personal computers includes base SAS software, for data management, descriptive statistical analysis, and report writing; and SAS/STAT software, for full-function statistical analysis; and SAS/IML, for interactive matrix programming. Additional products are under development. To use any product in the SAS System, sites first need base SAS software. The institute offers instructor-based and video-based training for the SAS System for PC. SAS has developed tools to link to the WWW.

PC compatibles, 512KB RAM, Win 3.x with 1MB RAM, UNIX Site license. £4,500. CHEST pricing is dependent on Class of Modules selected.

SASPAC91 (Census Data)

SASPAC91 is specially commissioned and written for the interrogation of the 1991 Census Small Area and Local Base Statistics. User-friendly tailor-made computer package which will enable your organization to obtain what it requires from the 1991 Census of Population. Produces reports on these statistics including individual tables, individual pages, user-defined pages, selected variables, and area profiles.

PC compatible (MS-DOS, MS-Windows, 2MB RAM), VME, VMS Retail price. £4500.00, Site Licence: £400.00 Mr. Hywel Davies London Research Centre. 81 Black Prince Road, London SE1 7SZ Tel: +44 (0) 171 627 9696

SIGMASTAT for Windows v2.0

A statistical package which efficiently computes t-tests, analysis of variance, correlation, rates and proportions, nonparametric methods, linear and nonlinear regressions, power, and sample size. SigmaStat's "Advise" command helps users select the most appropriate statistical procedure for their data and then automatically performs the test. Includes detailed log reports, mathematical transforms, graphical features. Unique handling of missing and unbalanced data. Has a range of mathematical transform functions including trigonometric, numeric, range, and accumulation functions.

PC Compatibles, Windows (8MB RAM), Windows 95, Windows NT CHEST Education: £350.24. For students £195. Site licences also available. Also available for \$395 from: Jandel Scientific, San Rafael, CA; +1 415 453-6700

Solo

A basic package intended for non-statisticians including a wide variety of basic statistics that are quick, complete and accurate. It provides cross-tabulation, t-tests, regression and non-parametrics, and basic models for Anova, forecasting, discriminant and cluster analysis. An advanced set of statistical routines is also available as an add on to SOLO. It includes basic procedure for non-linear and logistic regression, canonical correlation and multivariate Anova.

PC Compatibles (Windows) £495 Statistical Solutions Ltd, 8 South Bank, Crosse's Green, Cork, Ireland Tel. +353 21 319629 Fax. +353 21 319630 E-mail: sales@statsol.ie or support@statsol.ie

SPSS v6.1 & 7

A data analysis module with wide cross-platform support. You can translate data between SPSS/PC+, ASCII, dBASE, Excel, Lotus, SAS, and SYLK. The UNIX-versions give you integrated interfaces for Oracle, Sybase, Informix, and Ingres. A spreadsheet-like Data Editor helps you to enter and label data. Statistical procedures: Frequencies, Descriptives, Crosstabs, t-tests, Oneway ANOVA, ANOVA models, linear regression, nonparametric tests, multiple responses, continuous distributions, discrete distributions, non-central distributions. Graphical capabilities: Business charts (bar, line, area, pie and more), Statistical charts (boxplots, scatterplots, high-low-close, difference line and more), SQC charts, Diagnostic and exploratory plots.

SPSS 7.0 for Win 3.1 (8MB of RAM, 20MB HD for base system), Win 95 & Win NT (486 or better, 16MB of RAM 45MB HD). SPSS 6.1 Mac(68030 or 68040, 16MB of RAM 22MB HD for base system, PowerPC with 16MB of RAM 19MB HD for base system), MS-DOS v 5. From £695 for base system.

CHEST site licence: £9,850.00 covers all desktop platforms.

Stata v. 4

Statistical package. Contains logit, probit, survival analysis, maximum likelihood estimation, linear and non-linear regression, powerful programming language, and powerful graphics. Many cross sectional time series analysis features. Base package supports 255 variables and 32,000 observations. Enhanced v. supports 2048 variables.

Macintosh, PC Compatibles (8MB RAM) £675.00, CHEST Education: £230.00. Student & teaching lab from £45 per copy. Site licences available.

Statgraphics Plus

This package handles statistical analyses, forecasting and SPC/SQC analyses and provides a wide range of graphics. Statistical procedures include: regression analysis with outlier rejection, ridge regression, non-linear regression, correlational and covariance analysis, principal components, factor, discriminant, cluster analysis and survival analysis. Statgraphics also offers an experimental design module and an ANOVA which includes one-way, multifactor (up to 17 factors) and nested designs.

PC Compatibles, 4 MB RAM
Retail: £1090.00, CHEST Education: £650.00, Site Licence: £6000.00

Statgraphics Plus for Windows v. 2

Statistical analyses, forecasting and SPC/SQC analyses and a wide range of graphics. Over 150 statistical procedures including: regression analysis with outlier rejection, ridge & non-linear regression, correlational & covariance analysis, principal components, factor, discriminant, cluster analysis and survival analysis. Statgraphics also offers an experimental design module and an ANOVA which includes one-way, multifactor (up to 17 factors) and nested designs. Also StatAdvisor, gives instant interpretations of results; interactive graphics and StatGallery, combines multiple text and graphics panes in one window. Add-on modules: Quality Control, Design of Experiments, Time-Series Analysis, Advanced Multivariate Methods, and Advanced Regression Models.

Windows 3.1, 95, NT, 8 MB RAM £1250.00, CHEST Education: £725.00, Site Licence: £5000.00 Peter Day/Beverley Satterley, The Bloomsbury Software Company Ltd, 3-6 Alfred Place, Bloomsbury, London, WC1E 7EB Tel: +44 (0) 171 436 9481 Fax: +44 (0) 171 436 0524 or, Manugistics, Inc., 2115 East Jefferson Street, Rockville, MD, 20852, U.S.A E-mail: sgsales@manu.com. http://www.manu.com/statgraphics/

Statgraphics v. 7

Over 200 statistical and mathematical procedures for analysis. Combines a menu-driven interface with powerful analytical capability, ideal for quality control, R&D, marketing, finance and the social sciences. Interacting and automated processing modes.

PC Compatibles, 640 KB RAM £ 650.00, CHEST Education: £425.00, Site Licence: £3800.00 Peter Day/Beverley Satterley, The Bloomsbury Software Company Ltd, 3-6 Alfred Place, Bloomsbury, London, WC1E 7EB Tel: +44 (0) 171 436 9481 Fax: +44 (0) 171 436 0524 http://www.manu.com/statgraphics/

Statistica/DOS

Wide selection of data analysis and graphics including basic statistics, tables, MANOVA, non-parametrics, regression, cluster and factor analysis, non linear estimation, stepwise discriminant function, time series, canonical correlations, reliability/item log -linear survival and failure time analysis and a programming language, all fully integrated with presentation quality graphics.

PC compatible with MS-DOS Retail: £585.00, CHEST Education: £468.00, Site Licence: £1,950.00 StatSoft, Icknield House, Eastcheap, Letchworth, Herts, SG6 3DA Tel: +44 (0) 1462 482822 Fax: +44 (0) 1462 482855 http://www.statsoftinc.com

Statistica/Mac v. 4.1

Wide selection of data analysis and graphics including basic statistics, tables, MANOVA, non-parametrics, regression, cluster and factor analysis, non linear estimation, stepwise discriminant function, time series, canonical correlations, reliability/item log -linear survival and failure time analysis and a programming

language, all fully integrated with presentation quality graphics (including MacDrawstyle tools). Unlimited size of files; System 7 and MultiFinder compatible.

Macintosh, 2 MB RAM

Retail: £525.00, CHEST Education: £420.00, Site Licence: £1950.00. Site licence price is per year. Multi user, network, and student versions also available StatSoft, Icknield House, Eastcheap, Letchworth, Herts, SG6 3DA Tel: +44 (0) 1462 482822 Fax: +44 (0) 1462 482855

Statistica/Win v. 5.1

An integrated statistical data analysis, graphics, and data base management system featuring a wide selection of basic and advanced analytic procedures. Includes general-purpose statistical and graphics procedures and comprehensive implementations of specialized modules (e.g., for social scientists). All modules are available to the user as part of an integrated package, Add-on STATISTICA/QC includes highly customizable quality control charts (compatible with real-time data acquisition systems), process capability analysis, R&R, sampling plans, and a wide selection of experimental design (DOE) methods. MDI standard user interface, DDE, OLE, API, 3D-TT fonts, multiple toolbars, right mouse button support. Unlimited size of files; thousands of graphs integrated with all procedures; extensive drawing facilities.

PC compatible with Windows, 4MB RAM
Retail: £745.00, CHEST Education: £596.00, Site Licence: £1950.00
Site licence price is per year. Multi user, network, and student versions also available

StatMate

Complements Prism by providing a collection of 8 statistical calculators to help you design statistically sound experiments and to help you interpret results. A short manual explains what each of the calculators is used for, and how to interpret the results. StatMate helps you plan an experiment, helps you pick the right statistical test to use, calculate sample size, randomize, interpret statistical results, calculate P values, confidence limits, Binomial or Poisson distributions, Bayesian calculations.

Windows 3.1 or Windows 95. Less than 1 MB HD. GraphPad StatMate alone for \$95, or buy it as part of the Prism bundle. GraphPad Software Inc. 10855 Sorrento Valley Rd. #203, San Diego, CA 92121, USA Tel: +1 619-457-3909 Fax: +1 619-457-8141 E-mail:sales@graphpad.com, support@graphpad.com, Orders@graphpad.com http://www.graphpad.com/www/welcome.html

StatView 4.5

An integrated program for data management, statistical analysis, graphing and presentation, it allows users to work within one software package to complete tasks that previously required four or more programs. Mac version compatible with WorldScript, that allows applications to operate multiple languages, including those that require right-to-left entry and display. StatView also provides additional functionality with add-on tools such as QC Tools, which add a complete set of quality control statistics and graphs to StatView, including Xbar, R, S, I, MR, CUSUM, and Pareto analysis. \$595. QC Tools are available separately for \$245. A student version of StatView is also available for \$99.

Apple Macintosh and Power Mac. (2 MB RAM), PC compatibles (Win 3.1). £450, Education Single Copy Price: £399.00, 5 Pack Price: £1250.00 Total, Vicky Jones, Cherwell Scientific Publishing, The Magdalen Centre, Oxford Science Park, Oxford OX4 4GA

StatView II & SE+ Graphics

Full-featured statistical analysis tool with comprehensive descriptive, comparative and non-parametric statistics with interactive graphics, transformations, range setting capabilities, recode capabilities and general data handling capabilities. Includes t-test, Pearson correlations, regression and Anova.

Macintosh (no PowerPC version available) StatView II requires maths co-processor. £250 (15% educational discount) (5 and 10 pack deals available) Vicky Jones, Cherwell Scientific Publishing, The Magdalen Centre, Oxford Science Park, Oxford OX4 4GA Tel: +44 (0) 1865 784800 Fax: +44 (0) 1865 784801 E-mail: csp@cherwell.com http://www.cherwell.com/cherwell

SuperAnova v. 1.11

A program for building ANOVA models using general linear modelling techniques. Solves any design including split-plot, nested block and incomplete block, confounded factorial, Latin and Greco-Latin squares. Combines powerful GLM techniques (ANOVA, ANCOVA, MANOVA, MANCOVA etc.) and full presentation graphing features. Includes pre-mode 'canned' models for many common types of model design. These can be used with any database. Free technical support by telephone and fax.

Systat Student Edition v. 5

A student educational version of the Systat statistical package. Powerful graphics and statistics bundled with a statistics textbook/ software manual. 100 variables limit.

Apple Macintosh, PC Compatibles (MS-DOS and Win. 2MB RAM) CHEST, Education Single Copy Price: £45.00 Ms Ana Timberlake, Timberlake Consultants, 47 Hartfield Crescent, West Wickham, Kent, BR4 9DW Tel: +44 (0) 181 4620495/0093 Fax: +44 (0) 181 4620493 E-mail: 100412.2603@compuserve.com

Systat v. 5.2

Includes Systat, a general purpose statistics program with an wide range of features, and FASTAT. SYSTAT, for DOS, Windows, and Macintosh, is a statistics, graphics, and data management package that offers tools for advanced statistical and exploratory analysis. Features range from basic descriptive statistics to parametric and non-parametric tests, correlations, OLS regressions, cross-tabulations with a log-linear modelling option, non-linear modregression, time series analysis, factor analysis/principal components, cluster and MDS., GLIM, survival analysis, reliability and latent trait analysis and 2-D and 3-D presentation-quality graphics.

Apple Macintosh (2MB RAM, 6MB HD), DEC VAX, PC Compatibles, (MS-DOS & Win. 4MB RAM) £795.00, CHEST Education: £725.00, Site Licence: £800.00 p.a.. plus £350 for each additional platform. UltraFit, v. 3.0

Fits sets of experimental data by non-linear regression. Data maybe keyed in or copied and pasted from the clipboard or other Mac programs including Excel. There is a powerful data editor and the numerous data transforms include sort, arithmetic, raise to power, log, erf, user-defined, etc. Equations can be entered in ordinary algebraic notation, and 26 pre-defined equations are supplied with UltraFit. There is a flexible data weighting facility. Graphs can be copied and pasted into other documents, printed out direct or saved as PICT. Residuals can be plotted or tabulated, and standard errors or confidence limits of the parameters are automatically calculated. The Log Book automatically records each fit and its statistics, either in summary or with details of every iteration. New features of version 3.0 include: built -in powerful spreadsheet with up to 1

billion cells and more data transforms, multivariable equation fits, new comprehensive manual, multiple undo feature.

Macintosh and Power Mac 1MB RAM. (available for 68k Mac with co-processor) US \$: 299

Demo version: http://www.CityScape.co.uk/biosoft/ufitdemo.htm

Unistat for Windows v. 4.0

Provides researchers with a completely new intuitive way of analysing data and preparing reports. Close integration with MS Office via OLE2 automation enables the use of MS Excel for Windows as the spreadsheet for data preparation and UNISTAT 4 for data analysis. Very wide range of charts and graphs. Descriptive statistics, histograms, frequency tables, distribution function, parametric and nonparametric tests, goodness of fit tests, correlations, contingency tables, cross-tabulation and break-down, OLS, stepwise, non-linear, logit-probit regressions, ANOVA and ANCOVA, cluster, discriminant, principal components, factor, reliability, survival analyses, multi-dimensional scaling, multivariate plots: x-y pairs plots, rectangle plots and icon plots, time series analysis: arima models, forecasting and smoothing, quality control, survival analysis and fourier analysis.

PC Compatibles with Windows 3.1 or 95 (4MB RAM) Retail: £695.00, Education Single Copy Price: £495.00, Site Licence: £4000.00, Education 2 Copies Price: £450.00 each, 5 Copies Price: £300.00 each

Text retrievers/content analysis

Metamorph

Metamorph is a qualitative text retrieval tool for large quantities of data. It is designed to work with large quantities of unstructured text, which it can quickly scan to find information. It is built on a systematic structure of pattern matching and set logic. Metamorph will scan large quantities of text to find not only a word or name, but a concept, a combination of words, phrases, wildcard strings, quantities, approximations (including typos, transpositions, and mis-spellings) and variable length patterns. Employs a modifiable 250,000 word thesaurus to identify 'Hits'. The information is presented on screen in its original context with the "Hits" highlighted. Retrieved information can be marked and saved in an appendable file. Data query can be done in natural language format.

DOS, UNIX and Windows, 5.5 MB HD; Windows 3 or above; and 4MB RAM. Single User Copy: £895.00. 10% academic discount available from Group Intellex. Network version available, discounted depending on the number of users on Network, Group Intellex, Prospect Place, Mill Lane, Alton, Hampshire, GU34 2SX.

SONAR Professional

High speed searching and annotating program. Sonar Professional can process many types of text and word processing files so information already contained in computer files can be easily integrated. Sonar Professional can also view the saved images from Sonar Image. In a network environment several people at once can view and search the same files.

VARBRUL

VARBRUL is a hyponym for VARBRUL2 (PC and VAX) and GoldVarb (Macintosh and VAX). VARBRUL was designed to facilitate analysis of linguistic variables and social variables. It works best on phonological and morphological variables where there is a clear equivalence of function, but can be used on syntactic variables (e.g. relative pronouns or negatives) where equivalence also obtains. Where variation could be accounted for semantically, pragmatically, or stylistically, it is less useful because there is no exact equivalence. The main purpose of the package is to identify statistical patterns of variation which may be significant, environmentally conditioned, or determined by one of the external variables.

PC compatibles, Macintosh, VAX

Price: Free.

Developers: The PC/VAX version was developed by Susan Pintzuk, formerly of the University of Pennsylvania, now of New York University; the Macintosh version was developed by David Rand and David Sankoff of the University of Montreal.

Availability: From the Developers.

Wordcruncher v. 4.5

An interactive textual analysis program with 2 parts: the WCIndex program for indexing texts, and the WCView program for analysing previously indexed texts. Once indexed, searching is very fast, allowing interactive interrogation of the text. WordCruncher allows three hierarchical levels of coding (e.g. Act/Scene/Line), a system which can be constraining in some applications. At the indexing stage, it is possible to customize the character settings to some degree, for example, using options for Spanish, German, or French, or to create your own.

PC compatibles; minimum 512KB RAM; DOS 3.2 or 3.3; 1.2 MB HD. Shareware version - \$5.00 disk charge plus \$4.00 postage and handling fee from Public Software League, PO Box 35705, Houston, TX 77235, USA.

Complete version, \$395.00 (\$299.00 academic price) and \$695.00 for a network licence (\$500.00 academic price). WCView and WCIndex can be bought separately for \$225.00 each (\$179.00 academic price).

Johnston & Company, Electronic Publishers, P.O. Box 446, American Fork, UT 84003, USA.

Words Count

Text analysis software designed to generate information about literary transitions, subordination, vague words, and other writing attributes. However, it may be useful for other forms of text analysis. It supports more than 50 analytic functions, customizable word lists, sample analyses, frequency distribution graphs, built-in spreadsheet (import/export with Excel). It comes with vocabulary richness indexes, content and effectiveness scales (many unique to this program), and hundreds of individual items of information including the following: words related to a negative tone; words related to exaggeration and opinionation; and words related to vague and overly tentative writing.

Windows 3.1, 2 MB HD, and 2 MB RAM. \$25 (plus \$6 shipping) Network license, \$100 plus \$1/CPU Words Count Company, Order Department, 1417 West Carriage St., Santa Ana, CA 92704

ZyINDEX

ZyINDEX is a free-text file-indexing program that makes large amounts of structured and unstructured documents accessible by building an index of content words. ZyINDEX locates documents based on their content with powerful search tools. The search options are almost unlimited, you can search e.g. for words, sentences, text structures, fields, variations and synonyms. You can also combine search terms with Boolean, proximity, date, quorum and numeric operators as well as ZyLAB's fuzzy search technology.

Textbase managers

askSam 3.0 Pro

An information storage and retrieval system for use with both textual and numerical data. A large database can be loaded quickly as a series of ASCII files which can then be searched using any combination of words or symbols, with wild cards and Boolean operators. Alternatively, fields can be defined, and retrieved information can then be sorted by field, or alphabetically, numerically, or chronologically. An additional feature is the 'hypertext' facility, which allows you to change your designated search at any time by highlighting any word and making it the subject of a new search.

v.3.0 Pro Windows (Win 3.1, 4 MB RAM, 2 MB HD).
v.5.1 DOS (PC-compatible 256K RAM, 1 MB HD).
askSam Professional and askSam for DOS \$395.00. (askSam 3.0 \$149.95)
Available in the UK but cheaper to buy from the USA, as below.
askSam Systems Inc., P.O. Box 1428, 119 S. Washington St., Perry, FL 32347, USA

Reveiw: Burnley, D., 'Free Text Retrieval: GOfer Version 2.0 and askSam Version 4.2', *ReCALL* **2** (May, 1990), 19-21.

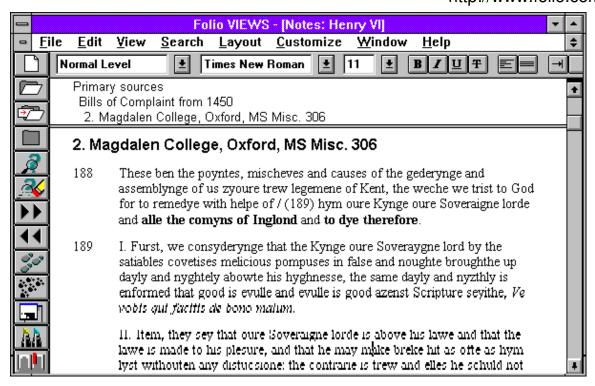

FolioVIEWS Infobase Manager v. 4

Folio VIEWS Infobase Manager gives users the ability to access, manage and adapt infobases in a lot of ways. Folio VIEWS calls a database an infobase to indicate that you can have many different kinds of information stored there. Every word in the infobase is indexed, which allows you to search the information. Folio VIEWS offers different hypertext and hypermedia links. Furthermore, the display and handling of graphic objects is supported. The Infobase Manager provides WYSIWYG display and output.

PC compatibles, DOS, 3.1 or higher (2MB RAM, 2MB HD); Win. 3.1 (2MB RAM, 2MB HD, 4MB RAM recommended with 7.5MB HD for full program); Macintosh (4MB RAM, 2MB, 6MB RAM recommended)

Folio Corporation, 5072 North 300 West, UT 84604, Provo, U.S.A.
Tel: +1 801 2296700 Fax: +1 801 2296790
E-mail: webmaster@folio.com/

ideaList

A flexible free-form database capable of holding all sorts of semi-structured information. All of the text entered into the database is immediately indexed so that searches, even on very large databases, only take a matter of seconds. It comes with a database reader with licence for unlimited academic use. The latest version had improved importing and exporting facilities, graphics handling and spelling checking.

Windows, Macintosh, MS-DOS Academic Price: Win. and Mac: £206.50, DOS £192.50. Discounts for multiple copies. Blackwell Scientific Software, BSP Ltd, Osney Mead, OXFORD OX2 OEL Tel: +44 (0) 865 791738 E-mail: marketing@blacksci.co.uk http://www.blackwell.com/

MAX

A specialized program for qualitative text analysis. It has been commonly used for descriptive/interpretive analysis. It has more similarity to a database than most qualitative analysis programs. Its distinction is that it works not only with narrative text, but with multiple-choice data as well, which can be used to enhance the analysis of the coded data. The program prepares files for socio-demographic and multiple choice data

Data Analysis - Textbase managers

that can be exported into most statistics programs. String searches in the data text include wild card, exact match, and word combinations.

Tabletop

Tabletop animates data to create visual environments. You can categorize and measure, organize and arrange, represent and interpret, and graph and analyze. Tabletop represents data as mobile icons that can arrange themselves into such forms as box plots, crosstabulations, histograms, scatter plots, and Venn diagrams, under the user's control. This capability, coupled with options for labeling and marking groups of icons or performing summary computations, allows you to view the same data in different ways.

PC compatible (Win 3.1, 386SX or higher, 4MB RAM, VGA);

TACT 2.1

An interactive text retrieval program. It works with a textual database, an indexed file which must first be created with its utility MAKBAS. After selecting a text, the user can

scroll around a list of words and select one or more of interest. The occurrences of these words can be displayed as full texts (a screen full of surrounding text), in KWIC format (with user-defined context), or in index format (one line of context), as well as a distribution showing the density of occurrences of the words in certain areas of the text.

PC compatible.

Textbase Alpha

A qualitative data analysis package that allows researchers to code from the beginning to the end of sentences rather than by line numbers. The package allows overlapping and nesting of codes. For sorting and collating coded segments, Textbase Alpha provides an entry screen into which to type code names and search criteria. Normally, the search involves all data files of a search project (up to 200 files can be handled in a single "project"). Searches can also be conducted selectively by specifying the values of sociodemographic variables or of other identifiers.

Code-and-retrieve packages

Code-A-Text v.6

Specifically designed to facilitate the in depth analysis of texts. Code-A-Text was written to help in the training of psychotherapists. It was originally designed to facilitate the analysis of therapeutic conversations where clinicians, teachers and research workers wanted to understand the ideas and structures underlying the "texts". Recently, Code-A-Text has been applied to other types of "texts", including process (field notes), responses to open ended questionnaires and reports. Code-A-Text supports the coding of documents, transcripts or sound files.

Data Collector 2.0.2

This tool enables educators, researchers and students to organize and analyse qualitative data in an easy-to-use format. The Data Collector stack aids researchers in analysing textual data obtained from interviews, observation, surveys, journals and other documents in order to look for patterns and identify themes. It features a coding menu, Boolean searching, sorting options, comparative viewing and the ability to import and export text.

ESA

Event Structure Analysis (ESA) is an on-line Java program that helps you analyze sequential events. Prerequisite analysis produces a diagram showing how some events are necessary for other events, and how abstract events are represented in concrete happenings. You can test whether the diagram works as a grammar explaining the sequence of events. Composition analysis involves coding agent, action, object, instrument, setting, alignment, product, and beneficiary of each event. This lets you determine how people, things, and actions were linked by the events. ESA updates Ethno, published for DOS computers in 1988, which dealt only with prerequisite analysis.

Any platform with browser supporting Java, eg. Win 95, Macintosh PPC, UNIX.

Free
Written by David Heise

htp://www.indiana.edu/~socpsy/ESA/Index.html

Ethno

A program for studying concepts and their logical connections, and for discovering systems of rules which govern action, ETHNO facilitates computer-assisted construction and testing of action grammars to interpret texts. Designed to help define the relations among abstract events, and their representation in concrete events by defining rules that govern action. The user enters events in the order they happened during an incident and the program asks which earlier events were necessary for the last one and then draws a diagram to show the structure of prerequisites. It then assesses whether the sequence of events fits the restrictions that you defined and suggests possible ways in which any inconsistencies might be solved.

HyperQual v. 2

A qualitative data analysis package. The program consists of special stacks designed to hold and organize your data. Coding consists of highlighting relevant text chunks and sending them to a pre-specified stack. Codes can be attached by browsing through the stacks and multiple codes can be attached to each chunk of information. Codes can be added, changed or deleted. HyperQual2 offers special stacks for narrative responses from questionnaires, etc., so that these responses can easily be sorted according to the various questions even before any coding is done. Any card created can be printed out. At extra cost an "Introductory Guide" is available. Available as a stand alone application or as a HyperCard stack.

Hypersoft v. 3.01

Hypersoft 3.01 is designed as a core application to which you can add other tools as required. It supports conceptualization and comparison through 'index & retrieve' procedures. Conceptualization is supported by integrating categories and memos with text entries and providing a dictionary for defining and logging concepts. When inspecting index files, you can switch instantly between viewing your category, memo, text and info entries. Comparison is supported through procedures for selecting cases for

Data Analysis - Code-and-retrieve packages

analysis, retrieving index entries and reviewing results. The most innovative features lie in the add-on tools which support for example linking, mapping and matrix analysis. Some 30 additional procedures can be acquired individually or in families as they become available.

Macintosh, 1MB RAM min. (2MB RAM with colour/large windows) £35 postgrads and upgrades, £55 personal use by employees in educational institutions, £75 commercial use (including purchase from departmental and research grants), Plus P&P. £4 UK £10 Overseas.

Kit

Kit (Qualitative Interview and Therapy Analysis) is a computer program to analyse qualitative data, where the qualitative data is represented as near as possible to the original source. Interviews, speeches or talks are saved either directly on the computer or transferred from recordings to the computer. You get the intentions in voices, the emotions in voices - and a real time frame. Avoids many errors or interpretations encountered in transcriptions and the burden of transcription. Searching through tapes just to find one spot is very slow, meaning you can easily lose the track of the enquiry - this is eliminated in Kit by the quick jumping and shifting.

PC compatible with Windows.

Price on application.

Kwalitan v. 4.0

Kwalitan is menu driven, supporting the analysis of qualitative data, such as the protocols of interviews and observations, or existing written material, such as articles from newspapers, annual reports of enterprises, ancient manuscripts. The program has been developed in accordance with the narrowly elaborated procedures of the so called grounded theory approach, in which the researcher tries to generate a theoretical framework by means of an interpretative analysis of the qualitative material. The program can also be used in situations in which the researcher already has a theoretical framework and an elaborate list of codes. An English translation of the most recent version (4.0) is now available.

PC compatible with DOS 2.0+, 400KB RAM \$220 single user (price includes shipping & handling, excludes taxes) iec ProGAMMA, Grote Rozenstraat 15, PO Box 841, 9700 AV Groningen, The Netherlands Tel. +31 50 363 6900 Fax. +31 50 363 6687 E-mail gamma.post@gamma.rug.nl http://www.gamma.rug.nl Demo available from CAQDAS: http://www.soc.surrey.ac.uk/caqdas/packages.htm http://www.kun.nl/methoden/kwalitan/

QED-Analysis

This program is developed for researchers working with qualitative data (interviews, observation-data, questionnaires, monographs, archive materials, etc.). Use QED-Analysis for efficient storage and retrieval, or for highly structured, cyclical coding and hypothesis testings. Provides an on-line notebook, in which you can make notes, jot down thoughts, provide documentation on codes and sets, or just brainstorm. You can create lasting links between these notes, organized on cards, and data cards or codes.

Data Analysis - Code-and-retrieve packages

You can define your own way of organizing the data by dividing the data into meaningful chunks, placed on data cards. QED allows you to define up to three variables in each data file to identify the data on the cards.

PC compatible with Win 3.1+, Macintosh Price Dutch fl 375 + VAT MiMiC/TriMM, P.O. Box 1208, 7500 BE Enschede, The Netherlands Fax: +31 53 4353027 E-mail: support@qed.mimic.nl http://www.trimm.nl/qed/Demo for download: http://www.trimm.nl/qed/download.stm

QUALPRO

This qualitative data analysis package has a two-step coding procedure. The basic coding and retrieving functions are provided by the main program. The auxiliary functions are grouped together as utilities. The program supports intercoder reliability measures. It works with pairs of identical copies of data files that were coded by different people or at different times. The researcher can create a table that shows for each line of text which code was attached by which coder, thus supporting the training of coders.

The Ethnograph

Version 4.0 of this qualitative data analysis package allows for one or two-step coding procedures. The program creates a master code list from which the researcher can choose when coding. Correcting and changing of any coding is well-supported. Searches can be made for codes that co-occur anywhere in the same file and code frequencies can be

computed. New Features include on screen coding, Memos, Master List (Create lists of all the code words and identifiers in data files. Select codes from lists for searches and for coding), Code Book, Editor, Search Filters (Use Face Sheets, Identifier Sheets, and Identifiers to filter a search), Search Output Types (Generate output as segments, summary reports or frequencies)

WINMAX, v. 1.0

Analyses qualitative data like interview transcripts, field notes, documents, and letters. Codewords can be attached to text segments. Hierarchical codeword systems with unlimited levels of hierarchy can be defined. WINMAX is a code-and-retrieve program that allows to retrieve text segments depending on the codewords and their co-occurrence. Additionally, a second order cooling process is supported, where quantitative variables may be defined. These data may be exported to SPSS and other statistical programs.

Theory-building software

AQUAD

AQUAD either directly on the screen, or in a two-step procedure. In addition to codes, qualitative or quantitative "variables" (e.g., gender, age, profession, specific preferences of the research subjects) may be entered which can be used in combination with the regular codes for selective searches. AQUAD offers 12 pre-formulated "linkages" into which the researcher may enter the codes or variables whose relationships s/he wants to explore. Search for words and phrases, compute their frequency and extract words together with their context. Attach comments to codes and memos to text segments.

ATLAS/ti

ATLAS/ti is an easy to use, yet powerful computer software for the support of qualitative data analysis, text interpretation, text management and "grounded" theory building. It offers a non-hierarchical, exploratory approach to the complex phenomena hidden in textual, graphical and audio data. It supports many of the activities involved in text analysis and interpretation, particularly selecting, coding, annotating, and comparing noteworthy segments. This leads to actual theory building, the creative conceptualization phase. ATLAS/ti provides a comprehensive overview of the work; as well as rapid search, retrieval, and browsing functions of all data segments and notes relevant to one idea. ATLAS/ti's unique network building feature allows you to visually "connect" selected passages, memos, and codes by means of diagrams. This feature allows you to construct concepts and theories based on visible relations - often bringing to light yet other relations. You may instantly revert back to your notes or primary document selection at any time. Other features include: on-screen, drag-and-drop coding, single character minimum text unit, hypertext links between data segments, hierarchical browser for navigation inside project, and SPSS job generation.

HyperRESEARCH v. 2

Facilitates the coding, retrieval, and analysis of textual material. Reporting features include Boolean searches of code combinations. The built-in "Hypothesis Tester" uses artificial intelligence techniques to provide a semi-formal mechanism for theory-building. Using artificial intelligence techniques, HyperRESEARCH enables you to test hypotheses or propositions against each case in your study to see if your coding supports your ideas. You build 'if-then' rules, one at a time as shown below. Each rule you create is added to a rule list. When you are ready, you can choose to display the report generated from your rule list. Current v. 1.57 for MS-DOS and v. 1.56 for Macintosh, due to be replaced soon by v. 2 for Windows and Macintosh. Major enhancements include multimedia coding capability so you can code images, digital audio, digital video and off-line sources as well as text.

PC compatible (4MB RAM, 2MB HD); Macintosh (4MB RAM, 2MB HD)

NUD•IST 4

NUD•IST (Non-Numerical Unstructured Data – Indexing Searching and Theorizing) supports the qualitative analysis of on-line and off-line unstructured data. Retrievals use a complete set of Boolean operators on the indexing categories, as well as a set of non-Boolean operators which encourage the generation and exploration of new ideas. All retrievals are added back to the indexing system as additional indexing categories, and are available as the basis of further and more abstracted retrievals. To support emerging theory, indexing categories are independent objects which may be modified, titled, have text comments added, and be shifted to other locations in the indexing structure. NUD•IST 4 has a redesigned interface with "live" access to text coded at a node, offers the "explorer" display of an Index System integrated with hierarchical tree as option, is directly linked with Decision Explorer and Inspiration, has direct import and export from and to SPSS and any other statistics package, spreadsheet or table-based software. QSR Merge is now included and this also provides for the translation of projects between Macintosh and PC.

QCA

Qualitative Comparative Analysis version 3.0 is a special-purpose program designed to analyze quantified data from multiple cases. It is a theory-building, data processing program, not a code-store-retrieve program as such. It is built around Ragin's ideas on comparative analysis, using Boolean logic. The aim is to find patterns or configurations of variables within each case, and to show how, across a number of cases, these patterns lead to an outcome. The same outcome may in fact be achieved through different causal combinations, so 'families' of cases can be sorted out.

Video links

There's a WWW paper on this general topic, including discussion of software, by University of Toronto researchers:

http://anarch.ie.utoronto.ca/publications/vesda.html/

CVideo

Video annotation tool the helps you analyze, annotate and locate specific scenes on videotape or laserdisc. Cvideo integrates a special word processor with a video controller. The video controller provides direct control of your video player with single keystrokes and mouse clicks. The word processor lets you take notes and stamp start and end times that link each note to a video scene. Once a video is annotated, Cvideo can fast forward automatically to any video scene or note. Links the Mac to a video player via a simple cable. Does not need special video cards. Works with Sony camcorders, VCRs with LANC remote, Sony Vdeck and Vbox and Panasonic VCRs with 5 pin remote. Cvideo 1.5 can export data in NUD•IST format allowing access to all NUD•IST's features. Supports Apple Events and Apple Script.

MacSHAPA v. 1.0.3

MacSHAPA is a Macintosh-based software environment that supports observational data analysis, including the analysis of video. Qualitative and quantitative analysis activities are both supported. Users may simply browse video records, making unstructured comments that can later be searched or used to access interesting parts of the video. Alternatively, users may develop coding schemes within MacSHAPA, tag their video records or data files with these codes, and then use statistical routines to analyse the data once fully encoded. MacSHAPA can be used for observational studies in cognitive engineering, cognitive modelling, human-computer interaction, developmental psychology, group decision making and teamwork, CSCW environments, analysis of emergency response, and in many other domains.

The Observer v. 3

Professional system for collection, analysis and management of observational data. For 'live' data entry by a human observer or from video tape, using a desktop or hand-held computer. During an observation session, key presses are used to log events and the time at which they occur. You can also use a mouse or a computer pen as the input device. You can explore your data in time-event tables and plots, or generate reports with statistics on frequencies and durations, the sequential structure of the process or the co-occurrence of events. Video tape analysis system (Window only) allows time coding of videos for analysis.

Software to add?

If you are using or know of any software which will be of interest to academics in politics, sociology or social policy and it is not included in this Guide then please get in touch with the Centre and let us know about it. You might even consider writing a review of it for the SocInfo newsletter.

Concordance

Conc v. 1.71

A text retrieval tool which generates concordances and indexes, and then displays the original text, the concordance, and the index in separate windows. Clicking on a word in any one of the three windows causes the other two windows to display the entries for the same word. Conc permits the user to define the sorting order and to limit the concordance to words that match specified patterns (GREP expressions). It can also produce letter concordances to facilitate phonological analysis. Concordances can be both printed and exported to plain text files.

Macintosh SE/30 or higher, and about 2.5MB of RAM to process a novel.

Conc Version 1.71 is a beta test version offered as 'freeware' from ftp://ftp.sil.org/pub/software/mac

E-mail: academic.books@sil.org

Concorder

Concorder is a concordance package for the Apple Macintosh. It is available in English or French (the French version of the package is called Le Concordeur). It allows straightforward concordancing and indexing, and supports several modern languages, including Russian. Previously prepared text can be imported into the editor, or it can be entered directly, but at present the input must be in a single file.

Mac Plus or higher with a minimum 2MB RAM for a text of 500K.

Software and manual CDN\$100.00, US\$92.00.

Developed by: T. Patera, Department of Russian and Slavonic Studies, McGill University, and David Rand, Les Publications CRM, Université de Montreal, C.P. 6128
A Montreal, Quebec H3C 3J7, Canada.

Tel: 514-343-6111 ex. 4726;

E-mail: rand@ere.umontreal.ca

Availability: From David Rand, as above.

Review: Corré, A. D., 'Concorder: Concordance Software for the Macintosh',

Longman Mini Concordancer

Computers and the Humanities **26.5-6** (1992), 463-4.

A DOS-based concordancing/browsing package whose main function is to produce a Key-Word-In-Context (KWIC) concordance. The search string may be a single word, part of a word, or a regular expression using conventional wildcard symbols. Input to the program is normal ASCII text, rather than the pre-built indexes required by some programs. Limitations are its relative intolerance of non- English alphabets maximum 50,000 words text-size.

PC compatibles. (Hard disk desirable. Maximum text size depends on available RAM)
From book shops (ISBN: 03816-2) at a cost £132.87 incl. VAT.
Academic site licences costing £100.00 excl. VAT may be obtained
by contacting Denise Denney, Longman Group UK Ltd.,
Longman House, Burnt Mill, Harlow, Essex CM20 2JE, UK.
Refs: LMC Handbook (supplied with program) by Chris Tribble (1989); Tribble, and
Jones, Concordances in the Classroom (Longman, 1990).

MicroConcord

A concordance program developed specifically for the language teacher and learner. The program enables the user to search through texts for words or combinations of words. Each occurrence is presented in a line of context. The context of any given occurrence can be expanded, and concordances can be sorted and analysed in different ways including statistically.

PC compatible, MS DOS 3 or higher; a minimum of 220K RAM. Single user: £125.00; site licence: £295.00. Corpus collections A and B: £55.00 each. Site licence for corpus collections A and B: £145.00 each. Oxford University Press, Electronic Publishing, Walton Street, Oxford OX2 6DP, UK. Tel: +44 (0) 865-56767.

Oxford Concordance Program (OCP) and Micro- OCP

OCP makes word lists, indexes, and concordances from texts in any language and in any alphabet. It is a general purpose tool for text analysis and is suitable for applications such as stylistic analysis, vocabulary acquisition, dictionary making, textual editing, and content analysis. OCP operates on a raw text file and text can be prepared using any word processor that can produce a plain ASCII file. OCP accepts text in a variety of input formats. There are no restrictions on the use of characters in the text and up to 8 keyboard characters may be used to represent one letter. The text may contain editorial or other matter which is ignored by the program for the purposes of searching but included in the concordance contexts if desired. The user may define an alphabetical order. OCP is command-driven. The commands consist of simple English words. Every command has a built-in default and commands may be abbreviated down to the first three letters.

PC compatibles (MS-DOS, 512KB RAM, with HD).

OCP FORTRAN code runs on any mainframe/OS, incl. VM/CMS, VMS, UNIX.

Prices: single user: £175.00; depart. licence: £495.00; site licence: £1,000.

Micro-OCP from Oxford University Press, Electronic Publishing,

Walton Street, Oxford OX2 6DP, UK.

Tel: +44 (0) 865-56767.

Content Analysis

CETA

CETA, Computer-aided Evaluative Text Analysis, is a program for the analysis of texts. CETA is based on the NET method, which assumes that a text consists of a collection of statements which describes the relations between meaning objects, i.e., the words about which information is given. By parsing every sentence of a text, CETA represents the text as a network. Subsequent analysis of this network may reveal the discourse underlying the text.

PC compatible (640KB RAM, 200KB HD)

CLASS, v. 1.0

Class 1.0 is a menu-structured system to convert classifications of existing knowledge bases. Apart for an example knowledge base, a base for occupational classifications is available. The on-line help of the program gives information on menu options and on the base-dependent classifications. The feedback of the program is sufficient. Menus are well-structured. Data can be entered interactively or can be read from files with user-defined formats. The output of a conversion can be redirected to the screen, or to an ASCII output file, which also has a user-defined format. There are two manuals: one describes the Class program and the other describes the knowledge-based system for occupational classifications.

PC compatibles (640KB RAM, 1.3MB HD)

INTEXT 3.0

A menu-driven program for the analysis of texts. It will accept texts in most machine readable formats and produces results in a format compatible with the PC version of SPSS. It can create word lists with their frequency, reverse word lists, word sequences, KWIC/KWOC, content analysis with interactive coding of ambiguous and or negated search entries. The different modules for text analysis, can also be used separately. INTEXT performs the following types of analysis: content analysis, readability analysis, cluster analysis, correspondence analysis, personality analysis, and word analysis. The word lists can be manipulated with sorting, merging, and converting options, and including and excluding strings. (Windows version under development.)

PC compatible (RAM configured as EMS/XMS, 1.5 MB HD.

Cost: Contact Publisher, different versions for 386, 486 and Pentium. Academic prices from DM200 for student version to DM15000 for campus licence for Pentium version.

Commercial rate, 5 times academic rate.

PLCA v. 2.0

PLCA, Program for Linguistic Content Analysis, is an aid to perform statistical analyses with texts as data. PLCA provides a means for mapping texts into a data matrix that contains information on words and their interrelations. Each clause within a text is coded into a separate record of data. A feedback feature provides the coders with an ability to judge the accuracy of their coding. Records can be edited and deleted. The user can build vocabularies and "translate" the entire text back into linguistic form.

TEXTPACK PC v. 5.0

A system for computer aided text analysis, content analysis in particular. Originally designed for the analysis of open-ended questions in surveys, TEXTPACK has been extended to cope with many aspects of computer aided text analysis and most of content analysis. The majority of the procedures assists the user in exploring texts; two procedures are designed for purely quantitative analysis. Suitable both for the content analysis with a strict dictionary approach and for empirical approaches. Contains procedures which allow you to categorize, classify, and tag any kind of text according to so called 'content analytic dictionaries'. The process of text classification is the goal of TEXTPACK and, all other procedures function as service procedures which help to browse a text file, to develop and validate a dictionary, and to help you to use the final numeric output, for example frequencies of categories, with statistical packages for quantitative analysis.

Social Network Analysis

GRADAP 2.10

GRAph Definition and Analysis Package (GRADAP) is a complete package for the analysis of graphs and networks. Apart from the standard theoretical procedures, GRADAP 2.10 includes spatial autocorrelation and variance degree. GRADAP 2.10 is the only package available with a data structure especially designed for network data, facilitating data interface with relational database packages, such as dBase or INGRES. A hard disk and mathematical co-processor are required.

PC compatible \$535 (educational price) iec ProGAMMA, Grote Rozenstraat 15, PO Box 841, 9700 AV Groningen, The Netherlands Tel. +31 50 363 6900 Fax. +31 50 363 6687 E-mail gamma.post@gamma.rug.nl http://www.gamma.rug.nl

UCINET IV Network v. 1.4

A menu-driven program for the analysis of social networks. Includes measures of centrality and connectivity, methods of detecting subgroups and positions network hypothesis testing (QAP), Stochastic models (PI), multivariate techniques (MOS, cluster analysis, correspondence analysis, regression), and measures of similarity and dissimilarity. Also included are data transformation and management tools and a full featured matrix algebra.

Concept Mapping and Others

ARIADNE

Applies the Concept Mapping method, which 'maps' the way a group of participants perceives a complex subject matter. The central concept is broken down into items that are brought up by participants of a brainstorm session. The participants then receive a set of cards, each containing one item. They give priorities to these items and make clusters. Their answers are processed in ARIADNE by performing a principal components analysis, followed by a cluster analysis. This yields a point plot that can be adjusted interactively, e.g., by rotating the plot, assigning labels, and changing the numbers of clusters. This concept map illustrates the items that are distinguished and their priority. A subgroup of participants can be analysed and individual participants can be compared. Data output includes individual dimension scores and their standard deviations.

IBM PC with Win 3.1 (4MB RAM, 10MB HD)

Decision Explorer

Decision Explorer (formerly known as Graphics Cope) aims through the use of ideas mapping to allow you to gain insight into problems by helping you to manage the complexity of information. Concepts are entered, stored and structured in map form to allow them to be manipulated, explored and analysed. With idea-mapping every participant's contribution to the elements which effect the decision, problem or strategy can be recorded. This means that none of the expertise is lost, and contradictory and opposing views are captured, explored and worked through. When a solution is agreed upon the decision making processes behind it will be clear and traceable. In Decision Explorer the links which are drawn between concepts help reveal inter-relationships and the cause and effect of different elements which often provide useful insights.

DocuComp II

A powerful file comparison application which automatically identifies the changes in a document. DocuComp pinpoints minor and major changes, and then creates a new composite document. The 'Comparison Summary' and 'Revision List' offer a record of information about the compared files. Now part of Adobe File Utilities which includes Word for Word (format translator) and Viewer (view & print docs without original application). Docucomp is compatible with several word processors including Word 4 and 5.1. and WordPerfect. Much of functionality now built into Word 6 and Word 7.

Macintosh and PC compatibles (MS-DOS, Win3.1, Win 95), UNIX.

Inspiration v. 4.0

A graphic network diagrammer. Its diagram view lets you express your ideas visually while simultaneously creating an organized outline. It also helps you capture your ideas while quickly creating and updating diagrams. Can switch between diagram view and outline view. It gives you two ways to look at your ideas, from initial concept to final document. Can translate created diagrams into text outlines which can then be exported to word processor. Can be used for: Brainstorming: Plans, Meetings, Pre-production, Concept Maps, Cluster Diagrams, Storyboards, Web Page Design; Diagramming: Education, Re-engineering, Process Maps, Flow Charts, Tree/Org. Charts, Presentation Visuals, TQM; Writing: Outlines, Proposals, Executive Summaries, Scripting, Stories. Additional Features include, Spell checker, automatic Print to Fit, and Print Preview,

Martin 2.0

Designed for qualitative textual research. It offers researchers an alternative to fixed labeling schemes by using the computer screen as the electronic equivalent of a desktop. Documents and interview texts are displayed in windows that can be moved, stacked,

tiled, resized, or reduced to icons. Each text occupies its own window, and multiple texts can be displayed simultaneously, making it easy to work across texts. Notes can be attached freely and discarded at any time. All descriptions, key words, and commentary can be modified at any time as analysis progresses.

SemNet

The SemNet software is a general purpose knowledge mapping tool that allows individuals to organize ideas about any topic in the form of a network of concepts linked by named relations. The software is simple to use and is ideal for personal or social knowledge construction and elaboration, as well as for creating resource and reference materials offering easy, rapid access from multiple perspectives. SemNet creates a

Data Analysis - Concept Mapping and Others

hypertext environment in which ideas can be elaborated with pictures, movies, text, charts, sounds, etc. In addition, SemNet provides a continuously updated quantitative analysis of the knowledge structure being created.

Macintosh Free 1043 University Avenue, Ste. 215, San Diego, CA 92103 USA Fax: (619) 594-1692 Download from: http://apple.sdsu.edu/logan/SemNet.html

SKATE 1.5

SKATE is a graphical knowledge structuring tool based upon a model of argumentation. It allows argument structures to be built out of primitives such as "claim", "theory", which can then be linked using specific link types provided by the system. SKATE is built in HyperCard 2.2 and is available either as a HyperCard stack (needing HyperCard Player), or as a stand-alone.

StorySpace v. 1.5

A hypertext writing system for personal computers. The basic component in Storyspace is the writing space. This is an element that can hold any quantity of text and graphics, from one word to many scrolling screensful. A writing space can also hold other writing spaces - you just drag inside other writing spaces - and this gives Storyspace documents their intuitive hierarchical structure. A link is a connection that the author creates between parts of a Storyspace document. Links can go from any writing space to any other writing space - you just click on the two spaces with your link tool. Links can also go to and from words or phrases within writing spaces. The new Storyspace 1.5 for Macintosh can export hypertexts for use on the World Wide Web (coming soon to Windows). Create all the links you want, with the click of a mouse - then use Storyspace's tools to organize and link complex information, then translate into HTML.

Macintosh: (1MB RAM, 4MB recommended), Windows 3.1 or later (4 RAM). \$245.00 (Mac or Win), 1.5 upgrade (Mac) \$45.00, Ten-pack license (for Mac or Win) \$595.00, 100 pack license \$4995.00. Educational discounts available.

ThoughtPattern

ThoughtPattern allows you to store, cross-reference, and retrieve both free-form text. Instead of locking you into a predefined format, ThoughtPattern allows you to associate and locate information in many different ways. This gives you database capabilities for all your diverse, real-world information without requiring you to try to make it fit into the regular field and record format of traditional databases. ThoughtPattern is ideal for wrapping structure around information without cramming it into records and fields. ThoughtPattern is an enabling technology. It lets you manage and understand information in a way that paper and traditional databases simply can't.

SOSIG

The Social Science Information Gateway is a key entry to information on the Internet of interest to social scientists. It provides easy access to over 1,400 high quality information resources which have been described, classified and entered into a searchable database.

http://sosig.esrc.bris.ac.uk/

Courseware

Of the courseware material available for teaching sociology, social policy or politics probably the greatest amount is dedicated to research methods, and specifically statistics. Qualitative methods are poorly represented and resources outside research methods are a very mixed bag. There are programs but they are often either dated or US based.

There have been several centrally funded initiatives in the UK which have attempted to encourage the development of courseware in the UK. These include the first stage of the CTI in the early eighties, ITTI, JTAP and the more recent Fund for the Development of Teaching and Learning. The largest funded development of CAL courseware in UK higher education has been the Teaching and Learning Technology Programme (TLTP). However, this multi-million pound programme left much of the social science community behind. There is still arguably not one core piece of CAL courseware that could directly be used without modification in the disciplines served by SocInfo¹. This lack of development has added to a perception that technology has little or no direct application to the non-quantitative aspects of many of the social sciences. Consequently, with the exception of the Politics Case-Based Teaching project at the University of York. (see page 142), phase 1 and 2 of TLTP have not produced any subject specific courseware for teachers in sociology, social policy and politics.

Fortunately, several of the TLTP projects have included material in their projects which may be of interest to social scientists more generally. These are listed below. Also on the horizon is the JTAP funded coMentor project to support the teaching of social theory, but materials from this will not be available until the middle of 1998.

Outside the centrally funded CAL initiatives there has be considerable development of materials that whilst not supporting teaching directly, do serve as a foundation for student research and groupwork activities. These include data collections and bibliographical sources, many of which are available on-line. Many examples of these have been listed above.

TLTP Phase 1 and 2 catalogues are available on line. They gives details of all the projects and in fact several have produced CAL and related software of interest here. The full catalogue is at: http://www.niss.ac.uk/tltp

An Introduction to Regression Analysis using Minitab

This product consists of a computer-based tutorial and companion documentation; it is designed to introduce the concepts of simple linear regression, correlation and some more advanced regression models. It provides a self-teach facility for students who are not studying statistics as a mainstream topic, and support for those who are associated with project and research work which entails a statistical analysis of data. An overview of some theoretical/mathematical aspects of regression is presented. The product includes on-line Help, notepad facility and interactive test facilities.

PC compatible (4 Mb RAM, MS-DOS 3.1 or later, at least 8 MB HD).

Better Testing

'Better Testing' Question Mark Objective Testing Guide is a computerized guide to writing objective tests. 'It can help beginners learn the basics of good question writing and avoid common pitfalls. For writers who already have some experience, there is guidance on extending the range of questions set, finding distractors and setting alternative versions of questions for second and subsequent tests. Examples from a wide range of disciplines are included in the package, which also covers defining the aims of the test, drawing up the test specification, writing multiple-choice and other question types, test analysis and the use of graphics and multimedia in testing.

CCI v. 2.7

Illustrates some difficult statistical concepts, centrally that of confidence interval and its connection to the sampling distribution, the standard error of an estimate and hypothesis testing. Select among various types of parent distributions from which samples will be taken (normal, uniform, bimodal, log-normal, etc.) and difficult parameters to be estimated (mean, variance, standard deviation). The emphasis is given to graphical presentation of simulations results.

CHIPendale v. 3.34

A program for the statistical analysis of contingency tables (cross-tabulations). Designed for use by novices in social science data analysis, but also includes a number of advanced statistical features, e.g. direct standardization and 2x2x2 interactions. Used in a variety of courses, including introductory sociology, marriage and the family, social problems, sociology of education, 20th century U.S. history, the U.S. political system, and American electoral politics. CHIPendale's interface is menu-driven and intuitive. The StudentCHIP is a student version (\$5, site licences available)

ConStatS

ConStatS is a micro-computers based "concept piano" for introductory courses in statistics i.e. it enables student to develop a concrete understanding of the conceptual domain of statistics in the way a piano is used in music theory. There are five major parts: Data Representation (displaying data, summary statistics, transformations, describing bivariate data); Probability (measurement and distributions); Sampling (distributions, sampling errors, a sampling program); Interference (confidence intervals and hypothesis testing) and Experiment (Shepard - Metzler mental rotation experiment).

Data Collection Selection

Uses artificial intelligence strategies to aid in determining appropriate data collection procedures for research projects including participant and non-participant observations, mailed questionnaires, face-to-face interviews, telephone surveys, experiments and simulations. This expert system considers several factors of research projects and, based on indicated values for these factors, it rank-orders various data collection procedures and identifies the one most suitable for the project.

Mastering Statistics with Spreadsheets

A step-by-step approach on how to use spreadsheets (Excel) to calculate frequency tables, contingency tables, appropriate descriptive statistics etc.

Macintosh (System: 6.0.5 or greater, 1MB RAM) Cost starter: £41, Cost full user: £163 lab pack Capedia, 11 Lower Dagnall Street, St. Albans Al3 4PE Contact: Nick Leonard, Sales Director, Tel: +44 (0) 1727 869791

Models 'n' Data

Both statistical models and data can be examined. Techniques for analysing data range from stem and leaf plots to smoothed seasonal time-series plots, rotating 3D scatterplots and histograms. Models can be created and graphically displayed, ranging from simple discrete and conts distributions to 2-way ANOVA, and Markov chain models.

Macintosh (2MB RAM, System 6.0.5) Cost full user: \$85, Cost full site: \$399 Intellimation Library for Macintosh, Department 3FCH, PO Box 1922, 130 Cremona Drive, Santa Barbara 93116-1922, Tel: +1 805 685 8587 Fax: +1 805 968 8899

Multivariant World

Electronic lab allowing experimentation with multivariate probability models. Enables students to understand relationship between population and sample-based estimates. Up to three bivariate normal populations can be created with specified parameters. The program generates many different random samples and the influence of individual points can be examined.

Macintosh (2MB RAM, System 6.0.5) Cost starter: £31, Cost full user: £122 lab pack Maintained: Drexel University, Philadelphia Available: Capedia, 11 lower Dagnall Street, St. Albans Al3 4PE Contact: Nick Leonard, Sales Director, Tel: +44 (0) 1727 869791

ProCare Research Methods Module

A TLTP package aimed at undergraduate level nursing and social work, though some is relevant to students in sociology, politics or social policy. Offers a theoretical and practical overview of research methods, and then focuses on e.g. research appreciation and the task of producing a student dissertation. Main sections cover: Introduction to Research Methods, The Context of Research, Overview of Research, Social Survey, The Student Dissertation, Research Analysis and Bibliography. Also includes electronic versions of research case studies, including student projects, Glossary of research terms and definitions. Supports 100 hours of total student effort equivalent to 10 CAT credits.

PC compatible (Windows 3.1, svga monitor, 386+)
Free to public funded HE institutions in the UK.
ProCare, Institute of Health and Social Studies, Bournemouth University, 17,
Christchurch Road, Bournemouth. BH1 3LG

Quercus

Designed to teach basic statistical concepts and techniques, and an introduction to Minitab to Bioscience students. There are thirteen sections to the package which are all intended to be run in a one hour laboratory session and cover a specific topic e.g. Sampling theory. To accompany each section there is an exercise book which provides extra practice in applying the theory and a self assessment section.

PC compatible; Macintosh Cost: Free Quercus Project, STAMS, University of Strathclyde, Glasgow, G1 1XH E-mail: cal@stams.strath.ac.uk http://www.stams.strath.ac.uk/external/cal.html

QUTAL Queens University Belfast TLTP

Introductory Statistics for Social Scientists. The courseware is aimed at undergraduate Psychology students; it will also be of interest to Social Science students. (It assumes no prior statistical knowledge on the part of the user). There are three sections: Methodology and Design covers basic concepts and methods of measurement and experimentation, introduces simple designs and introductory modules on probability and hypothesis testing. Graphical and Descriptive Statistics introduces the student to the techniques used to display and describe data. Basic Statistical Tests introduces them to the more common tests used to analyse data in the field of Social Science. The tests include: t-tests and nonparametric equivalents, correlation, simple regression, and contingency table analysis, together with a flowchart analysis to indicate how the appropriate test is selected. Throughout the courseware extensive use is made of hypertext, graphics, animations and both interactive and closed simulations.

PC (486, SVGA, 4 Mb RAM, Windows 3.1); Mac (68030, 4 Mb RAM, System 7.x)

Reliability and Scale Construction

Introduces the concepts of scale construction and reliability analysis. Provides a self-teach facility for students who are not studying statistics as a mainstream topic, and support for those who are associated with project and research work which entails a statistical analysis of data. There is also an overview of relevant SPSS and Lisrel commands. Includes On-line Help, notepad facility and interactive test facilities.

For further details contact Noel Wilson or Prof. Sally McClean, University of Ulster.

SAMP Survey Sampling

A new tool developed at the University of Surrey to support the teaching of sampling procedures at undergraduate and postgraduate levels. SAMP simulates the attitudes of the population of a small town to the redevelopment of its centre. Four different sampling procedures are simulated: Simple random sampling, Clustered random sampling, Stratified random sampling, Quota sampling. SAMP allows the comparison of these methods. A bar chart showing the percentage of population having each of the attitude codes provides the user with a quick, visual confirmation their results. Developed by John McLoughlin, with original DOS version by Nigel Gilbert.

Topics in Research Methods: Main Effects and

Interactions

Gives students practice in discerning whether two or more independent variables in a given experiment are exerting main and/or interactive effects on the dependent variable. Covers, factorial designs and factorial design notation, 2 x 2 designs and strategies for judging what effects are apparent, a specific experiment's 2 x 2 design and related data displays, and 2 x 2 designs and the two-way and three-way interactions.

E-mail: eat@oup-usa.org

Topics in Research Methods: Power

Uses simulated experiments to acquaint students with the concepts of power and error variance. The program is based on an experiment testing a signalling device for home

cooling and allows students to run a variety of experiments comparing electrical consumption in homes with and without the device. Students can compare the result of the original experiment to an experiment that has a larger sample size; has a longer period of observation; increases the homogeneity of the sample; includes an extra source of variation; involves matched pairs; and uses repeated measures.

PC compatible Cost: \$60 single copy (6 pack deal available), £360 network licence Oxford University Press, 198 Madison Ave, New York, NY 10016 USA Tel +1 212 7266069 Fax. +1 919 677 1303 E-mail: eat@oup-usa.org

Topics in Research Methods: Survey Sampling

Introduces students to surveys and sampling procedures. Shows that any sample estimate has an associated error rate and that the precision of the estimate varies as a function of sample size. Students select a question from such topics as nuclear power, school busing, and government spending. They specify two sample sizes and the program selects two random samples. Alternatively, students can request one stratified random and one simple random sample. The program then conducts the polls and displays the proportion of respondents selecting each alternative along with the confidence interval.

A Cooperative-Competitive Game

Students of gaming, bargaining and conflict resolution have observed a tendency for people to compete even when they could do better by cooperating. This program, based on work by Deutsch and Krauss, puts each player in charge of a trucking firm that transports goods to destinations via various routes, one of which is a one-way road. Players earn points depending on their time to reach the destination, which is determined by an optimal combination of private vs. cooperative strategies.

Breach

Provides detailed information on law, theory and practice of taking action for Breach of a Probation Order. Starts from a tree structure from which the user can choose the main options - practice, policy, the law, key steps and letters - or sub-options. These lead on to provide detailed information about the area selected. Useful both as a learning tool for students and as a direct work aid for Probation Officers in understanding the process of breach and in the actual implementation of breach proceedings.

Community Mental Health Model

This regression-based simulation uses real data to show the strengths and weaknesses of this approach toward policy analysis. The program enables you to change artificially the values of certain variables e.g. reduce the alcohol abuse rate or raise the drug abuse rate. A regression equation shows the impact that each change has on other variables. Shows students how the predictive power of regression can be used by policy makers. v. 1.2

Hugin v. 4.0

A software package for construction of model based expert systems in domains characterized by inherent uncertainty. It contains an easy to use probability based deduction system, applicable to complex networks with cause-effect causal relations subject to uncertainty. The implementation is based on an improvement of the award winning work by Lauritzen and Spiegelhalter: Local Computation with Probabilities on Graphical Structures and their Application to Expert Systems.

PC compatibles (Win32s,4 MB RAM, Windows 95, Windows NT)

Multi-user system: Sun SparcStation (SunOS, 4.1.x)

Interact

Interact lets you simulate social interactions. You identify the kinds of people who are present. The program reports what kinds of behaviors might occur, what emotions people might feel, how the people might change their views of each other as a result of actions, and how changes in scene might affect behaviors. Interact is based on affect control theory, the idea that people try to conduct themselves so their feelings are appropriate to the situation, and if their actions aren't working to do this then they change their views of the situation.

Macintosh and PC compatible

Leonardo

This expert systems development tool provides a powerful and flexible environment for the rapid development of applications. Leonardo provides rules, objects, classes and frames with attractive user interface utilities. Its combination of functionality and ease of use has made it particularly popular in the educational environment.

PC compatible (MS DOS or Win 3.1) £2,495.00, CHEST Price: Dept. licence £995 (DOS) £1495 (Win) Bezant Ltd, 6 St Mary Street Wallingford Oxfordshire OX10 0EL Tel: +44 (0) 1491 826005 Fax: +44 (0) 1491 825687

Model Builder

Model Builder enables users, including complete novices to build models, and to interact with the models supplied. It is particularly useful for models which depend on quantitative relationships, including dynamic models where the numbers change over time, for example population growth.

PC compatible

£95 (Single copy) £300 (Site licence) UK tertiary educational establishments only Modus Products, 1 St James Road, Harpenden, Hertfordshire, AL5 4NX http://www.modus-interactive.com/

Model Maker

A software environment for the design, construction and analysis of simulation models. Models are constructed conceptually using a diagram which shows the relationship between various elements. Each element has an equation which can be viewed, manipulated and evaluated. ModelMaker comes with a valuable range of model analysis tools including optimization, confidence interval calculation, minimization, sensitivity and stochastic analysis. A range of tutorials and examples drawn from many disciplines are provided.

PC compatible (Win. 3.1+, 2MB RAM) £349 (15% Educational Discount) Vicky Jones, Cherwell Scientific Publishing, The Magdalen Centre, Oxford Science Park, Oxford OX4 4GA Tel: +44 (0) 1865 784800 Fax: +44 (0) 1865 784801 E-mail: modelmaker@cherwell.com http://www.cherwell.com/cherwell

Monte Carlo Simulation Demonstration

This True Basic program performs a simple Monte Carlo simulation with a graphic output so that students can observe the results. It demonstrates the fact that simulation does not produce exact results but does produce very close estimates. Simulates a waiting line problem at an automatic teller machine; customer arrival times and customer service times are modelled.

NeuDesk v. 3.0

A spreadsheet driven neural network application development tool. For those with no previous experience with neural networks, NeuDesk automatically selects the network topology and training method. NeuDesk provides facilities for data input and output, selection of training methods and some control over network topology. Neural networks developed using NeuDesk can be used with both NeuRun and NeuModel products which are described elsewhere. NeuDesk is supplied with NCS' standard four training algorithms, Standard back-propagation, Stochastic back-propagation, Quickprop and Weigend weight eliminator.

PowerSim 1.1

PowerSim is a simulation and modelling environment for MS Windows. It provides a range of features for developing simulations for education and training and is compatible with Stella for the Apple Macintosh.

PC compatible (Win 3.1) £590, Educational price - £295 Electric Brain Company, 13 Queen Square, Leeds LS2 8AJ Tel: +44 (0) 113 2428928 Fax: +44 (0) 113 2428696

Simulink

An interactive environment for modeling and simulating a wide variety of dynamic systems, including linear, nonlinear, discrete-time, continuous-time, and hybrid systems. It combines the power and ease-of-use of an application package with the flexibility and extensibility of a language. Simulink lets you build block diagram models with click-and-drag operations, change model parameters on the fly, and display results "live" during a simulation. Simulink is built on top of the MATLAB Technical Computing Environment.

The Student Edition of Simulink, a limited version of Simulink for a student's home computer, is available through Prentice Hall.

PC compatible (Win 3.1, 95, NT, 4MB RAM, 2MB HD), Macintosh (4MB RAM, 2MB HD), UNIX.

Internet

Most people are now aware of "surfing the web" with World-Wide Web (WWW) browsers and many lecturers are now making material available on the Web and many students are exploring the Web for information for their coursework. There is clearly not space in this guide to list all the resources of relevance to sociology, social policy and politics that are accessible on the Internet, and nor would it be appropriate. The best way to find out about them is to start from the SocInfo WWW site and follow the links. http://www.stir.ac.uk/socinfo/ Below are given just a few of the resources of interest, namely electronic journals.

Both browsing the Web and developing material for it requires software. In the following section there are brief details of some of the most common browsers and some of the popular HTML editing programs which enable you to create your own Web pages. However, in reality, preparing Web pages and setting up and running Web sites requires a lot more than just a browser and an HTML editor. There is not space here to list all the additional software that is available (like image preparation), but fortunately there is online information about many of the programs. This comes from the survey, *Software Tools for the World-Wide Web* done in October 1995 to May 1996 by Tony McDonald, David Surtees and Janet Wheeler at the University of Newcastle. The aim of this project was to perform a cross-platform (Macintosh, UNIX and Windows) survey of WWW software tools and to report briefly on as many as possible under the constraints of time, software costs and equipment available. The contents of the report can be found at the URL: http://www.ncl.ac.uk/wwwtools/

The market is very volatile and there is a huge number of tools, with more appearing almost every day. Because of this the survey concentrated mainly on servers, browsers and HTML tools; coverage of other areas was of necessity somewhat patchy due to time constraints. The survey identified 33 servers, 38 browsers, 82 HTML tools and 61 miscellaneous others, including log analysis, helpers, graphics, image maps and bookmark managers, plus 12 on-line tools, mainly HTML validation services. Almost all of this is free or shareware and downloadable from the Internet. Bear in mind though, that this information is now rapidly becoming dated. For example, version 4 of both Netscape Navigator and Microsoft Internet Explorer are just being released. They were at version 2.0 in the survey. However, as long as you are prepared to find out about latest versions (and the survey gives links to the sources), you can easily update most of the information yourself.

One big change that has happened since the end of the Newcastle survey is the growth of interest in and use of Java. This is a new programming language, designed amongst other things to be run by downloading over the Internet. It is now being widely used to extend the functionality of Web pages. Navigator (since v. 3.0), Hot Java, Cyberdog and now Internet Explorer (with version 3.0) support it. Some believe that Java will bring about another revolution in micro-computing because all Java programs are by definition cross-platform. As long as the computer and its operating system (or Web browser) supports Java then it will be able to run programs written in Java. It will no longer matter whether the machine is a Macintosh, PC compatible, UNIX workstation or even a Network

Internet

computer, nor whether it is running MacOS, Windows 95/NT, Solaris, X-windows etc. From the point of view of creating WWW content, it is unlikely that many lecturers will want to or be able to create Java programs. Others will do that. For now it is sufficient to ensure that your Web browser supports Java. At a broader level, by the time the next edition of this guide is published we shall be able to judge just how much difference Java has made and whether it has really produced a revolution in computer use.

Electronic Journals

Annual Reviews Sociology On-line

Facilities include: abstracts of articles for the past 12 years, full text of articles, 1993 - 1996 at \$5 (using credit card), over 6000 selected references to the literature. These can be searched, printed and browsed.

http://www.annurev.org/series/sociolgy/sociolgy.htm

Canadian Journal of Sociology

Since its founding in 1975, this has been a source of information on Canadian society, as well as new trends in the discipline internationally. Gives contents pages for the printed version, and on-line versions on a few of the included papers.

http://gpu.srv.ualberta.ca/~cjscopy/cjs.html

Electronic Journal of Sociology

Refereed journal publishes scholarly research on sociological knowledge in both HTML and ASCII formats. The pre-print feature and web discussion provides the opportunity for interactive discussion amongst the journals' editors, readers and authors.

http://olympus.arts.ualberta.ca:8010/

Future of Children

Published three times a year, this publication is distributed free of charge. Its purpose is to disseminate timely information on major issues related to children's well-being.

http://www.futureofchildren.org/

Journal of Criminal Justice and Popular Culture

Publishes reviews of all types of popular culture artifacts and original essays pertaining to the intersection of popular culture and criminal justice.

http://www.scj.albany.edu:90/jcjpc/

Postmodern Culture

Published three times a year by Johns Hopkins University Press with support from North Carolina State University and the University of Virginia's Institute For Advanced Technology in the Humanities. Only the latest issue is available on-line. Back copies are available in paper form or by subscription.

http://jefferson.village.Virginia.EDU:80/pmc/

SCROL

A new international journal published in the English language which promotes rapid communication among sociologists. Sociological Research On-line is supported by the Joint Information Systems Committee's Electronic Libraries Programme (eLib). It is managed by a consortium of the Universities of Surrey and Stirling, the British Sociological Association and SAGE Publications. It brings together peer-reviewed articles and debates concerned with the application of sociological forms of analysis to a wide range of public issues and private concerns.

http://www.soc.surrey.ac.uk/socresonline

Social Research Update

Social Research Update is published quarterly by the Department of Sociology, University of Surrey, Guildford GU2 5XH, England. Subscriptions for the hardcopy version are free to researchers with addresses in the UK,

The Qualitative Report

An on-line journal dedicated to qualitative research and critical inquiry

For more information, E-mail Ron Chenail at ron@nsu.acast.nova.edu http://www.nova.edu/ssss/QR/index.html

Internet – Web Browsers

Web Browsers

Cyberdog 1.1

Cyberdog is a suite of Internet applications based on Apple's innovative OpenDoc technology. Supports most basic HTML (forms tables etc.), and via OpenDoc supports e.g. QuickTime movies. Needs the OpenDoc system extensions to run. With the Java Runtime for Mac installed, Cyberdog can run Java applets. OpenDoc for Windows is in development by IBM and should be available in early 1997

Macintosh (Java - PowerPC only)
Free
Apple Computer
Download from http://cyberdog.apple.com/

HotJava 1.0

Written entirely in Sun's Java programming language, HotJava was developed to demonstrate the possibilities of Web applications with downloadable client-side executable content.

PC compatible with Win 95 or Win NT, UNIX (Macintosh v. in development)
Free
Sun Microsystems Inc., Mountain View, CA

E-mail: java@java.sun.com
http://www.javasoft.com

Microsoft Internet Explorer 3.0.1/4.0

Just over a year ago Microsoft had no browser to speak of. Now there is Microsoft Internet Explorer (MIE) 3.0 for PC, Mac and UNIX. The program is fast and has a small memory and hard disk space footprint. The help system is accessed locally (i.e. all the HTML documents are stored on the local hard disk), so the browser can be used off-line and help documents appear quickly. As it uses the Netscape 2.0 plug-in technology, most plug-ins should work well. HTML innovation includes support for cascading stylesheets. Supports QuickTime and AVI video, AU, AIFF, MIDI and WAV sound without the need for plug-ins, shows GIF animations, shows VRML 3D using QuickDraw 3D on the Mac or Windows 3D add-in. Font sizes of the main window can be changed very easily - useful for the visually impaired. Version 3 supports Active-X and Java (with a choice of Java Runtime interpreters) and version 4 should support JavaScript (so far only available in Navigator). Version 4 was in beta testing at the time of publication. The Mac version uses Internet Config to harmonize with other Internet applications and understands a large set of AppleScript events.

Macintosh (68k & PowerPC), Windows 3.11/95/NT, UNIX
Free
Microsoft
Download from http://www.microsoft.com/

NCSA Mosaic 2.0.1

NCSA Mosaic has a smaller memory footprint than Netscape, and its unique 'kiosk' feature whereby people can use a subset of its functions make it very useful in environments such as information points. As the source code is available to academic and non-profit institutions, it is theoretically possible to change the nature of the browser to whatever you want it to be. Development of NCSA Mosaic has waned somewhat, but it is still useful for those who want a robust, simple web-browser and do not need extensions such as Shockwave, QuickTime movies or RealAudio sound. No 'plug-in' capability. Does not understand animated GIFs, nor inline JPEGs. Understands tables. A fairly stable alpha version of version 3 is now available.

Macintosh (68k & PowerPC), Windows 3.11/95/NT, X-windows Free National Center for Supercomputer Applications http://www.ncsa.uiuc.edu/SDG/Software/

Netscape Navigator 3.01

At one time the de-facto standard web browser, with an overwhelming majority market share Navigator is being strongly challenged by Microsoft with Internet Explorer. However it is still probably the most popular browser. It offers many advanced features, such as support for Java (except in the Win 3.1 version) and third-party plug-ins. Netscape has moved rapidly from version 1.1N to version 3.0, supporting JavaScript, Java, plug-ins for different media-objects (QuickTime movies, VRML Shockwave etc. over 50 listed on Netscape's WWW site). The browser includes built-in facilities for reading and sending E-mail and newsgroups. Very full set of HTML features supported include tables, forms, frames, animated GIFs, background GIFs, client side image maps. Version 4, due out in early 1997 as part of the Communicator suite, should see support for cascading style sheets and on the Mac it is planned to deliver Navigator as a set of OpenDoc parts.

Macintosh (68k & PowerPC), Windows 3.11/95/NT, X-Windows, Solaris. Free to students and staff of educational and non-profit organizations, otherwise US\$49.00

Netscape Communications Corporation http://home.netscape.com/

Download: ftp://sunsite.doc.ic.ac.uk/packages/netscape/pub/navigator/3.01/

HTML editors

BBEdit

BBEdit is essentially a text editor designed to be use by programmers, but is included here because of the excellent 'extensions' that are available enabling it to function as a full HTML editor. These include BBEdit HTML extensions (release 13) and BBEdit HTML Tools (1.3 or 2.0). The last of these appears in the program as a set of configurable buttons on a toolbar which enable rapid writing and formatting in HTML. Supports HTML 3 and Netscape extensions. No built-in page preview, but can be run alongside your favourite Web browser so you can see the results of your HTML script.

Macintosh

Freeware (the Lite version), £89.50, Education £58.99 Full Moon Software, PO Box 862, Maidenhead, Berks. SL6 0QJ. UK Tel: +44 (0) 1628 660242 Fax: +44 (0) 1628 666084

http://www.barebones.com/

Lite version available from: http://www.barebones.com and various info-mac mirrors such as SunSite (see page 181).

BBEdit HTML Tools (1.3 or 2.0)

An integrated HTML editor for the BBEdit text editor by Lindsay Davies. Two versions exist at present, 1.3 for the "Lite" version of BBEdit and version 2.0 for the full (commercial) version of BBEdit. Supports HTML 3 and Netscape extensions.

Macintosh

Free for non-commercial users. Commercial users need to pay a fee.

Download:

ftp://ftp.barebones.com/pub/third-party-extensions/HTML_Tools_v1.3.hqx

Claris Home Page v. 2.0

WYSIWYG, web-authoring program that provides the ability to design and develop customized web pages without having to learn HTML or programming. Capabilities include, frames, tables, libraries, multimedia plug-in support, built-in remote site publishing, the ability to edit raw HTML. Includes 25 site templates that are provided for the creation of a Personal Page, Calendar, Newsletter, Presentation, or Small Business Presence.

Macintosh (8MB RAM), PC compatible (Win 95 or NT- **NOT 3.1**-, 8/16MB RAM) \$99 (Education \$59) Claris International Inc., 1 Roundway Avenue, Stockley Park,

Uxbridge, Middlesex UB11 1BG. Tel: 081-756-0101; Fax: 081-573-4477;

http://www.claris.com

GNNpress

A full WYSIWYG editor which includes a built-in link checker and a limited page management facility. Editing takes place directly in a fully-functional browser window with drag and drop editing within and between windows. In addition, the raw HTML can be viewed and edited. Has a table editor that supports attributes and facilitates the creation of complex tables, including nested tables. Includes a form builder, but you still have to create your own CGI scripts to handle the output.

MacOS (System 7+, 7MB HD, 8MB RAM), Windows, (486 recommended, Win 3.1, 95 or NT, 8MB RAM), UNIX
Free
GNN/America Online
http://www.gnnhost.com

Hotmetal 2

Hotmetal is a semi-WYSIWYG editor which includes document validation for HTML 2, HTML 3 and Netscape extensions. A comprehensive toolbar arrangement for insertion of HTML tags. Images, links, text styles and tables are shown WYSIWYG (forms are not). HTML tags and URLs can be shown or hidden, thus providing a reasonable preview. With rules checking turned on, makes it virtually impossibly to write incorrect HTML. The Pro version includes SoftQuad's MetalWorks, updated rules files, imagemaps, spelling checker and multi-browser document checking.

Internet – HTML editors

Macintosh (68K & PPC), Windows 3.1/95/NT, Unix (Solaris)
Free. Pro version 2 costs \$195
Available from: SoftQuad

Download Windows or Mac v. from: http://www.softquad.co.uk/

Internet Assistant 2

An add-on to Microsoft Word which enables the conversion of Word files to a sort of HTML. Many people would want to use an editor on the HTML produced. Headings are distinguished by the use of font sizes - the heading tag seems to be absent entirely from the user interface and documentation (although it can be edited into the source manually). Poor support for named anchors. Images copied to the same folder in which the document was saved as HTML but renamed to something meaningless, and a transparent GIFs become non-transparent. Background and text colours can be picked from a limited colour palette.

Macintosh, Windows (16 bit version 1 or 32 bit version 2) Free

icrosoft

Download from: http://www.microsoft.com/

Microsoft FrontPage 97 with Bonus Pack

With a redesigned interface, it now resembles Word 7.0. Supports page creation and site management. There are buttons for inserting tables and form elements, and the text formatting tools include heading sizes in the styles drop-down menu and Netscape font sizes on buttons on the toolbar. Notable limitation is inability to edit HTML label text. Graphics can be imported but not edited. Comes with a good collection of 'wizards' and 'bots' to help you design the page. Drop WebBot components onto your pages to add functionality such as full-text searching and forms. Supports JavaScript and Microsoft Visual Basic Scripting Edition, using an intuitive user interface, and connection to databases and insertion of ActiveX controls, Java applets, and Netscape plug-ins for interactive Web pages. Images can be designed in the included Microsoft Image Composer or professional photographs incorporated from the Microsoft Image Composer stock photo library. Includes tools to remotely author and edit your Web sites. Uses the shared spelling checker, global Find and Replace, and the Microsoft Thesaurus from Office 97.

PC compatible (486+, Windows 95 or NT, 8MB RAM (95), 16MB RAM (NT), 15MB HD) £99 approx. Microsoft Tel. +44 (0) 345 002000 http://www.microsoft.com/

Navigator Atlas Gold (3.0)

A browser/WYSIWYG editor with tag insertion from toolbar and menus. Does everything the Navigator browser does and supports switching from browsing the page to editing the page. New documents can be blank, created using Netscape's Page Wizard or created from a template. The last two options mean a connection to Netscape's web site. The templates option also gives: page style guides, clip-art (animated GIFs, mozilla illustrations, rules and bullets), backgrounds, Java & JavaScript resources, design tips. Tables design is WYSIWYG, with cells expanding as you type. Text, link and background colours and background image can be easily set. Forms do not seem to be handled and forms in existing documents are not displayed. Frames are not handled. The raw HTML can be viewed but not edited directly. Documents displayed in the browser can be saved to the local machine and edited. If relative URLs are used on the page, the user is prompted as to whether they are to remain that way, and whether local copies of any images on the page should be saved.

Macintosh (PPC only), Windows 95/NT, UNIX
Free to students and staff of educational and
non-profit organizations, otherwise US\$79.00
Netscape Communications Corporation
http://home.netscape.com/

Download: ftp://sunsite.doc.ic.ac.uk/packages/netscape/pub/navigator/gold/3.01/

PageMill 2

Adobe PageMill is a full WYSIWYG HTML editor. There is little for anyone who uses this program to learn HTML and the program supports probably the widest range of HTML facilities including tables, forms and frames, but still not meta tags. It has full 'drag & drop' capabilities, and this is used to create links between web documents at the same site, though external links need to be typed in or entered from saved bookmarks. Excellent support for images, allowing the user to import images in several formats, scale these images, select transparent colours and add clickable map capabilities to them. Supports easy construction of sever-side or client-side image maps.

Macintosh and PowerMac, Windows 95/NT, **NOT** 3.1 £70, academic discounts available. Adobe Systems European Headquarters, Adobe House, West One Business Park, 5 Mid New Cultins, Edinburgh EH11 4DU, Scotland, United Kingdom Tel: +44 (0) 131 453 2211 Fax: +44 (0) 131 453 4422 http://www.adobe.com

Glossary of Internet terms

Α

Acceptable Use Policy

This refers to policies that restrict the way in which a network may be used. Usually, a network administrator makes and enforces the rules. There is an Acceptable Use Policy governing JANET, the UK academic network, to which all Universities must comply. Details can be found on NISS.

ActiveX

Microsoft's key Internet component technology to compete with Java. Designed to originate on Windows machines, thought it will be viewable on other platforms.

ADN

Advanced Digital Network. Usually a network operating on a 56 Kbps leased-line.

Advanced Research Projects Agency Network (ARPANET)

The Internet's grandfather, ARPANET was born in the late 1960's by the Defense Department. The US government wanted to develop a widearea-network that could survive a nuclear war. The project started small -- three computers in California connected to one in Utah -- but has grown up and developed into the Internet we all know and love!

Agent

Software which performs operations such as file extraction and preparation for an application. There are now agents available to search the WWW for information you would like in ways that respond to your past interests.

Alias

An alias is short and quick nickname to refer to something else with a longer name. For example, to E-mail Brian, I just type "brian" instead of "crandallb@hud.ac.uk". The same would apply for a system resource or application that you assign a "nickname". Also used to refer to icons on the Mac desktop which are alias of the 'real thing' but allow convenient placement without confusing the actual storage of files.

Alpha testing

Testing of software usually done inside the software company to eliminate major bugs. Only then is software sent outside the company to "beta" testers.

Anonymous FTP

Logging on to a server anonymously allows you to access and download files in the public domain. If you are logging on to an FTP site from your web browser, chances are you will be logged on as "anonymous" automatically with your E-mail address as your password. The majority of FTP sites support anonymous access.

Applet

A (usually) small program written in Java designed to be downloaded automatically over the WWW and run on your local machine. Used to add functionality to WWW pages.

Application

Applications are also called "apps" or simply "programs". Some common Internet applications include FTP, E-mail, and Telnet. Netscape Navigator and Microsoft's Internet Explorer are also common Web applications.

Archie

Archie is a program that allows you to search the Internet for files located anywhere by their names. Once you've located them, you can use FTP to download them.

Archive

Archives are collections of files stored on servers. FTP sites are typical examples of archives.

ARPANET

See Advanced Research Projects Agency Network.

ASCII

The American Standard Code for Information Interchange is the global standard for converting Latin letters and numbers into the binary code that computers recognize. Each ASCII code can be represented by a 7 digit binary number from 0000000 to 11111111.

AUP

See Acceptable Use Policy.

Authentication

The process of entering your username and password is known as authentication. You prove, or "authenticate", that you are who you say you are when you enter your password.

В

Bandwidth

A measurement of the amount of data that can be transferred over a network connection. The pipe analogy is a good one – the bigger the pipe, the more water can flow through it. Bandwidth is usually measured in bits-per-second (bps).

Baud rate

A term used to measure transfer speed over an analog circuit such as a plain old telephone service (POTS).

BBS

Bulletin Board System. A system that lets you post and read messages. You can read other messages, or wait a bit until someone responds to your "post". Most software/hardware vendors maintain a BBS to provide technical support and allow registered users to download patches and updates.

Beta Test

After alpha testing, software manufacturers like to send out their applications to "beta testers" before they release the product to the general public. Beta testers are end users eager to play with the new software. In return for their sneak previews, the testers make suggestions, ferret out bugs, and hopefully generate enthusiasm for the product's release.

Bit (Binary digIT)

A bit is the smallest unit of measure for computer data. Bits are represented by binary digits, and can be either on (1) or off (0). Bandwidth is usually measured in bits-per-second (bps).

Bounce

What happens to E-mail that for some reason doesn't get to where you sent it. A "bounced" message returns to you and usually includes "Message Undeliverable" in the subject line. Common causes are that the recipient has moved addresses or that their mail box is full.

bps (Bits-Per-Second)

A unit of measurement that describes how fast data is transmitted across a digital circuit. Usually, modem speed is described in bps. For example, a "28.8 modem" can transfer 28,800 bits per second.

Browser

Software used to view World Wide Web pages, either on the Internet or, increasingly frequently, inside companies, on an Intranet. Initially browsers are being used to run Java through built-in Java compatibility, but Java will soon be built directly into PC operating systems and run applications without the need for browsers. Cyberdog on the Mac and Microsoft Internet Explorer support Java in this latter way.

Glossary of Internet terms

BTW

"By The Way" Often used in IRC chat sessions or e- mail, sometimes sarcastically.

Byte

A byte is a group of bits (usually 8), and conventionally can hold enough information to store one alphanumeric character. Storage space is usually measured in bytes. For example, a 500 megabyte hard drive will store around 500 million bytes.

C

CGI

Common Gateway Interface. The specification of how WWW browsers can communicate back to servers and how servers can communicate with other programs to do things like look up information in a data base or respond to a click on an image map on a Web page.

CHAP

Challenge-Handshake Authentication Protocol. Another way to prove you are you are. CHAP allows you to login to your IRC without a terminal screen. This method is more secure than password authentication (PAP) because there is never a text based password.

Chat

See IRC.

Client and Server

When you and your computer are searching for or accessing information on another computer, you are the client. The other computer is the server, and together you are using client/server technology. The server stores the info and makes it available to all authorized clients.

Component Technology

The breaking up of programs into separate "components" which can be transferred easily between different applications and even operating systems. Components may be mini-programs, such as a spellchecker, or data, such as

a spreadsheet report which can be shared across applications and edited without the original program which created it.

Crackers

People who sneak through cracks in firewalls. They steal stuff and mess with stuff. They crack the system.

Cyberspace

William Gibson coined this term in his novel *Neuromancer* while describing "the world of computers and the society that gathers around them". Sure to go down with "re-engineering" and "information superhighway" as one of the most overused words of our decade.

D

Daemons

Applications on servers. A example is httpd – the program that serves up WWW pages and farms out CGI tasks (such as responding to forms) to other server daemons.

Data Encryption Key (DEK)

Locks up and encrypts your precious and sensitive data.

Data Encryption Standard (DES)

Commonly used encryption method on the Internet. The subject of much debate since the US government wants to keep a "back door" entry into all encryption systems. The UK government wants the same but is more coy about admitting it.

Dedicated Line

This is the extra phone line you get when your family and friends complain that no one can get through because you're always on the Internet.

Dialup

The most common way to access the Internet outside universities. A dialup connection uses a modem to connect one computer to another across regular phone lines.

Discussion Group (or Forum)

A Discussion Group is the Internet's version of a Bulletin Board. Users E-mail

messages and respond to other users' posts about specific topics and interests. Some great and current information is shared in these discussion groups, others are full of ignorant bigots. Chose the ones you like.

Domain Name

www.hud.ac.uk is a Domain Name. The first part is who you are, the second part shows the kind of site and where it is. Suffixes such as .uk, .fn, .ca, or .it mean United Kingdom, France, Canada, Italy. By convention if there is no country suffix it means the USA. Other common suffixes are .ac, .edu, .gov, .com and .org. that stand for academic (usually only in the UK), educational, government, commercial and organisation. Domain Names are unique, and are registered through a governing organization called InterNIC. Some domain names are registered but not "active", that is, you can't visit them with your Web browser. Some businesses register their Domain Names so they can have an Internet Email address, but don't develop a real Web site. Other sites are just "under construction".

DNS

Domain Name Service. The DNS allows you to access a site with its Domain Name instead of its numerical IP address. In other words, you can remember "www.hud.ac.uk" instead of 112.4.161.2.

Ε

E-mail

Electronic Mail. Fast, convenient mail messages sent electronically from one computer to another. Most E-mail systems have facilities so that you can send binary enclosures or attachments such as computer files and programs.

E-mail Address

An E-mail address like ctisoc@stir.ac.uk is made up of two parts, the username and the host name. They are separated by an @, and when you tell someone your E-mail address you say, "ctisoc at

stir dot ac dot uk". Your username must be unique on your server, and the host name is a name unique on the Internet chosen by the server. The host name might have several parts separated by full stops (stir.ac.uk). These other sections are called subdomains, and are common on large company or university servers.

Encryption

Encryption encodes packets of information as it's transferred across a network. Only the correct recipient will have the electronic "magic number" needed to read and receive the data.

Ethernet

The most common way of connecting computers in a local area network (LAN). This cable ties your department computers together, and allows you to transfer information to other clients in your network at up to 10,000,000 bps.

F

FAQ (Frequently Asked Questions)

A FAQ is a compilation of Frequently Asked Questions, that exists on many Web sites, and nearly every Discussion Group or BBS. They are often the source of excellent and very up-to-date and specialized information. Before posting a question on a Discussion Forum or BBS it's a good idea to skim through the FAQ. If you ask something that the active users just got finished beating to death, it's likely you will receive a rather terse, "RTDF" (Read the dammed FAQ.)

Fibre Distributed Data Interface (FDDI)

Speeding along data on a fiber optic cable at about 100,000,000 bps (10 times as fast as Ethernet and 3500 times as fast as a 28,800 modem). Many universities are now in the process of replacing 10 Mbps Ethernet with 100 Mbps FDDI

Finger

This command lets you get information about someone on the net. It is a UNIX command, (but finger utilities exist for

Glossary of Internet terms

other OS's) and will tell you if someone else is logged on, if they have unread mail, etc.

Flame

Ranting and raving, through E-mail. What might seem rather mild comments face to face can seem very pointed and personal when received in an E-mail message. Generally not good E-mail manners (netiquette), though some self-aware users put <Flame on> and <Flame off> before their comments so that the reader knows better how to read them.

Firewall

A LAN's primary line of defense against hackers and crackers. The firewall separates the LAN into public and private sectors, and, theoretically, the private stuff is accessible to only those inside the wall.

Follow-up

Replies to E-mail or posts on discussion forums or newsgroups are sometimes called follow-ups, or threads".

FTP

File Transfer Protocol. The most common way to download and upload (get and put) files on the Internet. When you download something from SunSite Europe at Imperial College, you are connected to an FTP site, and your computer and the server use FTP to send you the file. Most WWW browsers give access to FTP sites, you just don't get any fancy text and graphics.

FDDI

See Fiber Distributed Data Interface

G

Gateway

The old name for the link between networks that can't communicate otherwise (e.g. a LAN and the Internet). The new name is router. Your ISP uses a router or routers to connect your dialup call to the Internet.

Gopher

A pre-WWW system. Implements hyperlinks like WWW but without the text and graphics pages. Gopher servers can be searched using programs like Veronica or Jughead. Most WWW browsers now allow access to Gophers in the same way as the WWW, you just don't get the fancy graphics.

GIF (Graphics Interchange Format)

A graphics file compression format that is commonly used on the Internet to provide graphics images in Web pages. These graphics are viewable across multiple OS platforms. The GIF89 format now allows transparent backgrounds and animated images. For small images that need no sound this is a simpler and more compact method that digital video. Most browsers support GIF89 now.

GUI

Graphical User Interface. The part of the operating system which presents windows, menus, dialogs etc to the user. First developed at the Xerox Palo-Alto Research Center in the late 1970s, the most famous implementation is on the Macintosh. Now generally agreed that a GUI makes computers easier to use.

Н

Hacker

Originally used just to describe obsessive programmers, "hacker" was then used to describe burglars and snoopers of cyberspace. The word now usually describes folk who just like to poke about and check things out. The destructive and malignant folk are now called "crackers".

Host

Usually refers to a server machine that allows client machines to visit, access, and share files.

Host Address

The address of a host computer on the Internet.

Hostname

A host computer's Internet name. (i.e. www.stir.ac.uk)

Hypermedia

Multimedia and hypertext bundled in to one cool buzzword.

Hypertext

All those blue underlined words all over the Web are Hypertext links. When you click on them they take you somewhere else (to a new document, somewhere else in the current document, etc.)

HTML

HyperText Markup Language. The script in which pages on the World Wide Web are written. For those with long memories it's rather like the dot commands in WordStar or WordPerfect's "reveal codes". HTML source code can be seen (but not edited) by choosing View Source from the menus on your browser.

HTTP

HyperText Transport Protocol. So that's what that "http://" is all about! HTTP is the protocol that the servers and the clients of the Internet use to transfer WWW hypertext documents all over the Web.

Integrated Services Digital Network (ISDN)

Eventually, this communications standard allowing transfer of voice and digital network services will replace our current phone system. If you really want to speed up your Internet access, but can't afford a T1, ISDN is the way to go. You'll transfer up to 128,000 bits-persecond. Commonly used by print bureaux.

Internet

The public "network of networks" which spans the world and can be accessed through dial-up connections or direct, high-speed links (such as provided by JANET. The Internet and its electronic protocol, TCP/IP carries several services

including, the World Wide Web, E-mail, FTP, Gopher and newsgroups.

Internet Service Provider (ISP)

The ISP provides the connections, routers, etc. and then customers pay them a fee for the right to access the Internet through their network, very often by dial-up modem access. Some ISP's don't provide access to the Internet, but they help companies build an Internet presence through Web site design and maintenance.

Internet Relay Chat (IRC)

IRC allows you to communicate in chat rooms with other users. Everything is in real time and only limited by your typing skills and the rules of the room. The room operator can boot you if you step out of line, so be good. Anyone who has watched MTV lately can tell you that IRC chat has received the official "hip and cool" stamp of approval.

Intranet

A private, internal network based around Internet and WWW technology but closed to the outside world except through a controlled gateway.

IMHO

Acronym for "In My Humble Opinion". Generally seen in IRC, E-mail, or Usenet postings.

ΙP

Internet Protocol. This is what allows the many computers on the Internet to communicate across the various networks and different operating systems. It is the common denominator in a generally non-standardized and diverse world.

IP Address

This is the equivalent of the telephone number of your favorite Internet destination. Fortunately, most sites and servers also have a domain name, which is usually easier to remember. For example, when you type http://www.stir.ac.uk you are using HyperText Transfer Protocol to "dial" the IP address (139.153.13.20) of

Glossary of Internet terms

www.stir.ac.uk by typing in its domain name. Every IP address is unique.

ISDN

See Integrated Services Digital Network.

J

Java

A computer programming language which can run on most modern platforms and is based around C++. Often used to add functionality to WWW pages.

JANET

The Joint Academic Network is that part of the Internet which connects up all the UK universities and research centres. It is funded by the JISC, the Joint Information Systems Committee, itself funded by the four UK university funding councils.

JPEG

An extremely popular image compression format developed by the Joint Photographic Experts Group. JPEG works best with full-color photo images, often scanned into digital format. GIF is still the compression format of choice for graphics with few colours or simple design.

K

K

Kilo, as in kilobyte. Often thought to be 1,000, especially in job adverts. But actually in computers it's 2 to the power of 10, which is 1024.

L

LAN

Local Area Networks are common in most all businesses and universities. They allow users to easily send E-mail, access large company databases, and share files and printers. Most LANs also have an Internet connection so users can access resources outside the LAN.

Leased Line

A leased line refers to a dedicated line used exclusively to connect a remote user to a network. Most UK universities are connected to the Internet by leased line.

Listserv

A type of automated mail distribution system, Listservs allow you to subscribe automatically to a mailing list and receive E-mail about specific topics. To subscribe to these groups, you typically send E-mail to the Listserver and say something like "SUBSCRIBE" in the body or subject of the message. A computer will interpret your E-mail, and add you to the periodic mailing list. See also Mailbase.

Lurking

When you are there in the cyber shadows of a mailing list or an IRC channel "listening" or reading but not talking or writing, you are lurking. It's probably a good idea to lurk for a little while to get the feel of the way things work. The same concept applies to Discussion Groups, where it's a good idea to read the FAQ and the current posts before leaving your own.

М

M

Mega as in megabyte. Often thought to be 1,000,000 or 1,000K. But actually in computers it's 2 to the power of 20, which is 1,048,576.

Mailbase

A type of automated mail distribution system run in the UK, Mailbase allows you to subscribe automatically to a mailing list and receive E-mail about specific topics. To subscribe to these groups, you typically send E-mail to the Mailbase server with the message "join .<name of the list>" in the body of the message. A computer will interpret your E-mail, and add you to the mailing list. See also Listserv.

Mailing List

Just like snail mail mailing lists, but using your E-mail address. You can request to join mailing lists to be notified, for example, when a particular Web site has been updated. Listservs and Mailbase are also common examples of mailing lists.

Memory

Also known as RAM – random access memory. The part of the computer where information and programs are kept when they are being used, i.e. when the machine is switched on. Anything in RAM is lost when the machine is switched off. Not to be confused with storage.

MIME Encoding

Multipurpose Internet Mail Extensions. An encoding standard for that allows non-text files like graphics, sound clips, etc., to be attached to regular text E-mail. Your E-mail program will encode these binary files and change them into text files. When the E-mail is sent, your program notifies the recipient program of the MIME encoding standard used, and in effect sends instructions as to how to put the file back into its original form.

Mirror Site

Mirror sites come into play when a particular Web or FTP sites becomes extremely popular. When the site is so popular that it puts particular strain on the server, often the site providers will put the same information and content on another server, and create a "mirror site" to accommodate more users.

Modem

Short for "MOdulator, DEModulator", modems convert digital data into analog wave forms that can be transmitted over current, non-digital phone lines. They let your computer communicate and share info with other computers on the Net.

Mosaic

The original graphical Internet browser. The National Super Computer Association (NCSA) invented Mosaic, and it was the Web's early standard.

Netscape Navigator was developed by some of the original members of the Mosaic development team.

Ν

Netiquette

Being nice and polite on the Net. Actually, just not being a complete boor will do.

Netizen

A member of the global Net community. Just like citizens, netizens have rights AND responsibilities.

Netscape Navigator

The successor to Mosaic as the most popular and well-known browser on the Web. Often referred to as 'Netscape', though that's actually the name of the company. The program is Navigator.

Network

A number of computers linked together and sharing resources.

Network PC

A computer designed to run Java applications directly from the network, but without storing data locally.

Newsgroup

The name for discussion groups on Usenet. Newsgroups are basically distributed bulletin boards about particular topics and interests.

NIC

An acronym for Networked Information Centre that applies to any office that handles info for a network. The big and famous one that handles the administrative needs of the Internet is the InterNIC, which is where new domain names are registered.

NNTP

Network News Transfer Protocol. Just like HTTP, but for newsgroups.

Node

A node is any computer connected to the Internet.

0

OpenDoc

Component technology developed by IBM, Apple and others which is now being hooked up to Java to provide a cross-platform component technology.

Open Systems Interconnection (OSI)

A suite of protocols, designed by ISO committees to be the international standard computer network architecture.

Operating System (OS)

The basic software that makes all the hardware on the computer know what to do with itself. Examples are MacOS, UNIX, Windows NT, and MS-DOS. See also GUI.

OSI

See Open System Interconnection.

P

Packet

A chunk in which data is sent over a network. Packets generally include data along with information such as delivery address. A typical Web page is sent using several packets, not all of which necessarily arrive at the same time.

Packet Internet Gopher (PING)

PINGing someone is the easiest way to test an Internet connection. Using appropriate software you send out an electronic PING and wait for the PONG echo. This will tell you the speed of the network connection and ensure you that you've configured you Internet machine correctly.

Password Authentication Protocol (PAP)

A way of showing ID to your ISP when you log in. By providing a user name and a password you are granted access to your ISP's network and connection to the Internet. Many scripting utilities are available so that you don't need to type your username and password at a terminal window each time you log in.

Patch

A patch is a new piece of code for a program that a developer releases after the program has already hit the market. Patches either fix bugs or add new features. Programs are patched using special software, often with appropriate names like 'Stitcher'.

Point-to-Point Protocol (PPP)

PPP is the most popular method for dialup connections over the Internet. This protocol allows for packet transmission over serial point-to-point links.

POP

Post Office Protocol. Designed to let you pull your E-mail off the server. As a client, E-mail sent to you is stored on the server where you have an account until you "get it" using your mail application. The POP is the protocol that the client and the server agree upon to allow the transfer of E-mail files.

Posting

Sending a message to a BBS or Discussion Group, or submitting an article to a Usenet newsgroup.

PPP

See Point-to-Point Protocol.

Protocol

The solution to the digital tower of Babel, a protocol is a common set of rules and "language" agreed upon by networked computers to allow communication. With so many different types of computers and operating systems on the Internet, agreed-upon protocols are a must.

R

Router

A computer whose only mission in life is to act like a very speedy post clerk, looking at IP addresses on packets, and speeding them along to the right destinations.

RTDF

An acronym (Read the dammed FAQ) you might get if your post in a Discussion Group has been thoroughly hashed to

death in the recent past by the members of the group.

RTFM

An acronym (Read the F*&!ing Manual) you might see if you ask a really dumb question in a discussion group. Compare to RTDF.

S

Server

The opposite of a client, a server is a computer on the Internet, or on any network, that provides resources.

Service Provider

See Internet Service Provider.

Signature

This is the electronic text you "sign" E-mail with. Usually includes full name, address, E-mail, telephone. Most E-mail programs will let you automatically brand each piece of outgoing mail with your signature.

SMTP

Simple Mail Transfer Protocol. The equivalent of POP, but used between servers. A server exchanges mail with another using SMTP, then you grab your E-mail from the server using POP.

SLIP

Serial Line Internet Protocol. Similar to PPP, but not quite as good. SLIP is an Internet protocol for dial-up connections.

Spamming

Sending out unwanted E-mail to a large mailing list. Infamous spammers are sleazy marketers trying to hawk us their junk anyway they can. Flaming spams may not be the best response (even if you feel like it), since this may just create more 'junk' mail. Best action is usually to delete the message without reading it assuming you can tell from the header what it is!

Storage

The generic term for all the different places information and programs are kept so that they are stored and retained

the program is quit. Originally referred to magnetic tape (now available in cartridge form) but now also includes floppy disk, hard disk, CD-ROM, optical disks and various kinds of removable disk such and Syquest, Zip and Jaz. Although data are not lost in storage when the computer is turned off, all forms of storage are liable to corruption – CD-ROM and tape are most reliable, floppy disk is least reliable. Therefore always make copies - backups - of data and programs in storage.

even if the computer is switched off or

T

Telnet

A program that lets you access remote computers on the Net. When you telnet to another computer, you usually come to a "log in" prompt. One common use for Telnet in the UK is access to the On-line Public Access catalogues (OPACS) most university libraries operate.

TCP/IP

Transmission Control Protocol/Internet Protocol. This is the big set of "common denominator" protocols, or rules, used on the Internet to allow computers to communicate. TCP/IP exists for all operating systems.

U

UNIX

An extremely powerful and versatile operating system designed specifically for use on networks. It is therefore ideal for the Web, and many servers run Unix operating systems. It has built-in TCP/IP.

URL

An acronym for Uniform Resource Locator, a URL is the standard way to give a resource address on the Web. For example, http://www.stir.ac.uk/socinfo

Usenet

A system of thousands of distributed discussion groups like BBSs, that you can subscribe to. To read newsgroups you use a Usenet newsreader or the one built in to Navigator.

168

Glossary of Internet terms

٧

Veronica

A search engine that is used to search Gopher materials. It allows searches of all gopher sites for files, directories and other resources.

W

Webmaster

The Webmaster is the person in charge of maintaining and updating a Web site. If you find links that don't work or have other technical problems, send E-mail to the Webmaster.

Wide Area Information Service (WAIS)

A search engine that lets you input keywords. It then searches its index and

returns you the search results ranked and scored according to relevancy.

WHOIS

A program where you provide a Domain Name, and WHOIS returns information about the provider of the site. (i.e. name, company, address, phone number, and E-mail)

World Wide Web (WWW or W3)

The Web is a linking of HTML coded pages, or sites, that let you hop about by simply pointing and clicking. You use your browser to access pages, and the server that site is stored on then sends you the HTML source code (which your browser interprets) through HTTP.

SocInfo Guide to IT Resources On-line

From April 1997, the contents of this guide, including extra sections, will be available on the WWW. Future editions will be available this way.

The URL is: http://www.stir.ac.uk/socinfo/pubs/softcat.html

UK CAL initiatives

CTI

The Computers in Teaching Initiative. Mission: to maintain and enhance the quality of learning and increase the effectiveness of teaching through the application of appropriate learning technologies. Has a network of 24 subject-based centres. Produces *Active Learning*, a refereed journal of the CTI, emphasizing learning outcomes rather than enabling technologies. Free to all academic staff of publicly funded HE institutions.

CTI Support Service, University of Oxford, 13 Banbury Road, Oxford OX2 6NN Tel. +44 (0)1865 273273 Fax. +44 (0)1865 273275 E-Mail CTISS@oucs.ox.ac.uk http://www.cti.ac.uk/

FDTL

The Fund for the Development of Teaching and Learning is a 3 year project (1996-9, with a second phase, 1997-2000) with funding of £6.3 million for years 1 and 2, and £1.7 million for year 1 of phase 2. It is designed to support projects aimed at stimulating developments in teaching and learning and to encourage the dissemination of good teaching and learning practice across the UK Higher Education sector. Funding is linked to the results of the teaching quality assessment process in that bids can be made only by those institutions that have demonstrated high quality in their educational provision.

http://www.hefce.ac.uk/initiat/current/fdtl.htm

ITTI

The Information Technology Training Initiative (ITTI) comprises a number of projects at British universities which develop products - software, books, training courses and materials - designed to facilitate the professional development of IT service providers, the training of users in the use of IT products and the uptake of Information Technology in the University sector, particularly in the areas of using hypermedia and authoring for courseware development.

Fred Riley, ITTI, Language Centre, University of Hull, HULL HU6 7RX

Tel: +44 (0) 482 466316

E-mail: f.h.riley@ucc.hull.ac.uk

http://www.hull.ac.uk/Hull/ITTI/itti.html

http://www.icbl.hw.ac.uk/itti

JTAP

A new three-year, £6.5M programme commencing in August 1996. It will identify and promote key information technologies. Supports 53 projects in the areas of: tools for collaborative and distance working, technologies to support network-accessible information including visualization and virtual environments, technologies to demonstrate innovative use of IT to support management and infrastructure of HE.

http://www.jtap.ac.uk/

LTDI

The Learning Technology Dissemination Initiative is a project funded by the Scottish Higher Education Funding Council to promote the use of learning technology and computer based learning materials. All of LTDI's services and attendance at LTDI events is free to staff from all SHEFC funded institutions.

Institute for Computer Based Learning , Heriot-Watt University, Riccarton, Edinburgh, EH14 4AS, Scotland. Tel: +44 (0) 131 451 3280 Fax: +44 (0) 131 451 3283 E-mail: ltdi@icbl.hw.ac.uk http://www.icbl.hw.ac.uk/ltdi/

NISS

NISS (National Information Services and Systems) provides a focal point for the UK education and research communities to access information resources worldwide, linking users to a wide range of services on the Internet and other networks.

The aims of this information service are:

- provision and access to selected information
- detailed descriptions in a resource descriptions database
- information resources selected by experts within their subject areas
- information delivered to the desktop
- continued support for existing VT100 and X.25 users
- to be information-driven rather than technology-driven

http://www.niss.ac.uk/

SHEFC MAN

By end of 1995-96 SHEFC will have provided £8.5m, JISC £1m and HE Institutions £1.5m towards the installation and use of Metropolitan Area Networks (MANs) in the Scottish HE sector. The investment has led to the establishment of four MANs across Scotland. All Institutions funded by SHEFC will have a MAN connection and the four MANs will also be interconnected by the end of the academic year 1995-96. The implementation of Metropolitan Area Networks (MANs) will mean that the preparation of, and wide-spread access to multimedia off-line and on-line teaching material will become more of a reality than a pipe dream and so provide a more flexible learning experience for students.

http://www.icbl.hw.ac.uk/ltdi/man-info/index.html

UCoSDA

The Universities' and Colleges' Staff Development Agency (UCoSDA) is a wholly-owned subsidiary of the Committee of Vice-Chancellors and Principals of the Universities of the United Kingdom (CVCP). It is an institutional membership organisation which seeks to provide strategic directions, advice, consultancy, training, and tailored resources to support its member universities and colleges in their planning, organisation, provision and evaluation of continuing professional/vocational development for all personnel.

http://www.niss.ac.uk/education/ucosda.html or http://www.shef.ac.uk/uni/services/ucosda/

TLTP

Teaching and Learning Technology Projects (TLTP). Funded originally under the auspices of the University Funding Council these projects are a combination of single institutions and multi-institutions consortia, aimed at producing courseware for the higher education market. TLTP has now established the Teaching and Learning Technology Support Network (TLTSN). Its 9 support centres act as a front-door for enquiries about integrating technology into teaching and learning.

Contact: Sarah Turpin, TLTP National Co-ordinator, Higher Education Funding Council for England, Northavon House, Coldharbour Lane, Bristol BS16 1QD, UK.

Tel: +44 (0) 272-317481/317454.

The TLTP Phase 1 Catalogue http://www.icbl.hw.ac.uk/tltp/catalogue/phase1/intro.htm

The TLTP Phase 2 Catalogue http://www.icbl.hw.ac.uk/tltp/catalogue/phase2/intro.htm

Apple Education Software Catalogue

This extensive listing of educational software for the Apple family is generally aimed at the schools level and the science and business area of higher education. For copies, contact the supplier:

Apple Computer UK Ltd, 6 Roundwood Avenue, Stockley Park, Uxbridge, UB11 1BB Tel: +44 (0) 171 569 1199

Association for Survey Computing

The Association for Survey Computing has now published its tenth software register since 1973. This is the only comprehensive catalogue of software for statistical analysis and all phases of survey work, detailing the name, facilities, language, appropriate hardware and operating systems, sources and price of each package listed. The information is collated from the returns of questionnaires sent to developers and marketers by the ASC. The present register lists 227 packages of which 71 appear for the first time. Members of the Association receive one catalogue free (four for corporate members). For affiliates of the ASC the cost is also £10 and for non members the cost is £15.

The ASC Secretary, P.O. Box 60, Chesham, Bucks HP5 3QH Tel/Fax: +44 (0) 1494 793033 E-mail: asc@essex.ac.uk

AVP Directory

This directory lists a range of software for education across the curriculum. It maintains a separate section for social studies, with over three hundred programs. However, most of it is aimed towards schools. Nevertheless, some interesting material can be found. For more information, contact:

AVP, School Hill Centre, Chepstow, Gwent NP6 5PH Tel: +44 (0) 1291 625439 Fax: +44 (0) 1291 279671

Blaise

Blaise is The British Library's Automated Information Service, providing access to 22 databases containing over 17 million bibliographic records. Blaise is an on-line information retrieval service that includes access via a new user-friendly graphical

interface on the World Wide Web. A direct on-line link to the British Library Document Supply Centre, the world's leading supplier of documents, allows you to transmit requests for individual items quickly and easily. Blaise Web enables individual users to have quick and easy access to the millions of bibliographic records available for purposes such as subject searching and compiling bibliographies. The link to the Document Supply Centre enables registered individuals to order material directly.

Blaise, National Bibliographic Service, The British Library, Boston Spa, Wetherby, West Yorkshire LS23 7BQ United Kingdom

British Government

The British Government's computer agency, the CCTA, is now on the World Wide Web. The prototype server has been running for a while in Norwich and a public launch is expected at the end of this month. The URL address is:

http://www.open.gov.uk/

British Universities Film and Video Council

The British Universities Film and Video Council (BUFVC) was founded in 1948 to promote the use, production and study of film and related audio-visual media for higher education and research. The Council hosts a specialist library, maintains a large database called AVANCE and is one of the leading sources of information supporting the use of non-fiction archive film and television in the UK. In addition, the Council provides an invaluable 'off-air recording backup' system enables educators to obtain copies of programmes missed, distributes films and videos and produces regular publications.

BUFVC, 55, Greek Street, London. W1V 5LR Tel: +44 (0) 171 734 3687 Fax: +44 (0) 171 287 3914 E-mail BUFVC@Open.ac.uk

CAQDAS

The computer assistance for qualitative data analysis project. Project staff and visiting lecturers provide an overview of the generic types of qualitative packages, interactive coding exercises, sessions on user experiences together with demonstrations and in-depth introduction to at least three qualitative data analysis packages. Participants will be given hands-on experience in these packages. For further information, contact:

CAQDAS, Dept. of Sociology, University of Surrey, Guildford GU2 5XH
Tel: +44 (0) 1483 259455
E-mail: ann@soc.surrey.ac.uk
http://www.soc.surrey.ac.uk/caqdas/index.html

CHEST

Combined Higher Education Software Team. The CHEST project is a National Computer Board Initiative set up to support computing in higher education and the

research community. It aims to make good quality software affordable to members of the academic research and teaching community. It achieves this objective by negotiating discounted prices with software suppliers, arranging central funding for some software purchases and organizing suitable software licence agreements.

The CHEST directory with over 800 software packages, is held on-line. The directory is also published in paperback by Bath University Press annually.

Data and Program Library Service (DPLS)

The Data and Program Library Service was founded in 1966 to provide access to machine readable data files to the social science community of the University of Wisconsin-Madison campus and to disseminate locally-generated files to scholars at other institutions. The web site lists references to the useful Archival Data Online Repository in the Social Sciences and the most Frequently Asked Questions (FAQs). In addition, links to other aids for using SAS and SPSS to analyse data can be found. For further information, contact:

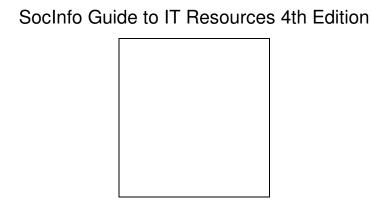

Data & Program Library Serv, 3308 Social Sc Building, 1180 Observatory Drive, Madison WI 53706 http://dpls.dacc.wisc.edu/

Data Archive at Essex University

The Data Archive at the University of Essex houses the largest collection of accessible computer-readable data in the social sciences and humanities in the United Kingdom. It is a national resource centre, disseminating data throughout the United Kingdom and, by arrangement with other national archives, internationally. Founded in 1967, it now houses approximately 4,500 datasets of interest to researchers in all sectors and from many different disciplines. In addition to British cross-sectional studies from academic, government, and commercial sources, the Archive holds time series data, major longitudinal studies, panel surveys, and major cross-national studies. The Data Archive Bulletin and BIRON, an on-line database, are available through the Archive.

Article by Bridget Winstanley in SocInfo Newsletter 14.

Directory of Software Sources for Higher Education

This directory describes sources of software, reviews, evaluations and other important information about software that cuts across all discipline areas in higher education. There are over 400 listings, indexed by title, subject and name of organization. The directory is complied by P. Seiden at the Educational Software Library at Carnegie Mellon University. Contact the suppliers at:

Peterson's Guides, 166 Bunn Drive, PO Box 2123, Princeton, NJ 08540-2123 USA
Price: Available upon request
Tel: +1 609 395 0676

ECPR Standing Group: Computer Users in Political Science

A former Newsletter for this group, produced by Richard Kimber in Keele, and the Political Data Newsletter formerly produced in Bergen, have now been subsumed into the current ECPR Newsletter. A gopher server may be reached at SPOSUN.2.UNIGE.CH. All past members and any readers interested in joining are also invited to communicate directly with one of us at the E-mail addresses shown below. Comments and suggestions are welcome from all former or intending members of the Standing Group.

Alan Brier: E-mail: apb@uk.ac.soton.mail Eugene Horber: horber@uni2a.unige.ch

EDUCOM

A nonprofit consortium of over 600 Higher Education institutions, mainly in the US, that facilitates the introduction, use, and access to and management of information resources in teaching, learning, scholarship, and research. Members are kept up-to-date on the latest developments in academic computing and information technology through Educom publications, programmes and projects. In addition, members receive discounts on conferences, seminars, books, consulting and selected offerings from Corporate Associates.

1112 16th Street, NW, Washington, DC 20036. Tel: +1 202 872-4200 Fax +1 202 872-4318. http://educom.edu/

ERIC

Educational Resources Information Center (ERIC) is a network of clearinghouses, each one is dedicated to one particular area of education. It is principally a US organisation, but there are many other regional ERIC collections which feed into the main databases. Abstracts from these may be interrogated on-line from many institutions throughout the world. Compatible systems are any IBM PC/ Apple Macintosh. There is a charge for on-line services, for these and details of CD-ROM prices, contact:

ERIC Clearinghouse on Higher Education, George Washington University,
1 Dupont Circle NW, #630, Washington DC 20036-1183 USA
AskERIC is the Internet-based education information service of the ERIC System,
headquartered at the ERIC Clearinghouse on Information & Technology at Syracuse
University.

HENSA (National Public Domain Software Archive)

This and the SunSite Europe (see page 181) are the places to go to get free and shareware software. The HENSA/Micros archive is based at the University of Lancaster. The archive supports users of microcomputers with freely available software. The microcomputers currently supported are: Commodore Amiga, Acorn Archimedes, Atari ST, PC compatibles (including Windows 3.1 95 and NT) and Macintosh

http://micros.hensa.ac.uk/

The HENSA/Unix archive is based at the University of Kent at Canterbury. The archive supports users of computers running the Unix operating system, (and variants), with freely available software.

http://unix.hensa.ac.uk/

Highways for Learning

An NCET publication on the potential of the Internet in education available in text form on NCET's World Wide Web Server A new 70 page handbook entitled Running a World

Wide Web Service has just been released, funded by the Support Initiative for Multimedia Applications (SIMA) and is now available to subscribers of the SIMA reports who will receive approximately 15 reports at a cost of £50.

Contact: Anne Mumford: A.M.Mumford@lut.ac.uk http://ncet.csv.warwick.ac.uk/index.html

ICPSR

The Inter-university Consortium for Political and Social Research, located within the Institute for Social Research at the University of Michigan, is a membership-based, not-for-profit organization serving member colleges and universities in the United States and abroad. ICPSR provides:

- Access to the world's largest archive of computerized social science data.
- Training facilities for the study of quantitative social analysis techniques.
- Resources for social scientists using advanced computer technologies.

http://www.icpsr.umich.edu

iec ProGAMMA

iec ProGAMMA (Interuniversity Expertise Centre, Netherlands) has been set up to stimulate the development and distribution of innovative computer applications in the social and behavioural sciences in Europe. It maintains an international distribution and marketing network for scientific software. The centre aims to establish an international network for the worldwide exchange of scientific knowledge and use of software applications. ProGAMMA maintains an On-Line Catalogue of Software and Books and a searchable database of software, SIByl (The Social Science Software Information Bank). Each entry in SIByl includes a functional description of the software, technical and data requirements, prices, availability of manual and interface, literature references, and purchase addresses.

iec ProGAMMA, Grote Rozenstraat 15, PO Box 841, 9700 AV Groningen, Netherlands Tel. +31 50 363 6900 Fax. +31 50 363 6687 E-mail gamma.post@gamma.rug.nl http://www.gamma.rug.nl

ISAAC

ISAAC (Information System for Advanced Academic Computing) is an IBM supported electronic bulletin board that enables users from across the USA to exchange information. The bulletin board contains a number of interesting files on instructional software applications. The database in ISAAC has been revamped and make it easier to download information and to exchange views with other interested parties.

telnet://isaac.engr.washington.edu
JANET users may connect to ISAAC only after obtaining the appropriate permissions
and passwords. For more details, contact:
ISAAC Administration, University of Washington, Seattle WA 98191, USA
isaac@isaac.engr.washington.edu

Koch Media Ltd

Produces Bites, a catalogue of CD-ROMs and CD-ROM technology.

24 Concord Road London. W3 0TH Sales and support: East Street, Farnham, Surrey. GU9 7XX Tel. +44 (0) 1252 714340 Fax. +44 (0) 1252 711121

MacSupporters

This group felt that regular dialogue between support staff at all UK institution sites was important and that this should take the form of a rapid and accurate support service. The MacSupporters Group is recognised as a special interest group of the Apple University Consortium in the UK. With support from the EMAP Online Media Centre it is accessible on the WWW: http://macsupporters.emap.co.uk/MacSupporters/ It also runs a Mailbase list. To subscribe, send an introductory E-mail message to:

mac-supporters-request@mailbase.ac.uk

Thereafter, messages should be sent to: mac-supporters@mailbase.ac.uk

Microinfo Ltd

All CD-ROMs listed in the Microinfo CD-ROM Catalogue are available from Microinfo either as a result of formal agreements between the publishers and Microinfo, or through other authorizing arrangements. Many titles, including those from several United States Government agencies, are uniquely available from Microinfo in the UK. Microinfo also offers a full range of client support and telephone HELP. The Catalogue is republished four times per year and addendum sheets are issued frequently between publication dates.

> Microinfo Ltd, PO Box 3, Omega Park, ALTON Hants GU34 2PG Tel: +44 (0) 420 86848 Fax: +44 (0) 420 89889

NCET (National Council for Educational Technology)

The NCET produce a software directory, primarily for schools but the range is extensive and there occasional overlaps with the tertiary sector of education. It is a useful source of reference, for ideas, if not products. For more details, contact:

NCET, Milburn Hill Road, Science Park, University of Warwick, Coventry CV4 7JJ Tel: +44 (0)1203 416994 Fax: +44 (0)1203 411418 http://www.ncet.org.uk/

NERIS

NERIS (National Educational Resources Information Service) maintain a database of curriculum information, case studies, teaching and learning resources. There is an emphasis on primary and secondary education, but the target audience is actually secondary and undergraduate levels. Information is organised by subject, media and level of educational application. It can be accessed on-line/from a CD-ROM/as a software database. It is compatible with IBM PC/Clones and Apple Macintoshes. For more details, contact:

> The NERIS Information Officer, Maryland College, Leighton Street, Woburn, MK17 9JD

Portico

The British Library's Online Information Server. Portico provides access to information about all aspects of the services and collections of the United Kingdom's national library.

http://icarus.bl.uk/

Qualidata

Qualitative Data Archival Research Centre. This is a clearing house for qualitative data. It advises researchers on archiving of qualitative data and promotes and encourages archiving.

Louise Corti, Senior Administrator Qualidata, Dept. of Sociology, University of Essex, Wivenhoe Park, Colchester, Essex. CO4 3SQ Tel. +44 (0) 1206 873058 Fax. +44 (0) 1206 873410 E-mail cortl@essex.ac.uk http://www.essex.ac.uk/qualidata/

SRM-Site

A new project of the SRM-Documentation Centre of the Erasmus University, Rotterdam. All kinds of information will be gathered, selected and registered as far as it is relevant for methodologists, students and social researchers in practice. Besides primary information, the SRM-Site will supply a collection of pointers to other electronic information resources in the field of social research, methodology and statistics.

SRM-Documentation Centre, Erasmus University, Rotterdam, P.O. Box 1738, 3000 DR Rotterdam. The Netherlands. http://www.eur.nl/ub/srm

Statewatch

Statewatch is a comprehensive bulletin and on-line information service about a range of civil liberties' issues. It is produced by a group of journalists, researchers, lawyers and community activists. For details of rates and subscriptions, contact:

Statewatch, PO Box 1516, London N16 OEW Tel: +44 (0) 181 802 1882 Fax: +44 (0) 181 880 1727 E-Mail: GEO2:Statewatch-Off http://www.poptel.org.uk/statewatch/swhp.html

SunSite Europe (Imperial College)

Over 80 gigabytes of filespace packed with useful software and information. also offers a wide range of services and ways to access this archive. This is the major UK source for software. Look here for most freeware and shareware. Good support for Mac and UNIX too. Latest version of e.g. Netscape Navigator here.

http://src.doc.ic.ac.uk/

The Academic Advisor

This software catalogue is published at the start of each academic term by a commercial company in association with CHEST It contains general and specific information on hardware, software, computer supplies, educational dealers and CHEST directory updates For price and other details, contact:

Academic Advice Ltd, 3 The Parade, Mulfords Hill, Tadley, Berkshire RG26 6HZ Tel: +44 (0) 1734 811100 Fax: +44 (0) 1734 811166

The Open Information Interchange Technology

Handbook

A handbook about all the various standards defining multimedia data of various sorts. Covers e.g. TIFF, GIF, HPGL, JPEG, MPEG, OpenDoc, OLE, SGML, ODA, DSSSL, PostScript, HTML, HyTime, MHEG, etc.

Published by Technology Appraisals, 82, Hampton Road, Twickenham, TW2 5QS UK
Price £49.50 plus £5.00 postage and packing.

Software review panel

SocInfo often gets sent copies of software and demonstrations to review. The Centre has a panel of academics in sociology, politics and social policy who review them. The reviews are published in the regular newsletter, and are the basis of many of the entries in this Guide. If you would like to join the panel please photocopy this page, complete the details and send to the address below.

Subscriptions

SocInfo Journal

Once a year the Centre publishes the SocInfo Journal which contains articles about IT in teaching sociology, politics and social policy and discussions about issues of implementation, pedagogy and economics as they relate to IT in teaching. All university departments covered by the remit of SocInfo will automatically receive one free copy of the Journal. Further copies can be obtained from the Centre for £5 each.

The SocInfo Guide to IT Resources 4th Edition

All university departments covered by the remit of SocInfo will automatically receive one free copy of this Software Guide. There is however, a small fee for academics who would like individual copies (£10); non-academics and personnel in other institutions (£15). For prices on multiple copies and overseas subscriptions, please contact the Centre directly for more information. All charges include p&p.
