Andrew Taylor: design research

Andrew Taylor is a senior lecturer, designer and researcher; at the School of Art, Design & Architecture, University of Huddersfield.

Andrew's research is integral to his design practice, and his current work is focused on applying experimental approaches by using traditional & digital 2D and 3D virtual interactive tools to develop innovative methods in art and design production.

:2D, digital, 3D CG and CAD, virtual 3D interactive technologies:

Thinking, drawing & 3D technologies

Preparing learners for the future ?

http://extraordinary-3d-materials.blogspot.com/2011_02_12_archive.html

- The following research questions can be explored:
 -
 - • What value can 3D CG software and virtual technologies add to your new or traditional subject methods and what evidence exists to support their use in the concept and production of the future?
 -
 - • What resources and teaching and learning approaches are needed to make the best use of 3D and virtual technologies
 -
 - what evidence exists to support such approaches in your educational experience and/or professional practice?
 -
 - • What frameworks and innovative methods can be developed to support effective, engaging and transformative usage of 3D technologies in your specialism

PDI/Dreamworks was able to do much more with cloth simulation in Shrek the Third both due to software and processing improvements. ClothNew wardrobe and advancements in Cloth simulation technology make it possible for main characters to be build with more layered decorative costumes utilizing Maya Cloth. (Sourced, 2011. from <http://www.fxguide.com>)

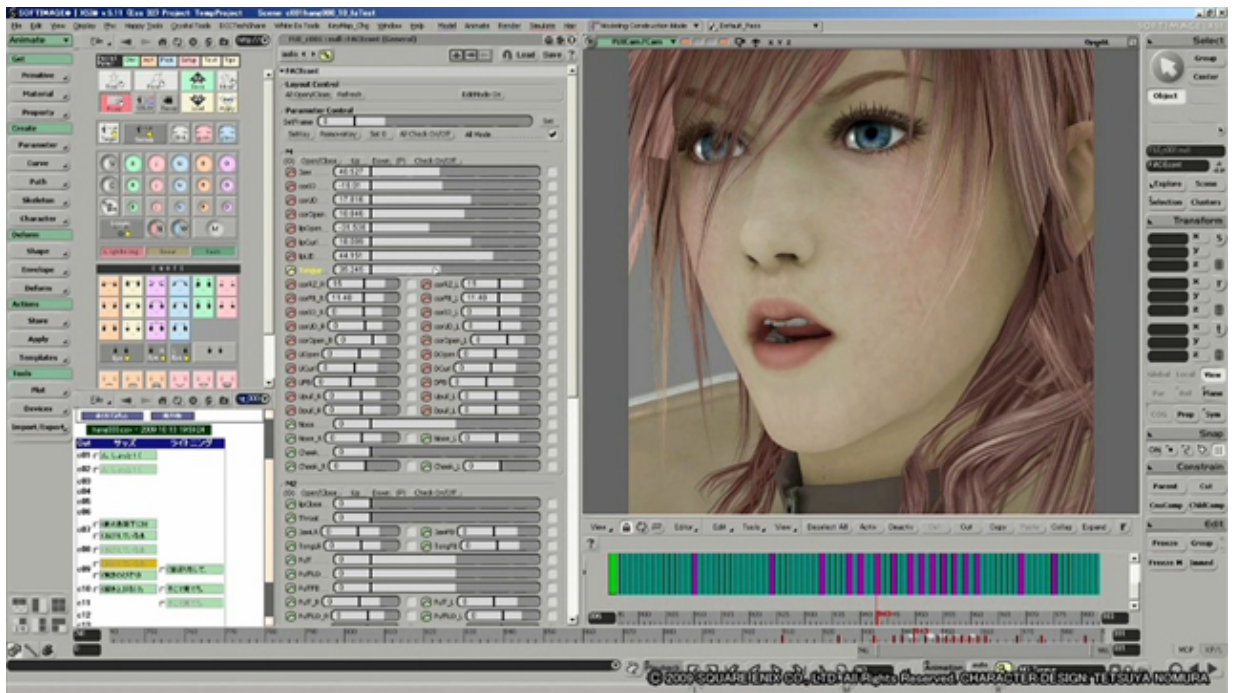

Clothing software for game development:

Havok Cloth was introduced to add cloth simulation capabilities (both character clothing and environmental cloth) in 2008 to the original Havok Physics suite. Cloth can be authored via Havok Cloth Tools plug-ins for popular modelling packages and is optimized for PC, Mac, Xbox 360, PS3 and Wii platforms.

This video shows University of Huddersfield, Creative Arts Building interactive game environment development for a single user operating as virtual character and driving around campus in a Car. Huddersfield 3D ADA researchers modelled the buildings from architect plans and satellite maps in 3DS Max. Using 3DVIA Virtools technology the team added movement and single user game functionality for the character, sliding doors, lift moving up to floor above and a drivable car with a camera.

This University of Huddersfield T&L funded research has developed interactive real-time applications for future educational multiuser teaching and learning game environments. This collaborative interdisciplinary project includes real-time complex interactivity, character operation and 'live' environmental physics effects within a online realistic game experience for teaching, learning, research and marketing.

Please visit www.huddersfield3d.co.uk. For further interactive and 3D research projects.

University research funded project developed a interactive multi user online Virtual 3D Workshop. The huddersfield 3D researchers from ADA developed this interactive real time educational game, modelling buildings, rooms, and machines exactly from plans and photos recorded in the real life workshops, and modelled using 3DS Max and adding interactivity in game engine development software Virtools. This project aimed to enhance the students, technical staff and academics experience of learning and remembering real 'live' health and safety workshop information through participating online in collaborative game based activities.

Image of Ay Taov from inside Second Life - Andrew Taylor's Second Life research avatar. Ay Taov explored Second Life extensively and was 'virtual researcher' on several research projects aimed at investigating the potential for fashion students and academics in using 3D virtual worlds for teaching and learning in fashion education.

Learn : Analysis the information you've collected to identify patterns and insights.	Look : Observe people to discover what they do rather than what they say they do.	Ask : Enlist people's participation to elicit information relevant to your project.	Try : Create simulations to help empathize with people and to evaluate proposed designs.

Draw the Experience

HOW: Ask participants to visualize an experience through drawings and diagrams.

WHY: This can be a good way to debunk assumptions and reveal how people conceive of and order their experiences or activities.

By asking people to "draw your money," the IDEO team designing an online bank was able to discern people's attitudes towards their finances.

VACATION MEMORABILIA

IN NEED OF further improvement & landscaping

How your money...

week books

Cognitive Maps

HOW: Ask participants to map an existing or virtual space and show how they navigate it.

WHY: This is a useful way to discover the significant elements, pathways, and other spatial behavior associated with a real or virtual environment.

Mapping how they occupy or pass through different zones of the city, the IDEO team asked bike messengers to indicate where water oases are located and how they reach them.
